EDUCATION (SCIENCE AND ART):

[c. 7337.] Forty-first Report of the Department of Science and Art of the Committee of Council on Education, with Appendices. p. 1

[c. 7337-I.] Supplement, Drawing and Manual Instruction in Elementary Schools, during the Year ended 31st August 1893. 443

FORTY-FIRST REPORT

OF THE

DEPARTMENT OF SCIENCE AND ART

OF THE

COMMITTEE OF COUNCIL ON EDUCATION,

WITH

APPENDICES.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY EYRE AND SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, EAST HARDING STREET, FLEET STREET, E.C., and
32, ABINGDON STREET, WESTMINSTER, S.W.; or
JOHN MENZIES & Co., 12, HANOVER STREET, EDINBURGH, and
90, WEST NILE STREET, GLASGOW; or
HODGES, FIGGIS, & Co., LIMITED, 104, GRAFTON STREET, DUBLIN.

1894.

[C.—7337.]

The annual publications of the Department consist of—

(1.) The Directory, or Code of rules, for establishing and conducting Science and Art Schools and Classes. Price of 1894 issue, 6*d*.

(2.) The Calendar, History, and General Summary of Regulations, which gives a history and general description of the Department, with a summary of the rules and a list of the Science and Art Schools and Classes, &c. Price of 1894 issue, 2*s*. 3*d*.

(3.) The Annual Report, which gives full information as to the operations of the Department during the past year. Price of present issue, 1*s*. 9*d*.

(4.) Drawing and Manual Instruction in Elementary Schools. Supplement to the Annual Report, giving the details with regard to Drawing and Manual Instruction in Elementary Schools during the past year. Price of 1894 issue (covering year ended 31st August 1893), 1*s*. 6*d*.

(5.) Abstract of Returns furnished to the Department as to the Application of Funds under the Local Taxation (Customs and Excise) Act, 1890, and the Technical Instruction Acts, &c. for the purposes of Science, Art, Technical, and Manual Instruction in England, Wales, and Scotland. Price of 1893 issue, 8½*d*.

APPENDIX A.—MINUTES, CORRESPONDENCE, AND REPORTS.

Minutes :	
List of Technical Instruction Subjects sanctioned	1
Local Authorities for which special Technical Instruction Subjects were sanctioned in 1893–4	3
Schools transferred to local authorities under Schools for Science and Art Act, 1891	5
Honours Examination in Machine Construction and Drawing, Building Construction and Naval Architecture	5
Grants for Drawing in Evening Continuation Schools in England, Wales, and Scotland	5
Correspondence :	
Proposed reform in time reckoning	9
Reports :	
Extracts from Reports of Inspectors of Science and Art Schools :	
Mr. Barwell's	10
Mr. Redgrave's	10
Mr. Buckmaster's	11

APPENDIX B.—SCIENCE AND ART INSTRUCTION.

1. Tables of Results of Examinations in Science in 1892 and 1893 :	
A.—General Statistics of Science Schools Examinations	13
B.—Successes and Failures in each Stage of each Subject	15

Page

C.—Per-centages of Successes and Failures in each Stage of each Subject - 19
D.—Results of the Training College Examinations - 23
E.—Training Colleges. Details of Successes and Failures in each Subject - 24
F.—Training Colleges. Per-centages of Successes and Failures in each Subject - 27

2. Tables of Results of Examinations in Art in 1892 and 1893:
A.—Statistics of Examinations in Schools and Classes - 30
B.—Successes and Failures in each subject - 32
C.—Per-centages of Successes and Failures in each subject - 34
D.—Training Colleges. General Statistics of Examinations in Drawing, 1892-93 - 36
E.—Training Colleges. Successes and Failures in each subject - 37
F.—Training Colleges. Per-centages of Successes and Failures in each subject - 38

3. Schools and Classes (Science and Art) showing Number of Students under Instruction, with Prizes, Fees received, and grants made - 40
4. Organised Science Schools approved for the Session 1892–93 - 173
5. Results in Schools of Science and Art in the Colonies and Dependencies - 175
6. Names of Residential and Day Training Colleges, the number of Students examined, and the payments on Results for Science and Art - 176
7. Aid sanctioned towards purchase of Apparatus and Examples and providing Fittings for Science and Art Schools and Classes - 178
8. Total amount of Aid granted to Training Colleges and Schools and Classes of Science and Art - 181
9. Number of Persons receiving instruction in Science and in Art and Elementary Drawing and Manual Instruction (1884-93) - 182
10. Examinations on the results of which Certificates only have been awarded - 183
11. Local Scholarships and Exhibitions granted for the year 1893–94 - 186
12. Gold Medallists in the National Competition 1893 - 189
13. Drawing and Manual Instruction in Elementary Schools - 190
14. Results of the Examination of Schools of Art throughout the United Kingdom - 192
15. Report of Registrar of National Art Training School - 213

APPENDIX C.

Royal College of Science, London. (Thirteenth Annual Report) - 215

APPENDIX D.—SOUTH KENSINGTON MUSEUM.

Art Museum Returns:
(1.) Contributors of Loans to Art Museum - 227
(2.) Contributors who withdrew their Loans - 228
(3.) Donations and Bequests to the Art Museum - 228
(4.) Abstract of Objects acquired by purchase or gift - 229
(5.) Abstract of Cost of Objects purchased for Art Collections 230

Report to Solar Physics Committee by Professor J. Norman Lockyer, C.B., F.R.S. - - - - - - - - - 327

FORTY-FIRST REPORT

OF THE

DEPARTMENT OF SCIENCE AND ART

OF THE

COMMITTEE OF COUNCIL ON EDUCATION.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

WE, the Lords of the Committee of Your Majesty's Privy Council on Education, humbly present to Your Majesty this our Report of the Department of Science and Art for the year 1893.

The Report is arranged under the following heads :— Division of Report.

I.—Instruction in Science.

II.—Instruction in Art.

III.—The South Kensington Museum, with the Branch Museum at Bethnal Green, and the circulation of objects of Science and Art to all parts of the United Kingdom.

IV.—Other Museums, in connexion with the Department of Science and Art, supported by the State.

V.—The Geological Survey of the United Kingdom, the Committee on Solar Physics, and the Royal Hibernian Academy.

VI.—Technical Education.

VII.—Developments bearing on Science Instruction proposed or in operation.

VIII.—Expenditure of Department.

The Calendar of the Department for the year 1894, which contains a brief historical account of its various branches with a summary of the rules, a list of the Schools, and general statistical and other information, was presented to both Houses of Parliament by command of Your Majesty and published at the commencement of the present year. This Report deals only with the work of the Department during the past year. Calendar.

I.—SCIENCE DIVISION.

Aid given towards the Promotion of Instruction in Science.

(*a.*) *Science Schools.*

Elementary Scientific Instruction.

1. The subjoined table gives the number of Schools, Classes, and Pupils under instruction in Science from 1884 to 1893. Each institution in which Instruction was given in Science is counted in this table as a Science School, whether it consisted of Classes in several branches of Science or only of one Class. It will be seen that during the decennial period the number of Schools has nearly doubled, the number of Classes has more than doubled, and the number of pupils under instruction has also more than doubled. As compared with the previous year the number of Schools had in 1893 increased by 201—from 2,553 to 2,754—and the number of pupils had increased by about 13,000—from 180,410 to 193,431. But the number of Classes in different branches of Science had decreased by 11—from 10,352 to 10,341. In previous years the rate of increase in the number of Classes and of Pupils under instruction had been higher than that of the number of Schools. In fact, in 1890 and 1891 there were absolutely fewer Schools than in 1889, though the number of Classes was larger. This was no doubt owing to the amalgamation of smaller Schools or to their absorption in the more prosperous and better supported Schools in their neighbourhood. The change in this relative rate of increase which occurred in 1893 was due to the Minute of 12th November 1891, which came into operation at the examination in 1893, abolishing payments on results for a second class in the Elementary Stage. Many Classes in which instruction of a very elementary nature only had been given were closed or ceased to have any connection with the Department.

Year.	Schools.	Classes.	Pupils under Instruction.
1884 - - -	1,463	5,001	78,336
1885 - -	1,542	5,649	78,810
1886 - - -	1,682	5,862	94,838
1887 - - -	1,684	6,300	103,088
1888 - - -	1,952	6,579	112,808
1889 - - -	2,195	7,475	131,313
1890 - - -	2,063	7,756	133,821
1891 - - -	2,164	8,568	148,408
1892 - - -	2,553	10,352	180,410
1893 - - -	2,754	10,341	193,431

2. Of the 2,754 Schools in 1893, 70 were organised Day Science Schools and 9 were organised Night Science Schools—that is to say, Schools giving a graduated three years' course of instruction

in various branches of Science. The number of pupils in these Schools was 8,469 and 1,061 respectively.

Of the 193,431 pupils under instruction in 1893, 189,318 come within the category of those on account of whose instruction payments on the results of examinations are made by the Department of Science and Art.

Of the schools examined in 1893, 2,153 were in England and Wales, 379 in Scotland, and 222 in Ireland. This was an increase on the previous year of 167 in England and Wales, of 18 in Scotland, and 16 in Ireland. The number of students who came up for examination from them was 106,600, or an increase of 1,562 on the previous year. Besides these, 3,798 self-taught students and pupils from classes not entitled to claim payments on results presented themselves for examination.

3. In the next table are given, for the same ten years as in the preceding table, the results of the examinations in May, shewing the number of students examined, the number of papers worked, the number of papers which were passed in one class or another, and the number which obtained a first class in the Elementary or in the Advanced Stage May examinations.

Year.	Persons examined.	Papers worked.	Papers passed.	First Classes in Elementary and Advanced Stages.
1884	52,866	86,910	61,734	17,181
1885	54,241	97,238	68,340	20,252
1886	58,476	114,432	78,196	22,726
1887	67,620	127,875	88,405	25,833
1888	74,038	139,369	93,218	24,343
1889	86,054	161,758	108,802	26,119
1890	86,318	162,853	114,245	34,027
1891	93,659	179,549	115,610	28,448
1892	108,858	203.347	136,778	35,932
1893	110,398	201,597	83,511	46,099

Of the 110,398 students who were examined, 58,099 were successful in passing in one or more subjects, and of these 23,018 were successful for the first time. In the previous year 84,081 were successful, and 44,016 for the first time.

The figures given in the preceding table are, however, not fully comparable throughout. In the first place, since 1889, "Geometrical Drawing" has taken the place of 2nd Grade Art Geometry and has been included in this Science table. In the second place the abolition, in 1893, of the second class in the Elementary Stage of Science subjects, except in Ireland and in small places in England and Scotland, affects not only the number of papers passed, but also of papers worked; one of the objects of the change being, as explained in the Report for 1891, to discourage the presentation of pupils for examination who

possessed only a very elementary knowledge of the subject. In the third place the present pass in the Elementary Stage is counted in the last column, though the standard is not quite so high as that required previously for a first class.

4. The examinations were held in 1893 at 2,286 centres in the provinces, and at 178 in the metropolis. Of the papers worked, 154,846* were in the Elementary Stage and 43,505 in the Advanced Stage, the number of first classes in each stage being respectively 40,374 and 5,725; while the number of papers in the Honours division of the examination was 3,246, of which 190 passed in the first class and 661 in the second class. Examinations were also held in various subjects of Science by the Department in the Isle of Man, Jersey, Guernsey, Natal, New Zealand and Australia, the total number of papers worked being 303. (See also table, p. 175.) The cost of these examinations and any payments on their results were borne by the respective Colonies and Dependencies.

Payments on results of examinations.

5. The payments to Science Schools, exclusive of those made to Training Colleges, on the results of the Examinations for the year 1893, amounted altogether to 130,009*l.*, or 6,362*l.* more than in the preceding year. These payments are analysed in the following table:—

—	In 1893.	In 1892.
	£ s. d.	£ s. d.
For each individual student under instruction	– 13 5¼	– 13 8½
For each student in each subject - -	– 9 7	– 11 3
For each paper worked at the examination -	– 12 10¾	– 12 1¾
For each individual student examined -	1 3 6½	1 2 8½

Reports of the Examiners in Science.

6. The reports of the examiners were printed and circulated among the schools as soon as possible after the examination. Such portions of the reports as have a general interest are reprinted below.

Practical Plane and Solid Geometry (Examiners, Major Sir G. S. Clarke, K.C.M.G., R.E., and Professor T. F. Pigot, C.E., M.I.M.E.):—

Honours.

Many of the answers were remarkably good, showing a thorough knowledge of Solid Geometry, but the execution was often very indifferent even amongst the best answers. There appears to be but little attention paid by students to the value of neatness and the proper use of drawing instruments.

---

* This number includes 20,918 papers worked in Geometrical Drawing, which has taken the place of the 2nd Grade Geometry in the Art examinations since 1889 inclusive.

Advanced Stage.

The paper was generally well worked.

Elementary Stage.

There is not much indication of careful teaching of the theoretical part of solid geometry, and there is a very general deficiency in knowledge of projection and intersections of lines and planes. On the other hand, the projections and intersections of solids, such as that of the pyramid and block of Questions 21 and 22, were fairly worked.

Section I.—Geometrical Drawing.

Great weakness in the construction of scales was generally manifested. Many candidates do not appear to realise that a scale is required for a specific purpose; viz., to enable dimensions to be taken from it. Thus scales are presented which are not properly divided, or if properly divided, not properly figured, and therefore practically valueless. The practical requirements of a scale should be fully explained, and students should be taught to recognise them. Finally, there appear to be too many candidates who have not learned the use of a protractor for setting out angles. This should evidently be taught at the earliest stage.

The Examiners desire to impress upon teachers the necessity for devoting their main attention to the principles of their subject, in preference to the mere working of selected examples whose significance may be misunderstood. Some improvement in this respect has undoubtedly taken place, but more may fairly be expected. The strongly marked difference exhibited between certain schools—a difference which cannot be wholly accounted for by a varying average of intelligence among pupils—seems to prove the great advantage attainable by sound and thorough teaching of principles.

Machine Construction and Drawing (Examiners, Mr. T. A. Hearson, R.N., M.I.C.E., and Mr. Joseph Harrison, M.I.M.E., Assoc. M.I.C.E.) :—

Advanced Stage.

The number of candidates in this stage was 4,674, the number last year being 3,769, thus there was the large increase of 905, which is 24 per cent. But amongst them were 578 more failures than last year, whilst the number which passed in the 1st class was almost unchanged.

These figures testify to the fact that a large proportion of the increase consisted of candidates quite unfit to take the advanced stage, who were probably induced to do so by the raising of the scale of award in this stage.

Honours Examination.

In the Honours paper the questions were answered with only a moderate degree of success, and, with a few exceptions, the same remark applies also to the home work designs.

Building Construction (Examiner, Colonel H. C. Seddon, R.E.) :—

Advanced Stage.

There was an increase of 453 candidates in this stage, and a very low percentage of failures, notwithstanding the large additional number of candidates.

Out of the 1,962 papers only 35 failed to obtain 20 per cent. of the full marks allowed.

Honours Stage.

The total number of Honours Papers was 461, being 116 in excess of last year, and 168 more than in 1891.

The number of home work designs was 141, as against 235, 139, and 112 in the three previous years.

Of the 464 candidates only four obtained a first class, 97 a second class, and 360 failed, as against 12, 113, and 220 last year.

Home Work Designs.

Some of the designs were very well thought out; six of the candidates obtained full marks.

There were no general defects calling for special notice.

Naval Architecture (Examiner, Mr. J. H. Morrison, R.C.N.C.) :—

Elementary Stage.

The work in this stage is very satisfactory.

Advanced Stage.

Many candidates have sent in excellent work, but there are many failures, due mainly to failure in the Laying Off section in certain batches of papers.

Two years ago, attention was called to the ignorance of many candidates in this section, and the matter was again referred to last year.

It can only be repeated that candidates, who in the future intend to take the advanced paper, should devote attention to laying off ships.

Honours Stage.

Speaking generally, the knowledge shown in the Laying Off section is weak, and a number of candidates failed therein.

Several candidates were unfitted to cope with the Calculation Section.

Mathematics (Examiners, Rev. John F. Twisden, M.A., Mr. A. R. Willis, M.A., D.Sc., and Mr. P. T. Wrigley, M.A.) :—

First Stage.

The students who took the first stage paper are about seventeen hundred fewer than those who took the first stage paper last year. The work this year is of much the same character as the work of last year; rather fewer examinees make low marks, *e.g.*, below 30 marks; about the same number, and, therefore, proportionately rather more, make good marks, *e.g.*, above 59 marks; while a larger number make very good marks, *e.g.*, 90 marks and upwards.

Second Stage.

The results in the second stage are not so good as usual. The falling off is most marked in geometry and trigonometry.

Third Stage.

In the Third Stage, the work as a whole was not so good as that of last year. Although there were more papers worked, the number of highly-marked papers was distinctly less.

Honours.

In *Honours* the results are on the whole good.

Fourth Stage.

The results in the Fourth Stage are about the same as those of last year.

Fifth Stage.

The results in the Fifth Stage are distinctly better than those of last year.

Sixth Stage.

There was a considerable increase in the number of examinees; the general character of the work is about the same as last year.

Seventh Stage.

Four papers were worked, the same number as last year. One of these was very well done, and two others fairly well.

The *Honours* paper was not taken by anyone this year.

Theoretical Mechanics (Examiner, Rev. John F. Twisden, M.A.) :—

The number of examinees is nearly the same as last year, but this year a few more take the paper of the Second Division. The work is very much better in some schools than in others, but on the whole the work in the first stage of either division is much better this year than it was last year.

Honours.

There was a considerable increase in the number of candidates for Honours; but the best work last year was better than the best work this year.

Applied Mechanics (Examiner, Prof. T. M. Goodeve, M.A.) :—

In the Elementary stage, the answers were, speaking generally, of a medium character; there were comparatively few really bad papers, while on the other hand there were but few of first-class merit.

In the Advanced Stage, the papers were decidedly below the average standard of recent years, as reflected in the smaller proportion of first-class awards, and also in the per-centage of passes, in both of which respects there is a marked decrease.

Some good work was sent in for the Honours paper, but only by a few candidates, the majority being quite unequal to the mastery of the paper.

Sound, Light and Heat (Examiners, Prof. A. W. Rücker, M.A., F.R.S., Prof. W. G. Adams, M.A., F.R.S., and Mr. R. T. Glazebrook, M.A., F.R.S.) :—

Elementary Stage.

The papers in this subject were fairly done.

Advanced Stage.

The paper on Sound was very well answered. The answers to the paper on Light were fairly good. The examiners were well satisfied with the answers to the paper on Heat.

HONOURS.

The Honours Paper in Sound was badly done. Some attempted the Honours Paper who would hardly have passed in the Advanced.

The answers to the paper on Light were, on the whole, satisfactory. The answers to the questions on Heat were moderately well done.

Electricity and Magnetism (Examiners, Prof. A. W. Rücker, M.A., F.R.S., Prof. A. W. Reinold, M.A., F.R.S., and Mr. R. E. Baynes, M.A.) :—

ALTERNATIVE ELEMENTARY PHYSICS.

The Assistant Examiners report that the papers in this subject were done better than in previous years, an opinion which our own observation entirely confirms.

ELEMENTARY STAGE.

This paper, taken as a whole, was badly done.

ADVANCED STAGE.

The paper was, on the whole, well done, showing an improvement on the average of recent years.

HONOURS STAGE.

The practical work was well done. All the questions were attempted by one or other of the candidates, and most succeeded in doing a fair day's work.

The paper work was hardly as good as last year.

Chemistry (Examiners, Prof. T. E. Thorpe, B.Sc., F.R.S., Prof. W. A. Tilden, D.Sc., F.R.S., and Prof. W. N. Hartley, F.R.S.) :—

ELEMENTARY STAGE.

The issue of the new Minute has been attended with beneficial results as regards this Stage. Fewer worthless papers have been sent in; even apart from this the general average is distinctly higher than in previous years. The papers were, as a rule, well worked, and, on the whole, indicated careful teaching. It was evident, too, that attention had been paid to a number of points on which in our last report we thought teachers should exercise greater care or to which in our judgment they should devote more time.

ALTERNATIVE ELEMENTARY STAGE.

The number of candidates in this division is somewhat smaller this year than last, probably as a consequence of the operation of the Departmental Minute. The work done is, on the whole, good, and the answers generally exhibit an intelligent understanding of the experiments seen or made. The teaching, however, is too strictly confined to the exact letter of the syllabus.

ADVANCED STAGE.

The average character of the papers in this Stage had been lowered by teachers sending in pupils on the assumption that the Departmental Minute did not apply to this Stage. A considerable number of those who attempted the questions could not possibly have passed in the First Stage. The general character of the answers was decidedly lower in standard than that commonly

found in the Elementary Stage. The attempts at questions bearing on chemical theory showed very imperfect teaching in many schools; indeed, it is obvious that in many cases the pupils had received no specific instruction in "advanced" chemistry.

Honours.

A few good papers were sent in, but the majority were very unsatisfactory. By far the larger proportion who attempted this stage had not received any special instruction. Comparatively few teachers seem to care to prepare pupils for this branch of the subject.

Practical Inorganic Chemistry.

Elementary Stage.

The practical work in this stage was, as a rule, fairly well done, although several schools had a defective system of work. Lead, bismuth, potassium, and ammonium were frequently badly separated. Fictitious or "bogus" confirmatory tests less frequently given than formerly; the severity of the examiners in penalising this practice has evidently had a salutary effect. The majority of failures in this branch was due to the imperfect manner in which the questions of the written paper were answered. Teachers generally seemed to give little attention to instruction in the theory of analysis.

Advanced Stage.

As regards the practical work, more attention should be paid to the recognition of oxides and sulphides; the detection of the bases present in the phosphates and fluorides was also very frequently wrong. Dry tests were generally neglected.

The answers to the questions were on the whole satisfactory.

Honours.

As regards the qualitative parts of the work the same remarks apply as in the Advanced Stage. The quantitative work was well done in a few cases, but a very large proportion of the candidates had no idea how to determine the specific gravity of the alloy.

Organic Chemistry.

Elementary Stage.

The papers in this branch were fairly well answered on the whole. More attention should be paid, however, by the teacher to experimental illustrations.

Advanced Stage.

Although comparatively few in number the general quality of the papers was much higher than in any other stage of the subject. Some of the papers were excellent, and showed evidence of careful instruction.

Honours.

Some of the papers sent in were excellent, but they were few in number. The general quality, however, was distinctly higher than in the corresponding stage in Inorganic Chemistry.

Elementary Stage (Practical).

As regards the practical work, the most frequent errors arose from imperfect knowledge of methods of detecting organic acids.

As regards the written paper the answers from some schools were very good.

Advanced Stage (Practical).

The practical work was excellent in a large number of cases.

The written paper was less satisfactory, and occasioned a large proportion of the failures.

Honours (Practical).

The qualitative work calls for no special comment. The quantitative work was on the whole much better than in the Honours Inorganic Stage, and the determination of the melting point was as a rule fairly well done.

Mineralogy (Examiner, Mr. F. Rutley, F.G.S.):—

Elementary Stage.

In the present instance, comparatively worthless papers, far too plentiful in previous years, are very few in number. On the whole, the teaching seems to have improved.

Honours.

Many of the Elementary and Advanced students have done far better than these candidates.

Human Physiology (Examiners, Professor Michael Foster, M.D., Sec. R.S., and Mr. A. Sheridan Lea, D.Sc., F.R.S.):—

The change this year in the published results of the examination in the Elementary Stage has made it somewhat difficult for the Examiners to compare the results of this examination with those of other years on the basis of the final per-centages arrived at by the examiners individually and collectively. The general impression was that on the old scale of marking the number of those rejected would have been distinctly less than in previous years, and that so far the papers showed some improvement. On the other hand, there appeared to be a somewhat marked deficiency of high-class papers in this stage. The bulk of the candidates avoided making grossly inaccurate statements, but did not show any distinctly corresponding increase in the extent of their knowledge. The diminution in gross blunders as compared with a few years ago is satisfactory, and it may be hoped that the next few years will show an increase in the sufficiency of the answers sent up.

In the Advanced Stage, the final results were less satisfactory than last year. This was largely due to the fact that an unusually large number of papers were sent in, which showed that the candidates were absolutely unprepared to compete against the standard of this stage. Presumably, the teachers in consequence of the changes, had been induced to send in for the advanced stage a larger number of their pupils. This opinion seems to be borne out by the fact that while the total number of papers in both stages was nearly the same as in 1892, there were 500 more answers sent up in the advanced stage, and 600 less in the elementary stage than last year. If allowance is made for the possible influence on the final results indicated by the above remarks, then there appeared to be a distinct slight improvement in what may be regarded as the legitimately "advanced" papers of this year.

In the Honours Stage, 11 candidates sent up answers. Of these, all but three were quite worthless and obtained practically no marks. The remaining three were subjected to a practical examination, and as a final result one candidate was placed in the second class. The bulk of the work sent up indicates that most of the candidates do not at all realise the severity of the demand on their training and knowledge made by the Department in the Honours stage. If they did, there would be fewer papers sent up each year, of which some scarcely satisfy an "Elementary" standard on the questions set, and of which the majority would be rejected on an "Advanced" standard.

General Biology (Examiner, Prof. A. Milnes Marshall, M.D., F.R.S.):—

The results of the examination are decidedly satisfactory, and the establishment of two stages—Elementary and Advanced—has proved a distinct success. Candidates showed good judgment in the choice of the paper and of the questions to be attempted; and the answers, perhaps owing to the limitation in scope of the Schedules, were distinctly better, more precise, and more accurate, than in former years. The proportion of 1st classes was very good, and the absolute failures were comparatively few. On the whole, the improvement, as compared with recent years, is a marked and a most satisfactory one.

It cannot be too strongly impressed on teachers that *candidates are expected to show a practical acquaintance with the plants and animals mentioned in the Syllabus.* It is always quite clear from the candidates' answers, whether they have this practical acquaintance or not; and in some cases it was only too evident from the repetition of the same mistakes, that the teachers themselves were at fault in the matter.

Zoology (Examiner, Professor A. Milnes Marshall, M.D., F.R.S.):—

Eighty-one candidates took the Elementary paper; the questions were, as a rule, well answered, and the proportion of passes was good. In too many cases, however, it was clear that neither the candidates nor their teachers had sufficient practical acquaintance with the animals mentioned in the Syllabus. It is of great importance that this deficiency should be corrected before next year. The Advanced paper was only taken by nine candidates.

The Honours paper was taken by two candidates, neither of whom possessed anything like the requisite knowledge of the subject.

On the whole, the results of the recent changes in the regulations are very satisfactory. The total number of candidates has increased, and candidates appear to find more easily the paper that is best suited to their knowledge.

A marked and pleasing feature in this year's examination is the considerable diminution in the proportion of absolute failures.

Principles of Mining (Examiner, Mr. H. Bauerman, F.G.S.):—

The general result is rather below that of the preceding year; which might, perhaps, have been expected with the sudden increase of 35 per cent. in the number of papers. There is a small falling off in the proportion of passes in the Advanced and Honours Stages. In the Elementary Stage owing to the change in the system of marking it is not easy to make a comparison, but as a whole I think this class is somewhat improved.

In the Advanced Stage an arithmetical question has been responsible for a considerable loss of time owing to the complicated methods generally adopted for its solution, and in too many instances the answers showed that the candidates had no idea of the meaning of the figures that they obtained.

The Honours papers are fairly good, but their examination is becoming troublesome owing to the discursive habits both of style and handwriting adopted by many candidates, who offer pages of gossip upon one or two questions instead of concisely answering a fair proportion of the whole paper.

Nautical Astronomy (Examiner, Rev. J B. Harbord, M.A.):—

Elementary Stage.

Upon the whole the results are excellent, both in the theory and practical problems.

ADVANCED STAGE.

The practical work is throughout extremely good; but the answering to the theoretical questions is, upon the whole, unsatisfactory. In consequence of the want of care, and weakness in the theoretical work the number of students who have attained to the standard of a 1st class is much smaller than it would otherwise have been.

HONOURS.

The knowledge shown by all the five candidates is very even as to practice and theory, the proportion of marks gained in each division of the subject being about half of the total gained by each student.

Steam (Examiner, Prof. T. M. Goodeve, M.A.):—

In the Elementary Stage, taking the paper as a whole, the sketching was in may cases so inadequate as to lead to the inference that the student had no knowledge whatever of mechanical drawing. It is obvious that in order to describe sufficiently the working parts of an engine, the student should be familiar with the ordinary modes of representing on paper the particular details which he is called upon to explain.

In the large schools, which are well provided with models, diagrams, and teaching appliances, this defect does not exist, but in a considerable proportion of the smaller schools it is most apparent.

There are two other principal matters in which improvement is necessary, namely, (1) greater attention should be given to accuracy of statement both as regards definitions and as regards the fundamental properties of the working fluid steam, (2) the students should be trained in obtaining numerical results.

In the Advanced Stage, questions involving practical acquaintance with engine details were on the whole well answered, but theoretical knowledge of the behaviour of steam was very scanty.

In the Honours examination there were many good papers, though it is rare to find the due combination of practical with theoretical knowledge. Also, theoretical questions a little out of the common track were not answered correctly, or at all.

Physiography (Examiners, Prof. J. W. Judd, F.R.S., and Prof. J. Norman Lockyer, F.R.S.):—

The effect of the new rules has been seen in the smaller number of candidates in the elementary stage. But on the other hand many candidates have attempted the Advanced, and even the Honours paper, who were totally unprepared for such an examination, and would probably have failed in the Elementary stage.

In the Advanced Stage the results have been decidedly less satisfactory than in former years, owing to an influx of candidates who ought properly to have attempted the Elementary paper.

The great increase in the number of the Honours papers is not attended with any augmentation of the number of really good answers. Most of the papers were in fact written by candidates who could not have passed in the Advanced stage, and many who would certainly have failed in the Elementary stage.

Hygiene (Examiner, Prof. J. L. Notter, M.A., M.D.):—

Last year the whole number of papers sent in for examination was 5,247, this year 6,048, showing an increase of 801 examinees. This was chiefly in the Advanced stage, which was 411 more than last year. The character of the examination paper was such as to make it as practical as possible, especially in the Elementary and Advanced stages, but it was not more difficult than in former years to students who had been well taught. In spite of the general improvement exhibited by the answers there are still evidences of defective teaching, and a large amount of instruction is given by rote; this is shown by the use of technical words which are obviously ill understood.

ELEMENTARY HUMAN PHYSIOLOGY.

Throughout the Elementary paper, and the same is the case to a less degree with the Advanced paper, there is a distinct improvement in knowledge in this subject.

ADVANCED HYGIENE.

The papers in this stage were of very unequal merit. Only 14 per cent. were found to be worthy of a first class, while 53 per cent. passed in the second class. Some of those who failed would not have passed the Elementary examination.

HONOURS EXAMINATION.

For this part of the examination 134 candidates were examined. Three per cent. gained first class; 34 per cent. second class; while 62 per cent. failed. These numbers approximate very closely to those of last year.

Looking at the general character of the papers sent in, and the increased number of candidates who present themselves for examination, it is apparent that much good work is being done by the dissemination of sound knowledge in regard to the prevention of disease in the schools examined by the Department.

There is still some evidence of instruction by rote; a similarity in wording of an answer being traceable through whole groups of papers, while often expressions and terms are employed which are evidently not understood.

As a larger number of qualified teachers will in time be available throughout the country, there is every reason to think that as the instruction becomes more thorough and practical, so will the standard of knowledge be raised, of which, even now compared with last year, there is distinct evidence.

On the whole, the general results of this examination are very encouraging.

7. *School Fees.*—The table at p. 40 in Appendix B. gives the fees paid by students in the various Science Schools. They amounted, irrespective of those which were included with the Art School fees, to 26,797*l.* 7*s.* 10*d.* The previous year they amounted to 33,344*l.* 18*s.* 5*d.* School Fees.

8. *Training Colleges.*—The number of Training Colleges examined in 1893 in Science (including Geometrical Drawing) was 50—one less than in 1892—and the number of separate classes in different branches of Science was 221. Some general remarks from the Examiners' reports are given below, the full reports having been communicated to the Colleges. Training Colleges. Extracts from Examiners' Reports.

Practical Plane and Solid Geometry (Examiner, Mr. G. Selwyn Edwards):—

GEOMETRICAL DRAWING.

The number of papers marked in this section is 128. Nearly all the questions have been well answered, the accuracy and neatness of drawing showing improvement upon the work of previous years.

Mathematics (Examiners, Rev. J. F. Twisden, M.A., and Dr. A. R. Willis, M.A.):—

In Stage I. it was plain that much pains had been taken with the subject both by the students and their teachers, and so far as the text is concerned the results are satisfactory. It is a great matter when the text has been carefully

studied, and we should be sorry to seem to undervalue it. Still, when a student's knowledge goes no further than the text, something is wanting; and, in fact, it was only a few of the students who showed much power of answering questions that did not come out of their text-books.

Our remarks on Stage II. come to much the same thing as saying that nearly all the work was confined to the easier parts of the paper; this, however, is what commonly happens in examinations on this subject, and in the present case the work, as far as it goes, is very fairly well done.

Theoretical Mechanics (Examiner, Rev. J. F. Twisden, M.A.):—

A.—Division I.—Elementary Stage.

The results of this examination are on the whole satisfactory; nearly a third of the students get high marks, 70 and upwards, and fewer than one-fifth of them get low marks, *i.e.*, under 50 marks. These results could only be obtained by considerable attention having been paid to the subject, and of that there is other evidence; though, of course, some schools are better than others.

In the Advanced Stage the work is fairly good, but not nearly so good (proportionately) as in the Elementary Stage, *e.g.*, nearly two-thirds of the students get fewer than half marks.

B.—Division II.—Advanced Stage.

The work in the first stage of Division II. was by no means as good as the work in the first stage of Division I., but it was much better in some schools than in others.

Magnetism and Electricity and Alternative Elementary Physics (Examiners, Prof. A. W. Reinold, M.A., F.R.S., and Mr. Robert E. Baynes, M.A.):—

Alternative.—The paper was on the whole well done. The results were decidedly better than last year's.

Elementary.—Very fair in all three branches—Magnetism, Frictional and Voltaic Electricity. Questions involving a knowledge of electrical potential were more intelligently answered than in former years. There was, however, frequent failure in answering questions in which some knowledge of mechanics was required.

Advanced.—Not so well done as the elementary paper. Answers sent in by two or three of the colleges showed a high average. Many of the others were relatively poor. Book-work questions, descriptions of apparatus, &c., were fairly well done. Where failure occurred it was in questions involving the application of principles and requiring a little thought.

Inorganic Chemistry—Theoretical and Practical (Examiner, Prof. W. A. Tilden, D.Sc., F.R.S.):—

The general impression derived from the perusal of the papers this year agrees pretty closely with the opinion formed last year, viz., that in the elementary stage, both theoretical and practical, the students are better taught than in the second, or so-called "advanced" stage.

In the practical examination, the recognition of the substances given for analysis was accomplished fairly well by the great majority of the candidates, but the weak part of the work still lies in the answers to the questions in practical chemistry. This weakness is the cause of failure in a considerable number of cases, although the analysis was good. But the absurdity of many of the answers in these cases shows that the students have quite insufficient experimental experience, so that they are unable to see that what they describe is too often quite impracticable or even absurd.

Human Physiology (Examiners, Prof. M. Foster, M.A., M.D., Sec. R.S., and Mr. A. S. Lea, M.A., D.Sc., F.R.S.):—

Elementary Stage.—Although the change adopted this year in the mode of classification rendered it impossible for the examiners to compare the results of the work sent up this year with those of previous years on the numerical basis of their final per-centages, their impression was that the work as a whole was quite up to the high standard of general excellence attained in previous examinations. On last year's standards of marking the number of rejections would have been extremely small.

Advanced Stage.—At the close of the examination the examiners were of opinion that the papers sent up in this stage showed a marked and decided improvement on those of 1892. This opinion was fully confirmed by a comparison of the per-centages of failures, &c., in 1892 and 1893. From these it appears that the improvement showed itself chiefly in a large increase of those who reached the standard of a first class, and a correspondingly large diminution of failures. In the case of only two colleges was the work sent up decidedly unsatisfactory, being in one both insufficient and, above all, marked by gross errors in matters of fundamental importance (Question 22), and, in the other, showing that the subject had been learnt "by heart" rather than with any effort at understanding its meaning.

Botany (Examiner, Dr. D. H. Scott, M.A.):—

As regards the examination generally, a marked distinction must be drawn between the two stages. The result in the case of the Elementary Stage is decidedly favourable, over 35 per cent. of the candidates obtaining 60 or more marks. There are many faults even in this stage, and especially the evidence of "cramming" is impossible to overlook. Still, as compared with former years, the work is good, and often shows really efficient teaching. The same cannot, unfortunately, be said for the Advanced stage. In the May examinations the new syllabus, involving the introduction of a number of cryptogamic types, had an evidently good effect, the per-centage of first classes in the Advanced examination, being greater than in any year since 1877. In the Training College examination the reverse is the case. The increase in the number of types seems to have had a demoralising effect on the teaching. This may probably be due to the want of sufficient time for the adequate teaching of the subject.

The want of any *practical* knowledge of the structure and physiology of plants is still the fundamental defect (most conspicuous in the Advanced Stage), and until this can be remedied, no real improvement can be looked for. In answering questions requiring any exercise of reasoning powers (as distinguished from mere memory) the candidates are also remarkably deficient.

Physiography (Examiners, Prof. J. W. Judd, F.R.S., and Prof. J. Norman Lockyer, C.B., F.R.S.):—

The Elementary paper was fairly well answered so far as the questions relating to terrestrial physiography are concerned. In the great majority of cases a preference was shown for these questions, three of them being selected, and only two astronomical questions answered.

The Elementary students seemed only to have learned physical geography, and the Advanced ones only astronomy. Hence the former only answer two "astronomical" questions, and do those very badly as a rule, and the latter answer three questions.

The payments on results of Science Examinations held in 1893 in Training Colleges amounted altogether to 7,934*l.*, or at the rate of 1*l.* 16*s.* 2*d.* for each student under instruction in Science. The corresponding figures for the previous year were 6,150*l.* and 1*l.* 12*s.* 11½*d.* respectively. Payments in Training College

Buildings, Fittings, and Apparatus Grants.

9. *Grants for Buildings, Fittings, and Apparatus.*—Building grants were made in 1893 to Science Schools at Plymouth, Montrose, Weston-super-Mare, Torquay, Southampton, Brighton, Ashton-under Lyne (Heginbotham), amounting to 2,251*l.* 12*s.* 6*d.*; and grants for fitting up laboratories, &c. to 4 schools, amounting altogether to 333*l.* 13*s.*; while the grants in aid of the purchase of apparatus, diagrams, and examples amounted for the year to 93*l.* 17*s.* 9*d.*; the grants in the previous year being 2,298*l.* for buildings, 1,245*l.* 1*s.* 2*d.* for fittings, and 2,127*l.* 0*s.* 5*d.* for apparatus.

Exhibitions and Scholarships.

10. *Royal Exhibitions and National Scholarships.*—There were 141 competitors for the 7 Royal Exhibitions, 22 National Scholarships, and 6 Free Studentships to the Royal College of Science, London, and the Royal College of Science, Dublin, which were awarded on the results of the May examinations. A high standard was attained, as in former years, by the successful competitors.

Local Exhibitions and Scholarships.

11. *Local Exhibitions and Science and Art Scholarships.*—Fourteen Local Exhibitions, Science—towards which the Department provides 25*l.* per annum, on the locality contributing a similar amount—were awarded last year, being the same number as in the previous year. These are tenable at any institution where advanced Science instruction is given. Of the 14 exhibitioners, 6 elected to study at the Royal College of Science, London; 2 at the Royal College of Science, Dublin; 3 at the Owens College, Manchester; 1 at the Yorkshire College, Leeds; 1 at the Mason College, Birmingham, and 1 at Glasgow University. For the *Science and Art Scholarships,* which are awarded to pupils of Elementary Schools and of Organised Day Science Schools under 16 years of age, a local contribution of 5*l.* a year is necessary; this the Department supplements by a grant of 4*l.* in the first year. 7*l.* in the second, and 10*l.* in the third year: 221 first year scholarships were awarded in 1893; 90 Scholarships were renewed for a second year, and 62 for a third year, or a total of 373, being 17 less than in the previous year.

Whitworth Scholarships and Exhibitions.

12. *Whitworth Scholarships and Exhibitions.*—The first competition under the present scheme for these scholarships was held in 1888, when four scholarships of 125*l.* a year, tenable for three years, 20 exhibitions of 100*l.*, and 10 of 50*l.*, tenable for one year, were given. In 1893 the competition was for four Scholarships of 125*l.* a year, tenable for three years; and 30 Exhibitions, of 50*l.*, tenable for one year. The number of competitors was 88, as compared with 93 in 1892. Of these, 58 as compared with 68 in 1892 passed in the qualifying subjects. The successful competitors continue to show a high standard of attainment.

Aid to local Teachers of Science.

13. *Aid to local Teachers of Science.*—Arrangements were made as in previous years, at Owens College, Manchester; Firth

College, Sheffield; Mason College, Birmingham; the Yorkshire College, Leeds; University College, Nottingham; University College, Bristol; the Durham College of Science, Newcastle-on-Tyne; University College of Wales, Aberystwyth; University College, Bangor; University College, Cardiff; University College, Dundee; and the University of Aberdeen, to aid Science teachers in the country to attend the classes and laboratories in those institutions for advanced instruction in Science. 84 teachers were selected to attend various courses of instruction, three fourths of their fees, for day classes, and one half, for evening classes, being defrayed by the Department.

Further details with regard to Science instruction during the year 1893 will be found in Appendix B. (page 13).

(b.) *Advanced Scientific Instruction.*

Royal College of Science London.

14. *The Royal College of Science, London, with which is incorporated the Royal School of Mines.*—The Report of the Dean and Council of the school for the session 1892–93, is given at page 215, 304 students were under instruction in the various divisions of the school during the session, an increase of 10 on the previous year. Of these 141 were Government students—Royal Exhibitioners, National Scholars, Local Exhibitioners, Free Students, and Teachers in Training—and 163 were private students paying fees. The attendance at the several classes was as follows:—Chemistry, 155; Physics, 97; Mechanics, 67; Metallurgy, 75; Biology (including Botany), 35; Geology (including Mineralogy), 77; Mining, 34. These are the gross numbers of both terms, but of individual students the numbers are respectively 132, 86, 62, 57, 26, 74, and 34. The number of Teachers in Training was 16 in Chemistry, 21 in Physics, 14 in Mechanics, 13 in Biology, 17 in Geology, and 6 in Agriculture and Agricultural Chemistry, 1 in Mining, and 2 in Metallurgy. The terminal and sessional examinations of the College were conducted under the joint examinership of the Professors and external examiners.

Teachers in Training.

Summer courses for Teachers.

15. The summer courses for teachers, which last about three weeks, were in the Principles of Agriculture and Agricultural Chemistry, Botany, Chemistry, Heat, Metallurgy, Physiographic Geology, and Steam and the Steam Engine. They were attended by 255 teachers.

Lectures to working men.

16. The lectures to working men were given by Prof. J. W. Judd, F.R.S., on "Ocean Floors"; Prof. C. Le Neve Foster, F.R.S., on "Ore and Stone Mining"; and Prof. C. Roberts Austen, C.B., F.R.S., on "Some recent advances in Metallurgy." They were delivered in the Lecture Theatre of the Museum in Jermyn Street. The numbers of tickets issued for the three courses were respectively 407, 144, and 321.

It will be seen from the Reports of the Dean and Council that as in previous years a considerable amount of original work has been carried on in the College.

We have to record with much regret the death last September of Major C. A. Macgregor, who had for several years most efficiently filled the post of Registrar and Superintendent of Discipline in the College. The situation has been filled by the appointment thereto of Mr. Francis Fladgate.

Dublin Royal College of Science.

17. *Dublin Royal College of Science.*—The reports of the Dean and Council and of the Secretary are given in the Appendix, pages 291 and 293. The number of students attending the College again shows an increase, there having been 113 in the past, as compared with 109 in the previous year.

18. Of these 113 students, 34 were going through the full three years' course for the associateship, 14 of these being Government students, *i.e.*, 9 Royal Exhibitioners, 4 Royal Scholars, and 1 Local Exhibitioner. The number of occasional students was 79. In the previous year the total number of students was 109. Of these, 28 were entered for the associateship, 14 being Government students, and 81 occasional students.

II.—ART DIVISION.

Aid given towards the Promotion of Instruction in Art.

(*a.*) *Drawing in Elementary Schools and in Training Colleges for Elementary School Teachers; and Manual Instruction in Elementary Schools*

Elementary Schools.

19. *Elementary Schools.*—During the year ending 31st August 1893, 19,877 elementary schools, with 2,080,946 scholars, were taught Drawing and examined under the regulations of the Department. 829 of these schools were in Scotland, 87 in Ireland, 41 in the Isle of Man, and 18 in Jersey. This was an increase of 1,589 schools, and of 106,794 scholars, as compared with the numbers in 1891–92, when 18,288 schools were examined in which 1,974,152 scholars were taught Drawing.

Besides the scholars who were taught in the Drawing Standards, 18,543 pupil-teachers and ex-standard scholars were examined, of whom 7,948 were successful in subjects of the 2nd Grade Examination.

The numbers given above include 485 evening schools, in which 18,497 scholars were examined in Drawing, and the grants earned by them amounted to 1,261*l.* 18*s.*

Evening Continuation Schools.

After the new Evening Continuation School Code of 1893 was issued from the Education Department at Whitehall, representations were made to this Department that an alternative syllabus for Drawing in Evening Schools, which would not necessarily involve the repetition of any of the Standard work used in the

Day Schools, was desirable. Such an alternative syllabus for evening schools was therefore issued, and it was specially provided that managers might suggest other courses than those laid down in that syllabus. It is very desirable that the teaching of Drawing in the Evening Schools should be encouraged as much as possible by those who have charge of them. The Minute relating to grants for drawing in Evening Continuation Schools in England, Wales, and Scotland, together with the Syllabus for Drawing which has been sanctioned for such Schools, will be found in Appendix A., page 5.

In consequence of representations made to us on behalf of many of the older Teachers who do not hold the Elementary Drawing Certificate, we have decided to award to all such Teachers, on their applying for it, a special certificate of qualification to earn grants for Drawing in Elementary Schools provided that they have taught Drawing in schools which have obtained two or more good reports since August 1891, and that they have been recognised by the Education Department as Elementary School Teachers for seven years previous to 1st September 1891, when Drawing was made a compulsory subject of instruction for all boys in schools for older scholars. Special Drawing Certificate to Teachers.

20. The grants for Drawing in 1893 amounted to 152,860*l.*; in 1892 to 133,008*l.*; and the number of schools gaining the awards Fair, Good, and Excellent, respectively, was as follows:— Grants, &c. for Drawing.

—	Fair.	Good.	Excellent.
In 1893 - - - -	3,007	11,439	4,937
In 1892 - - - -	4,888	10,072	2,974

The payment per scholar in average attendance in 1892 and 1893 respectively was as follows:—

—	1892.	1893.
	s. *d.*	*s.* *d.*
England and Wales - - - -	1 6·8	1 8·1
Scotland - - - - -	1 7·3	1 8·7
Ireland - - - - -	1 4·8	1 5·3

21. Classes for Manual Instruction have now been established in connexion with 640 elementary schools; 353 of these schools were examined in the year ended 31st August 1893, and earned grants amounting to 4,859*l.* on account of 17,875 scholars. Manual Instruction.

Full statistics relating to drawing and manual instruction in elementary schools are given in a Supplementary Volume to this Report; and a summary of the totals for the last 10 years

as regards Drawing, and for the last 3 years as regards Manual Instruction, is given in Appendix B., at p. 190 of this Report.

Training Colleges and Teachers of Elementary Schools.

22. *Training Colleges and Elementary School Teachers.*—The Annual Art Examination for the students in Residential Training Colleges was held in October 1893, at 51 Colleges. 1,692 students took Freehand Drawing, of whom 596 obtained 1st class; 2,905 took Model Drawing, and 893 obtained 1st class; 1,555 were examined in Drawing from Models with Chalk on the Blackboard, and 408 passed; 1,933 took Drawing in Light and Shade, and 684 obtained 1st class. The total number of individual students examined was 4,145; in 1892 the number was 4,016. The Elementary Drawing Certificate (1st class) was gained by 394 students. The grants for drawing earned by the colleges, including six Day Training Colleges, amounted to 2,318*l.* 10*s.*, as against 2,236*l.* 10*s.* in 1892.

A list of the colleges examined, with the statistics for each college, is given at page 176.

(*b.*) *Art Instruction in Local Schools of Art and Art Classes.*

Schools of Art and Art Classes.

23. The number of Art Schools and Classes (including 97 Science Schools) examined in Art in 1893 was 1,909 as against 1,631 (which included 85 Science Schools) in 1892, showing an increase of 278. The number of students under instruction was 115,848 in 1892, as compared with 135,807 in 1893 Of these, 130,234 were of the industrial class as defined in the Science and Art Directory. Of the 285 Art Schools and branch classes and 1,527 Art Classes examined last year 238 Schools and 1,347 Classes were in England and Wales, 24 Schools and 129 Classes in Scotland, and 23 Schools and 51 Classes in Ireland. The number of students who sat for examination was 73,728 in 1893, or 187 more than in 1892, when the number was 73,541.

Examinations.

24. The total number of papers worked by these students in 1893 was 128,845, of which 57,080, or 44·30 per cent., were successful as compared with 114,159, of which 49,366, or 43·24 per cent., were successful in 1892. But in addition to the papers worked by these students, 12,736 papers were worked by external candidates, and candidates from classes not receiving payments on results, of which 5,073, or 39·83 per cent., were successful as against 11,984 similar papers worked in 1892, of which 4,776, or 39·85 per cent., were successful.

25. Through the change of scheme of examination some difficulty arises in attempting to bring into precise comparison the statistics of the Art examinations for 1893 (Elementary and Advanced Stages, and Honours), with those for 2nd and 3rd Grade examinations of 1892. But it may be stated that in

1893, in the Elementary Stages which closely correspond with the 2nd Grade subjects in 1892, there were 105,469 papers or exercises worked by students of Schools and Classes, of which 45,657, or 43·28 per cent., were successful, as against 89,956 in 1892, of which 38,720, or 43·04 per cent., were successful.

In the subjects corresponding with the 3rd Grade examinations of 1892 there were 23,376 papers or exercises worked by students of Schools and Classes, of which 11,423, or 48·86 per cent., were successful, as compared with 24,203 in 1892, of which 10,646, or 43·98 per cent., were successful.

Tabular statements of these results are given at p. 30.

26. In 1893 the works executed in the Schools during the session by 21,535 students were submitted for examination at South Kensington. The number of these works, 93,397, is somewhat smaller than in 1892, the diminution being due to recent regulations according to which the more elementary works are not sent up. There has been no falling off either in the number or in the merit of the more advanced drawings, paintings, and models submitted. Works submitted for examination.

27. *Local Scholarships, Royal Exhibitions (Art), National Scholarships (Art).*—There were 295 competitors for the 20 Local Scholarships and the 10 Royal Exhibitions. Of these Local Scholarships 4 are being held at the Municipal School of Art, Birmingham, 2 at the National Art Training School, 2 at the School of Art, Leeds, 1 at the Hartley Institution, Southampton, 1 at the Goldsmiths' Company's Technical and Recreative Institute, New Cross, London, 1 at the School of Art, Richmond, 1 at the Gray's School of Art, Aberdeen, 1 at the School of Art, Macclesfield, 1 at the Royal Female School of Art, Bloomsbury, London, 1 at the Metropolitan School of Art Dublin, 1 at the Durham College School of Art, Newcastle-on-Tyne, 1 at the Technical College School of Art, Bradford, 1 at the Camden School of Art, Holloway, London, and 2 at the School of Art, Nottingham. The 10 Royal Exhibitions are being held at the National Art Training School, to which 7 new National Scholars were also admitted. Scholarships and Exhibitions.

28. *Local Exhibitions (Art).*—Three Local Exhibitions, towards each of which the Department provides 25*l.* per annum on the locality contributing a similar amount, were awarded last year. These are being held at the National Art Training School.

29. The payments on results amounted to 52,523*l.* as against 48,647*l.* in 1892. The average payment per student under instruction in 1892 was 8*s.* 4*d.*, while in 1893 it was 7*s.* 8¾*d.* The payment per student examined in 1892 was 13*s.* 2¾*d.* and in 1893, 14*s.* 2¾*d.* Payments on results.

County Council Scholarships.

30. *County Council Scholarships.*—The county council for the county Palatine of Lancashire has awarded six Scholarships, the county council for the West Riding of Yorkshire two Scholarships, and the county councils for the North Riding of Yorkshire, for Essex, and for Durham have each awarded one Scholarship, the eleven Scholarships being held at the National Art Training School, London.

Mulready Prize and Stock Prize.

31. *Mulready Prize and Stock Prize.*—The Council of the Society of Arts, under the terms of the Mulready Trust, and of the Stock Trust, offered for each of these prizes a gold medal, or instead of a medal a sum of 20*l.*, to be competed for by students of Schools of Art at the National Competition.

The Mulready Prize was won by William J. Smith, of the Leicester School of Art. The Stock prize was won by William Amor Fenn, of the Goldsmiths' Institute School of Art, New Cross, London.

Art instruction in the Colonies and Dependencies.

32. Works have again been submitted to the Department for examination from New South Wales, South Australia, New Zealand, South Africa; and the Isle of Man, Jersey and Guernsey. As the Vote for the Department does not apply to these places, the expenses of examination are borne by the local authorities. The results for these are given in a table at p. 175.

Art Class Teachers' certificates.

33. The number of Art Class Teachers' certificates issued during the year was 422, besides 100 Art Masters' certificates of the first group, 17 of the second group, 2 of the third group, 1 of the fourth group, 1 of the fifth group, and 8 of the sixth group, during the past year.

A table showing the results of the Examinations of Schools and classes of Art throughout the United Kingdom in connexion with the Department in 1893 is given in the Appendix B, p. 40.

Reports of Examiners on the 3rd Grade Art Examinations.

34. Extracts of general interest from reports by the Examiners on the personal Examinations in Art are given below. The full reports which contained, in addition, criticisms on the works of individual students have been circulated to the schools :—

Freehand Drawing of Ornament.—*Examiners: Mr. James Clark, Mr. S. B. Carlill, and Mr. Paul F. Maitland.*

The increase in the number of papers is not accompanied by any general improvement in the quality of the work. Many drawings are so bad, that it is evident that some students who have attempted this examination are quite unprepared to sit for the advanced stage.

Oblique views of the cast in certain drawings, show that "groups of more "than three or four candidates" must have drawn from one cast. Many papers are crowded with hastily scrawled representations of more than the "twelve inches of the ornament," or the "single scroll" asked for.

Prevailing faults are those of false proportion in leading curves and masses, of non-continuity in curvature, and of lack of character in foliation. The

foliation is too often rendered in the style peculiar to the Madeleine scrolls, when the leafage of the cast represented is of an entirely dissimilar nature.

Perhaps the worst kind of drawings are those in which a hard "wire" line without gradation, is used throughout.

Model Drawing.—*Examiners: Mr. James Clark, Mr. S. B. Carlill, and Mr. Paul F. Maitland.*

The work in this subject shows a general improvement.

Though the total number of drawings is smaller than that of last year, the decrease is almost wholly confined to the inferior work.

A prevailing fault in the drawings submitted, is noticeable in the treatment of horizontal surfaces. These are often represented as though viewed from a station point higher than that employed for other parts of the group. Many candidates have given less attention to the drawing board upon which the group rests and to the general shape of the group, than to isolated models and parts of the group.

The Examiners are glad to note that eccentricities in the method of shading are not so numerous this year as previously, but in the definitions of contours only a few have attained a happy medium between vagueness, and a hard conventional outline.

Drawing in Light and Shade from a Cast.—*Examiners: Mr. James Clark, Mr. S. B. Carlill, and Mr. Paul F. Maitland.*

There are but few really bad drawings in this subject.

The selection of casts has frequently not accorded with that prescribed in the Syllabus; and this has been to the disadvantage of the candidates.

Many drawings lose in effect through badly arranged lighting for the casts. Sometimes the light appears to come from immediately above the cast, sometimes from beneath, and frequently from more than one direction.

Black and heavy shading is too prevalent.

In several drawings the tone of the shading is so faint as to almost entirely prevent the Examiners from awarding marks for treatment of shadow.

Perspective (Elementary and Advanced Stages).—*Examiner: Mr. E. S. Burchett.*

Speaking generally, the perspective papers are good, especially in the Elementary Stage.

I am sorry, however, to have to report that several of the papers bear evidence of cramming.

Design (Elementary Stage).—*Examiner: Mr. Lewis F. Day.*

It is really astonishing how many candidates have done what seemed good to them, and not at all what was given them to do. It cannot be too plainly understood that the conditions laid down are to be observed, and that only those who observe them faithfully have any chance of passing.

With regard to the four alternative schemes suggested in the examination paper, it is sometimes impossible to determine which of them the candidate had in his mind, if any; and quite frequently the Examiner had considerable difficulty in determining which scheme was supposed to have been adopted. Sometimes it is only through faith in the good intentions of the candidate that the Examiner could give any marks.

Any pattern in which the stem is twisted at all, or the leaves cross, goes with many candidates for an interlacing pattern; whereas, of course, they were expected to understand something in the nature of braiding, or of Celtic or Byzantine strapwork. By way of geometric border many give us merely a diaper of geometric ornament.

With regard to pencil drawings, the Syllabus states that the work should be in water colour, *but the one thing that strikes me as characteristic of the exercises is the casual way in which attention has been paid to instructions.* It is precisely in this elementary stage of design that it seems to me more than ever essential that obedience to conditions should be enforced. It is in this stage, too, that masters should insist upon clean and careful drawings. One cannot expect of the beginner originality or facility; but he can be neat. He should

be taught, too, to lay in a clean wash of colour, and to express his forms in a flat wash, without reliance upon pencil outline, upon which so many of the exercises sent up depend. He should also be cautioned not to attempt too much. Slapdash and slovenliness will not be mistaken for facility.

Not much is asked of the student at this stage; but it is expected of him that he should do the little that is asked of him as well as he can; and if he wants to pass the examination he may be advised to devote a few minutes to the perusal of the Syllabus previously and of the Instructions on the examination paper, in order that he may know what he has to do, and then carefully and conscientiously do it.

Design (Advanced Stage).—*Examiner: Mr. Walter Crane.*

Question No. 1.—Wall Paper.—The answers under this head were not distinguished by any very remarkable ability or originality; in fact, considering the amount of attention now given by designers to this kind of design it seems curious that better results are not forthcoming.

In most instances a small scale sketch to show construction on a system of repeat of pattern was given as well as the large detail, though in others it was left out; and sometimes where given the sketch was so vague as to be of little or no use. The repeat of the pattern was in other cases not completed or tested, and its junctions not fully demonstrated. The method of designing the repeat on a diamond plan was frequently adopted, but there was a tendency towards building an informal structure of leaves on scrolls upon the formal plan of keeping the edges arbitrarily within the diamond. Thus the result was often, instead of an organic and united pattern, an informal design cut into the lozenge-shaped segments of a diaper without being either a true diaper or an "all over" repeating pattern.

The value of a subsidiary filling on the field of the design to unite the larger masses of lines was not often recognised.

Question 2.—Repeating pattern for some fabric or hanging.—As a whole the papers were not specially remarkable either for ornamental inventiveness or technical adaptability.

Question 3.—Borders (Miscellaneous).—The designs as a whole showed perhaps a greater amount of variety and capacity than in the other classes.

The difficulty of designing the corner in a border was apparent, of course, and only occasionally successfully conquered. The object of the design was not always stated on the paper, and was often more or less conjectural; but the designs which showed good knowledge of technical requirements and were well adapted to process of manufacture were by no means always distinguished by the best taste and invention.

Question 4.—Lunettes.—The drawings showed a fair average of ability in spacing, if but little originality. The tendency towards a straight central stalk, often meagre and running to a point at the centre at the spring of the pattern, was too generally offered as a solution of the problem. There was also a preponderance of more or less clumsy variations of the Italian renascence type of ornament—a type, be it said, which requires the utmost delicacy and refinement of treatment, as well as a playful invention to make it endurable. No doubt at its best and in its original forms it does afford severe tests of draughtsmanship, but as a source of inspiration for ideas of design and ornament it is almost hopeless, especially for young students who need a more organic and vital stimulus.

Some few of the papers were not according to the requirements, being only in pencil, and in others the measurements to scale were inaccurate.

Design, Honours.—*Examiner: Mr. Walter Crane.*

Question No. 1.—The answers to this question—an appropriate scheme of decoration for a school wall—showed, generally speaking, a want of sense of scale in ornament and architectural proportion, and a very imperfect perception of the ornamental use of figures, as well as want of power of drawing the same.

Others, again, though given with some care as architectural drawings (elevations), with sections of mouldings, showed but little invention or appropriateness.

There were others in which parts, such as separate panels, had merits far above the scheme as a whole.

ANATOMY.—*Examiner: Mr. Arthur Thomson, M.A., M.B.*

The method adopted in the conduct of the Examination in Anatomy during the present year seems a distinct advance on that hitherto employed.

By the use of sketches the Examiner is at once able to ascertain whether the candidate has acquired such a knowledge of the subject as may prove useful to him, whilst the student's mind is not burdened with the technical terms necessary to render a written description intelligible.

Whilst a considerable number of candidates were unable to fulfil the requirements of the examination, a large proportion of those who entered displayed an intelligent appreciation of the requisite details.

Comparatively few students attempted to answer the question on "Proportion." This is to me the more remarkable, as I would have thought that this was essentially a matter of importance to the Art Student, and one, a knowledge of which, he might reasonably have been expected to possess; the more so as "proportion" is an important topic, coming within the province of many studies in Art besides that of Anatomy.

Excepting in regard to this point, the questions have been on the whole, fairly well answered, the work of certain candidates displayed not only a remarkable familiarity with the details of anatomical structure, but also sketches of no mean artistic merit.

ARCHITECTURE.—*Examiner: Professor T. Roger Smith.*

It is not considered, speaking generally, that the very considerable increase in the number of candidates has been accompanied by a falling off in the average quality of the work done; if anything, the contrary is the case as regards the advanced students.

In the report on work done in 1892 allusion was made to a good deal of inaccuracy in the written answers, and an undue preference given to such answers over drawings or sketches. This defect has certainly very perceptibly diminished this year. The majority of the written answers are not unduly long or vague, and many of them are accompanied by, or are supplemental to, clear sketches or drawings.

It were well if a report in the same tone could be furnished of another subject on which last year (and not for the first time) there was occasion to report unfavourably. Reference is made to that very important part of architectural training—the drawing of the classic orders.

The examination of the students' work shows that a majority of them have learned the proportions of the orders, according to the painfully minute divisions into modules and minutes originating with older Italian writers and to be found in some text-books. To remember these is an exercise in mental arithmetic, not a study of art. If the student happens to recollect his figures, and make no mistake in applying them, the proportions come out right; but if he happens to have a bad memory for figures, or to make a slip of any sort, he draws a monstrosity; and on this system the eye is not sufficiently trained to enable him to detect that his proportions are wrong, and he finishes up his work without detecting his error.

It is very strongly suggested, not that the orders be neglected, for there is no study equal to them for teaching a sense of proportion and the value of it, and a familiarity with refined ornament, but that the Italian arithmetical scheme be proscribed, and that the students learn only with regard to each example the proportions which the main features should bear to the diameter of the column, and no more, and be made to fill in the rest by eye.

It is desirable also, as far as practicable, to draw the orders from models in preference to drawings, and that the whole shaft of the column be shown in the drawing made by the student, not, as is often customary, the top and foot only.

A considerable number of the drawings (made from recollection) of existing buildings, or parts of them; especially those contributed by students who are marked "first class" or "excellent," are to be very highly commended.

Indeed, the general quality of the work done by the bulk of those students is very satisfactory, and higher marks have been obtained this year than last.

Architectural Design.—*Examiner: Professor T. Roger Smith.*

The circumstances of the examination are this year unusual, as two different forms of syllabus were in force, and a choice of problems was given the candidates. Under No. 1 the candidate, as in former years, had the accommodation and other requirements of a supposed building set before him, and had to make a design to fit them. Under No. 2 the outline of a plan and section were supplied, and the candidate was required to treat them by clothing them with architectural forms.

Candidates were free to choose between the two.

Practically, in setting the problems, the aim has been to give equal opportunities for showing their skill to all the candidates.

Candidates were left free to select the style that they could work in best, and a very large proportion selected some phase of transitional architecture (like Elizabethan) or one of the many extremely free (not to say debased) versions of Renaissance now in use in England. This is dangerous ground for an unskilled artist to occupy, and in many cases in the designs under notice, the liberties taken with the usual architectural features and combinations, go beyond what can be fairly admitted, and have degenerated into licence. This is to be regretted, especially in students' work, as it is hardly possible for architectural work to be successfully designed unless the designer has for a ground-work sound knowledge and a trained and cultivated taste, and has learned what liberties he may safely take with accepted forms and what he may not. It is feared that a considerable proportion of those designs which were not successful in getting high marks show that their authors either have not received this kind of training, or have not profited by it.

It is pleasant to turn to the good work submitted by the more advanced students.

Principles of Ornament (Elementary and Advanced Stages).—*Examiner: Professor G. Aitchison, A.R.A.*

A great improvement is shown by students in this examination over that of 1892. A fair knowledge of geometry and neatness in drawing the diagrams are shown in a large number of the papers. Considerable skill in adapting ornament to a given shape, in making creditable designs, and in accurately drawing plants and flowers from memory, has been shown by the advanced candidates.

The elementary forms, the laws, the classes, and styles should be learnt by heart from the syllabus, and the substance of the remainder be known.

The laws of ornament should not be illustrated by furniture, pots and pans, shields or architecture, but by examples of ornament.

Balance is too frequently mistaken for *symmetry*, while *subordination* cannot be well illustrated from small repeating or alternating ornament, but from the ornament of large panels, or from scrolls.

Repetition, as instanced by the repeating of one unit of ornament, is too little known; and *series*, which is best illustrated by texts of ornamental writing, or twigs with a series of leaves growing on them, is mostly confined to the extreme case of the beads and real.

The meaning of proportion is not fully comprehended, and in the examples of ceilings, floors, walls of rooms, doors, panels, and articles with borders, is mostly conspicuous by its absence.

Students should be taught the laws of ornament from leaves, flowers, and plants. The smooth-edged oval leaves of some sorts of laurel make an excellent illustration of balance, for though the leaf looks symmetrical, it is not, one side being more convex than the other, and this is balanced by the central rib. In the same way careful drawings of a few snail shells and other spiral shells would give much more interest to the Ionic volutes, and would impress the students with a more accurate idea of what a spiral is.

The supreme importance of dividing spaces harmonically should not be overlooked, as so many things ornamented have at least one border all round

them. Want of observation is noticed in the answers to "the division of the side of a room," where the skirting was often quite forgotten.

Some of the sketches from memory of natural flowers cannot be too strongly praised, but the conventional patterns made from them are too often very poor.

The Figures of Men and Animals.

The study of this subject involves the study of anatomy, and also of the positions into which men and animals put themselves, and is in consequence, when well done, of a much higher grade than floral ornament, but those figures that have no semblance to man or beast are of no value. Figures of men and animals should not be attempted by the ignorant.

PAINTING FROM STILL LIFE.—*Examiners: Mr. W. F. Yeames, R.A., and Mr. John Parker, R.W.S.*

The marked attention to drawing, and the simple and direct manner of laying on the colours, have raised the general standard of work above that of former years.

PAINTING ORNAMENT IN MONOCHROME.—*Examiner: Mr. Lewis F. Day.*

The works sent in number 1,050 as against 860 last year. A certain proportion of these stood no chance of passing, some because the candidates had not observed the rules laid down or had not done enough, some on account of inadequate execution.

It has been endeavoured year by year to make the instructions to candidates more precise; and it seems this year to be more generally understood that Painting Ornament in Monochrome is an exercise in which the student has to show his competence in strictly decorative painting. And the rules have, on the whole, been more intelligently observed.

It is much more generally understood this year that "grisaille" should be greyish, more or less; but one notices a tendency to work in shades of *red*, which scarcely come under the description.

As to the *rendering* of the design (with regard to which considerable latitude is allowed), it appears necessary to say that a flat, or almost absolutely flat treatment, whilst it may indicate a certain decorative instinct in the student, and would accordingly take its chance of passing, could by no possibility be ranked "First Class," for it affords no test of *painting* in the sense of the syllabus.

Throughout there is a commendable restraint in the use of cast shadows.

Although there is no work submitted quite so good as the best of last year, the general level alike of taste and execution is certainly higher; and this applies even to those exercises which fail to gain a second class. The quality of the work improves year by year; and this year shows an advance upon last year.

DRAWING FROM THE ANTIQUE.—*Examiners: Mr. W. F. Yeames, R.A., and Mr. E. Crofts, A.R.A.*

The average in the candidates' work at this examination is well maintained in spite of the large increase in the number of exercises.

DRAWING FROM THE LIFE.—*Examiners: Mr. W. F. Yeames, R.A., and Mr. E. Crofts, A.R.A.*

The work this year is a steady advance on that of former years. The candidates in a large number of cases show an appreciation of the advantages to be derived from the study of the human form. The execution of the greater number of the drawings is also more simple and direct, only a few schools adhering to the method of shading or blackening the whole figure, so much deprecated in past years by the Examiners.

DRAWING THE ANTIQUE FROM MEMORY.—*Examiners: Mr. W. F. Yeames, R.A., and Mr. E. Crofts, A.R.A.*

The number of exercises is larger this year than in previous ones, and the Examiners are also pleased to see that their execution is direct and free from

mannerism. Much as careful and delicate drawing is desirable in these exercises, higher marks are given to those which convey an expression of the Students' good recollection of the original statues rather than to those in which good drawing is not backed by memory.

HISTORIC ORNAMENT.—*Examiner: Mr. J. H. Pollen, M.A.*

The papers of the candidates in this year's examination in Historic Ornament show a creditable record. The number to which high marks are awarded bears a large proportion to the whole, and several are marked as "Excellent."

Very few papers are so poor in replies as to be worthless. In this respect the present examination has brought out a very fair amount of knowledge on most of the subjects over which it ranges. Nearly all the candidates attempt the full number of questions allowed, and with more or less success.

The sketches are in several instances "good," in more "fair;" but there is room for improvement. It is, however, but just to allow that in a large number of papers sketches, of little excellence as drawings, yet suffice to explain the candidate's meaning and show that he knows what he writes about.

Learned Latin words are a stumblingblock to the candidates. If equivalent English terms could be used by lecturers, the subject taught would be as well understood; and some errors and much confusion would be avoided in the replies to some questions in these examination papers.

MODELLING DESIGN, ELEMENTARY STAGE.—*Examiner: Mr. Lewis F. Day.*

Generally it may be observed that anything like invention or originality is extremely rare. Too many of the students seem to be content with a mere reflection of some familiar and, it may be, not very inspiring bit of Renaissance arabesque.

Candidates seem to have no notion of mouldings suitable to frame their ornament, still less of running them with anything like certainty. They cannot too soon be taught that some sort of precision is absolutely indispensable in the case of mouldings.

It is perhaps too much to expect of an elementary class breadth or largeness of treatment; but the students might be taught from the very beginning not to fritter away the surface of their design, as is done in some of the works sent up.

Some of the works have suffered in the casting. But as this is the first time such work has been expected of the candidate, allowance has been made for his inexperience; and wherever the failing appears to be in the cast, he has had the benefit of what doubt there might be, and is judged according to what his clay model may reasonably be supposed to have been.

Altogether, considering the elementary nature of the exercise and the short time given for it, the work has been creditably done, and some of it, as I have said, is excellent.

MODELLING DESIGN (ADVANCED STAGE AND HONOURS).—*Examiner: Mr. Hamo Thornycroft, R.A.*

The standard of the works submitted by candidates for Honours seems to be lower than that of last year in the corresponding subject of modelled figure compositions.

With the exception of some half dozen the works are very poor in design. Where ornament is intermingled with the figures, it is not carried sufficiently far. The sketches with which candidates were required to supplement their models were for the most part wholly inadequate, some being so slight that they could not have taken more than a few minutes to do.

The models for the advanced stage were, on the whole, on a higher level of performance than those for Honours. At the same time many of them were so feeble that the candidates who did them should not have been allowed to enter for examination.

MODELLING FROM THE ANTIQUE.—*Examiner: Mr. Hamo Thornycroft, R.A.*

The average quality of work done at the examination in this subject did not fall below the level hitherto attained notwithstanding the considerably increased numbers of candidates this year.

MODELLING FROM THE LIFE.—*Examiner: Mr. Hamo Thornycroft, R.A.*

The modelled reliefs from the life were generally good. The Examiner, however, directs attention to the great importance of placing good life models before the candidates, as in many centres indifferent models appear to have been engaged for the purposes of this Examination.

35. *National Competition of Schools of Art and Art Classes,* 1893.—The works submitted for the National Competition were examined by the following gentlemen, under the general superintendence of the Director for Art, T. Armstrong:—Professor G. Aitchison, A.R.A.; H. H. Armstead, R.A.; E. F. Brewtnall, R.W.S.; T. Brock, R.A.; Alan S. Cole; Hon. John Collier; Walter Crane, A.R.W.S.; E. Crofts, A.R.A.; Lewis F. Day; E. Onslow Ford, A.R.A.; A. C. Gow, R.A.; H. Graham Harris, M.I.C.E.; T. G. Jackson, A.R.A.; G. D. Leslie, R.A.; W. Morris; F. Shields, R.W.S.; J. J. Stevenson; Hamo Thornycroft, R.A.; W. F. Yeames, R.A. National Art Competition.

The number of Works selected for the National Competition was 3,713.

The names of the students to whom Gold Medals were awarded are given at p. 189, Appendix B. A complete list of the awards has been issued to the Schools. They consisted of 11 Gold, 50 Silver, and 152 Bronze Medals, and 366 Prizes of Books gained by general students; together with honorary awards of 4 Gold, 26 Silver, and 40 Bronze Medals, and 99 Book prizes obtained by students of the Training Classes of the National Art Training School. Examiners' award

The complete reports of the Examiners on the works having been sent to the schools, it is only necessary to give here such extracts as are of general interest. Extracts from Examiners' Reports.

MODELLING.—*Examiners: H. H. Armstead, R.A.; T. Brock, R.A.; E. Onslow Ford, A.R.A.; Hamo Thornycroft, R.A.*

Busts from the Antique.—The works in this class are considered, as a whole, to be rather better than those presented last year.

Heads from Life.—In this class the Examiners notice an improvement on previous years in the works submitted by the National Art Training School.

Modelling the Figure from the Antique in the Round.—Although no high awards have been made in this class, it shows some improvement.

Relief from the Antique.—Works in this class from the National Art Training School are, as a whole, unsatisfactory. With almost unlimited time at the command of the students their modelling should be more complete and the originals more seriously studied.

Modelling Anatomical Studies.—The studies in this class from the National Art Training School are very incomplete especially in the extremities.

The Examiners consider that portions only of limbs should not be anatomised; for instance, if it be a question of studying an arm, the whole limb with the hand and part of the clavicle should be included in the work.

Modelling Ornament from the Cast.—Generally, the Examiners think that the modelling in this class is excellent.

The Examiners consider that the small acanthus scroll is not a good example for study.

Modelling Ornament from Drawings or Photographs.—Although it is not thought necessary to give any high awards in this class, the Examiners note a decided improvement on previous years.

Design with Figure.—In this class, Design with Figure, the Examiners find that, speaking generally, the figures are too incomplete.

ANTIQUE FIGURE, DETAILS, &c.—*Examiners: W. F. Yeames, R.A.; E. Crofts, A.R.A.; A. C. Gow, R.A.*

Antique Figures.—The Examiners find that the work in this class is certainly better than that of last year.

The work in this subject from the National Art Training School shows improvement generally.

Drawings of Heads, Hands, Feet, &c.—The Examiners regret to notice that this year there is a still greater falling off in this division of study than last year, when they had occasion to make a remark to the same effect.

DRAWING AND PAINTING FROM THE LIVING MODEL.—*Examiners: W. F. Yeames, R.A.; A. C. Gow, R.A.; the Hon. John Collier.*

Hands, Feet, &c. from the Life.—The Examiners are glad to find a decided improvement in quality in these works.

Heads.—The Examiners have again to condemn the excessive blackness of the greater number of these drawings which have been submitted to them.

Paintings of Heads.—The Examiners give but few awards for these works. With hardly an exception the work is bad.

Life Sketches.—The Examiners are pleased to note an increase in the number of these works from provincial schools. The Examiners are glad to note an improvement in the Life Sketches from the National Art Training School.

Drawings of Figures from Life.—The Examiners think that these drawings are generally rather better than last year; and although the execution on the whole is of a simple character, there is a tendency shown in drawings from certain schools to tricky eccentricity, which leads to insincerity in delineation of form. Again, in some of the best drawings there is an unfortunate revival of the laboured stippling method. Though not many works of high merit are submitted by the National Art Training School, the general run of work is of a higher quality than last year.

PAINTING IN MONOCHROME, DRAPERY, AND ANATOMY.—*Examiners: W. F. Yeames, R.A.; A. C. Gow, R.A.; E. Crofts, A.R.A.*

Monochrome Painting of Figure from the Antique.—The Examiners again regret that the number of studies in this subject is not larger. The average of work is somewhat higher than that of last year.

Monochrome Painting of Ornament from the Cast.—The Examiners again notice a falling off in quality in this work.

Anatomy.—In this class of work a want of clearness and intelligent rendering is remarked on generally by the Examiners, who again recommend a more diagrammatic method.

Drapery arranged on the Antique Figure.—The Examiners note a good deal of careful work, but there is not so much judgment and taste shown in arrangement of drapery as last year.

The same remark applies to work from the Training School; and as regards one or two works, the Examiners object to the scale adopted for these

drawings as it is so large that the whole of the figure cannot be represented in them.

Painting from Still Life.—*Examiners: G. D. Leslie, R.A.; W. F. Yeames, R.A.; E. F. Brewtnall, R.W.S.*

Painting Views of Buildings.—The Examiners are pleased to see an increase in the number of paintings of old buildings, &c., in the vicinity of the schools where they were produced; and they think it very desirable that students should be encouraged to make studies of this character where possible. Apart from the excellent opportunities they afford for study of tone and colour, they will always be interesting as records of the actual state of the buildings at the time the paintings were executed.

Certain studies in this division are commendable for the manner in which the students have made use of their knowledge of perspective.

Painting Flowers and Still Life without Backgrounds.—The Examiners feel that the work in this class is very good and wholesome in method.

Designs for Enamels, Tiles, Pottery, Metal-Work, &c.—*Examiners: W. Morris; Walter Crane. A.R.W.S.; Frederic J. Shields, A.R.W.S.*

Book Illustration.—The Examiners observe that the interest which has obtained in this class of work during the last few years is fully maintained. A considerable number of designs are submitted which are remarkable for their inventive and decorative qualities.

Pottery.—There appears to be a general improvement in this class. For plaques and plates many designs are submitted which are not of much distinction, but on the whole they are of fair average.

Metal Work.—The designs for metal work are above the average of previous years, but very little originality is seen.

Iron Work.—In this section the work is up to the average. The Examiners note that the students have a preference for the style of the last century; they think it would be well that earlier examples should also be studied.

Designs.—Textiles, Hangings, Laces, Carpets, &c.—*Examiners: W. Morris; Walter Crane, A.R.W.S.; Lewis F. Day; Alan S. Cole.*

Subjects 14–22 *and* 14–23. *Plant from Nature with Colour Designs.*—The Examiners note that in many cases the students have spent too much time in making an unnecessarily elaborate drawing of the flower. All that is wanted is a sketch showing the essential characteristics of the plant. The same remark applies to the studies from the National Art Training School, where also students spend too much time over the flower, and appear to have but little interest in the design. It would be better to make a general sketch of the flower and careful notes in sharp outline of details, suggestive of ornament.

Lace, hand-made, and lace-like Embroideries.—The designs for hand-made laces seem generally better, and show indications of fresh departures in styles.

Curtains.—The designs for machine lace curtains are very poor and commonplace.

Mosaic.—The Examiners are much pleased with the designs for mosaic decoration for which prizes are given; the sub-division of several of them by strap work of good proportion struck the Examiners as happy, and the tesseration is good.

Studies of Historic Ornament and Designs.—Wall Papers, Internal Decorations, Tiles, Stained Glass.—*Examiners: W. Morris; Walter Crane, A.R.W.S.; Lewis F. Day; and Frederic J. Shields, A.R.W.S.*

Subject 22B.—The Examiners notice that all these exercises from various schools are almost without exception in the same style of ornament, and one which is not necessarily the best. They think the attention of students should be drawn to other styles, as, for example, low-relief panels of Byzantine work. Attention should be paid to quality of line.

Historic Ornament.— The Examiners are glad to note that many candidates have chosen with more purpose typical specimens to exhibit some phase of ornamental development, although few of them were good enough for award. There is less tendency than formerly to elaborate the texture and accidental effect of the objects studied, and a clearer aim is displayed in seeking the essential features of design in the object. Some of those who have done the largest series would have done better if they had produced less numerous and more careful studies.

The selection by certain students of the National Art Training School of merely modern work to illustrate historic styles is inappropriate to the purpose of such studies, as it scarcely comes within the intention of the term historic as here used. A large proportion of the works in this subject by students of the National Art Training School was very indifferently executed.

Wall Papers.—The few works in this section are very much below the standard. It appears that this subject is being neglected. The Examiners regret to notice this, as surface designing for wall papers is an important study. The works from the National Art Training School come under this general condemnation, and no awards are made for them.

Decorations for Interiors of Houses, &c.—In regard to the designs sent in for the Stock prize, the Examiners consider that the subject was very difficult, and a very severe test in fact for students. The students to whom awards are made produced more drawings to explain their designs than were required by the rules for the competition. Had they concentrated their attention on the mere requirements of the competition their work might have been more successful.

Frames.—The Examiners would like to see more designs for frames.

Architectural Design.—*Examiners: Professor G. Aitchison, A.R.A.; T. G. Jackson, A.R.A.; J. J. Stevenson.*

Original Design.—The Examiners recommend that students be encouraged to explain designs by plans, sections, and details rather than by ornamental geometrical drawings.

They also consider that elaborate shading is wasted on geometrical drawings; it should be confined to perspectives.

Mechanical Drawings.—*Examiner: H. Graham Harris, M. Inst. C.E.*

The average merit of the drawings this year has not improved in any way, and the expression of disappointment with which I found it necessary to commence my Report last year must be repeated on this occasion.

Local fees.

36. The amount of the fees received from students by Schools of Art and Art Classes in the last three years has been as follows:—

Years.	Schools of Art.	Art Classes.	Totals.
	£ s. d.	£ s. d.	£ s. d.
1891 - - -	35,993 9 7	14,108 9 5	50,101 19 0
1892 - - -	33,276 4 8	14,757 10 9	48,033 15 5
1893 - - -	34,515 2 1	12,900 7 11	47,415 10 0

National Art Training School.

37. *National Art Training School.*—The number of students in training during the session ending 28th July 1893 was 39, and Pupil-teachers 3, of whom 1 is unpaid, and of National scholars 19. Eleven Schools of Art have been supplied with trained masters, and 8 National scholars have left the school, having completed their course of instruction. 189 students have

attended the schools without payment of fees, and 29 at half fees, these privileges having been gained by success in their studies. A total of 558 students attended the schools, viz.:—322 females and 236 males, a decrease of 4 on the previous year. The fees amounted to 1,880*l.* 12*s.* 11*d.*, a decrease of 61*l.* 0*s.* 4*d.* on the previous year.

38. 34 Art Master's certificates were obtained by students of the school as well as 21 Art class teacher's certificates and 8 Elementary certificates. The prizes gained comprised 5 gold, 38 silver, 47 bronze medals, and 127 national book prizes in the National competition and school examinations, and 20 Queen's prizes in the Art examinations. Three travelling scholarships of 50*l.* each were awarded after competition among the free students in the school. The first place in the competition was taken, for the second time, by J. H. Parkyn. A special certificate of his success being awarded to him, he waived his claim to the Scholarship.

The report of the National Art Training School is given at page 213.

Summer courses for Art Masters, &c.

39. Summer courses of instruction for Art Masters and students were again given in the Study of Ornament and Design, Modelling and Drawing from Life, and Casting and Moulding. There were 170 applicants for admission to these courses, of whom 87 were given permission to attend. 50 attended the course of instruction in the Study of Ornament and Design, under Mr. R. Lunn, as well as a course of lectures given by Mr. J. Ward, of the Macclesfield School of Art. The classes for Modelling from the Life numbering 21, and for Drawing from the Life 16, were instructed by M. Lantéri and Mr. Morton respectively. Demonstrations in casting from gelatine and in piece moulding were given to all the students by Signor E. Cantoni. Mr. Miller was in charge of the detailed arrangements. The regularity of attendance and conduct of those attending the classes were entirely satisfactory.

Grants for buildings, fittings, &c.

40. *Grants for Buildings, Fittings, Examples, and Apparatus.*—Building grants were made during the year 1893, to the following Schools of Art, viz.: Plymouth, 500*l.*; Montrose, 231*l.* 15*s.*; Weston-Super Mare, 413*l.* 15*s.*; Brighton, 500*l.*; Ashton-under-Lyne (Heginbotham), 500*l.*; Carmarthen, 338*l.* 15*s.*; amounting altogether to 2,484*l.* 5*s.* Grants for examples and apparatus were made to 27 schools or classes amounting in the whole to 213*l.* 4*s.* 6*d.* The grants amounted in the previous year to 2,086*l.* 17*s.* 6*d.* and 1,068*l.* 9*s.* 1*d.* respectively. The grants for apparatus and examples are now abolished except in Ireland.

Further details with regard to Art instruction will be found in the tables in Appendix B., page 30.

III.—South Kensington Museum and Bethnal Green Branch Museum.

New buildings for the South Kensington Museum.

41. We regret to have to report that it has been found necessary again to defer the commencement of the new buildings for the South Kensington Museum, the design for which was selected in July 1891. The great inconvenience caused by lack of adequate space has, however, been to some extent lessened by our having had placed at our disposal a gallery connecting the east and west galleries on the ground to the west of Exhibition Road, which are leased from the Royal Commissioners of the Exhibition of 1851, and occupied at present, the one by the India Museum, the other by part of the Science Collections. The cross gallery above referred to was built by the authorities of the Imperial Institute, from whom the upper floor is leased by Her Majesty's Office of Works. It is proposed to remove to this cross gallery the examples of Persian, Chinese, Japanese, and other Oriental Art from the South Kensington Museum, thus bringing them into proximity to the Indian Collections.

Death of Sir Philip Cunliffe-Owen.

It is with much regret that we have to record the death of Sir Philip Cunliffe-Owen, K.C.B., K.C.M.G., in March last, shortly after the close of his long official connexion with the Museum which began in 1854, while the collections were exhibited in Marlborough House. In 1857, when they were removed to South Kensington, he became Deputy-General Superintendent of the Museum, and in 1874, on the resignation by the late Sir Henry Cole of the office of Secretary of the Department and Director of the Museum, Sir P. C. Owen was appointed Director, a post which he held till June 1893 when he retired under the age clause of the Order in Council of August 1890.

Besides his work at the Museum Sir P. C. Owen took a prominent part in the various great International Exhibitions in England, America, and the Continent, beginning with the Universal Exhibition at Paris in 1855; and he interested himself most actively in numerous schemes for the promotion of art instruction throughout the Empire, more especially in the establishment of local museums in various parts of the Kingdom. In this work his genial disposition, combined with his power of securing the hearty co-operation of those with whom he was engaged, enabled him to be of great service to the country.

Appointment of two Directors.

In view of the rapidly increasing extent, variety, and importance of the Science and of the Art collections we considered it desirable on the retirement of Sir P. C. Owen that there should be two Museum Directors, one for each branch. To this proposal the Lords Commissioners of Her Majesty's Treasury gave their assent. Major-General Festing, F.R.S. (late R.E.), who has for many years been one of the Assistant Directors of the Museum, has been appointed Director of the Science branch of the Museum and as he will continue in charge of the heating, lighting, cleaning, &c., of the Museum generally, the Assistant Directorship

vacated by his promotion will not be filled up. Dr. J. H. Middleton (Slade Professor of Fine Art and late Director of the Fitzwilliam Museum in Cambridge), has been appointed Director of the Art branch of the Museum.

The Directors report that the number of visitors during 1893 was 1,174,211 at South Kensington and 591,074 at Bethnal Green, making a total of 1,765,285. This shows an increase of 228,240 as compared with the year 1892. Returns of the numbers from 1857 onwards are given on pages 247 and 248. Visitors.

ART DIVISION.

42. In forwarding the usual annual statements by the various Museum Officers in this Division, Dr. Middleton, the Director, points out that "the difficulty of arrangement is seriously increasing every year on account of want of space to exhibit the contents of the Art Museum. In spite of the additional room gained by the new cross gallery, a large number of valuable objects have to be placed where they have neither sufficient space nor light. It is to be feared that this unfortunate state of things must continue until the projected Museum buildings are completed." Inadequate accommodation.

43. Mr. C. Purdon Clarke, Assistant Director and Superintendent for Arrangement, also calls attention to the difficulty with which, during the past year, space has been provided for additions to the Museum. Congested condition of collections.

The Raphael Cartoon Gallery has been closed since the month of July, during the re-construction of the roof, the cartoons being stored, but not exhibited, in the Sheepshanks Gallery. Raphael Cartoons.

Negotiations having been completed for the transfer of the larger portion of Mr. Maudslay's collection of casts of ancient Mexican sculptures to the British Museum, a small but valuable amount of floor space has been secured in the Architectural Courts for the better display of the casts of Italian and German sculpture and architecture. Re-arrangement of objects.

The space on the ground floor of the Southern Galleries occupied by the collection of electrotype reproductions of mediæval plate and metal-work, being required for the extension of the Machinery and Mining Sections, the electrotypes of college and corporation plate have been brought back to the Art Museum and placed in a corridor near the South Court, where the general collection of plate and metal-work is exhibited.

The new entrance to the Indian Section having been completed the Architectural Collection formerly in the temporary vestibule has been re-erected, with the exception of the inlaid marble colonnade from Agra, for which, it is a matter of regret, space cannot yet be found.

44. The number of objects acquired for this division by purchase, gift, or bequest was 1,426, of which 71 were for the Indian Art Museum acquisitions.

Section. Mr. A. B. Skinner, the Keeper, reports that the following were the principal acquisitions by purchase during the year :—

A collection of old English furniture was acquired for the sum of 500*l.*, the most important specimen being the front of a coffer, carved in very high relief with subjects representing the story of St. George and the Dragon. This panel dates from the 14th century, and is very similar to the front of a chest preserved in York Minster. The model of a portion of the Sala del Cambio, at Perugia, was completed during the year by the addition of the remainder of the frescoed wall against which the *bancone* (received in 1892) stands, one bay at right angles, and a portion of the ceiling. The model had been commenced by the late Cavaliere Annibale Mariani, and was finished by Count Lemmo Rossi Scotti, at a total cost of 1,000*l.* The most important acquisition during the year was a very large and magnificent Persian carpet, measuring 34 ft. 6 in. by 17 ft. 6 in., bought for the sum of 2,500*l.* The Department was, however, assisted in this purchase by the generosity of Sir A. W. Franks, K.C.B., E. Steinkopff, Esq., William Morris, Esq., John Edward Taylor, Esq. and other gentlemen. This most remarkable work of art came from the mosque at Ardebil, and bears the date A. H. 946 (A.D. 1540), with an inscription stating that it was the work of Maksoud of Kashan. A treasure-trove has been transferred to the charge of the Museum by Her Majesty's Treasury, at a valuation of 175*l.* It consists of seven pieces of silver plate, dating from 1578 to 1696. These specimens were found in a rabbit-burrow at Stoke Prior, near Leominster, Herefordshire. A collection of Hispano-Moresque earthenware, comprising 120 specimens, was purchased for 797*l.* A Japanese room, which had been on loan for some time at the Bethnal Green Museum, was acquired for the sum of 70*l.* At the sale of the Bateman Collection, 21 works of Art were secured, including a Limoges enamel triptych, of about the year 1500, a carved ivory group of the Coronation of the Virgin, an Italian chalice enriched with enamels and dated 1365, two German silver-gilt cups and a portion of a girdle in enamelled gold : at a total cost of 609*l.* 2*s.* 10*d.* A leaf of a Limoges enamel triptych painted *en grisaille*, representing part of the subject of St. John the Baptist preaching in the wilderness was bought for 120*l.* The other two leaves had been for many years in the Museum, whilst the third leaf had been the property of Monsieur Spitzer. The principal purchase at the sale of the celebrated Spitzer Collection which took place in 1893 in Paris, consisted of the beautiful Cover of a Textus or MS. of the Gospels, overlaid with the gold plaques, and enriched with *cloisonné* enamel-work and precious stones (1,571*l.* 10*s.*). At the same sale a magnificently-worked English rim-lock, made by Richard Bickford, of London, and bearing the Medici arms, was secured for 183*l.* 14*s.*, as well as an enamelled pendent jewel in the form of a ship for 157*l.* 10*s.* At the sale of the Baron de Cosson's arms and armour, the following specimens were bought for the sum of 281*l.* 3*s.* 3*d.* : a German wheel-lock pistol, inlaid with stag-horn and dated 1579 ; an engraved steel casque of Italian workmanship of about the year 1535 ; a steel chanfron from Spain, engraved and gilt, of the first half of the 16th century ; a leather powder-flask and two priming-flasks. From the Field Sale were obtained a boxwood group of the Virgin and Child in the style of Martin Schöngauer for 88*l.* 4*s.*, and a pair of Limoges enamel salt-cellars for 518*l.* 3*s.* 6*d.*, the work of Jean Limousin, who was working in the early years of the 17th century. Sixteen specimens of Rhodian pottery were bought for 200*l.*, and a Florentine bronze bowl of the end of the 15th century cost 70*l.* A valuable collection of early textile fabrics, including stuffs woven at Byzantium, Palermo, and Lucca, as well as a magnificent altar-frontal of Lucca workmanship of the 14th century, was acquired for 948*l.* 12*s.* 4*d.* A large Brussels tapestry worked with subjects from the Court of Love, War, and Religion, was obtained for 315*l.*, and a very representative collection of German ironwork was bought for the sum of 650*l.*

The principal gifts received during the year were :—

A steeple-shaped hat of the time of James I. given by J. Seymour Lucas, Esq., A.R.A. ; a terra-cotta bas-relief of the Virgin and Child, given by

C. Fairfax Murray, Esq.; models of a tapestry and a carpet loom, given by William Morris, Esq.; a plaster ceiling from Crosby Hall Chambers, given by the Directors of the Bank of Scotland; a carved ivory figure of our Lord for a crucifix, French, early 18th century, given by Captain C. Waldo-Sibthorp; and a German enamelled earthenware stove, given by Henry Willett, Esq.

The reproductions acquired in 1893 comprised 24 in plaster and 478 in metal.

Plaster Casts.—A copy of a head of Hera, of the school of Polycleitus, discovered on the site of the temple of Hera in the Heraion near Argos, and presented by the American School of Classical Studies, Athens; a copy of the head of the bronze lion of St. Mark on the Piazzetta, Venice; the group of Judith and Holofernes by Donatello, in the Loggia dei Lanzi, Florence; a recumbent effigy of Beatrice d'Este, attributed to Cristoforo Solari, in the Certosa, near Pavia; a relief of the Virgin and Child with the young St. John the Baptist, by Bartolommeo Bellano (acquired in exchange from the Berlin Museum); a copy of a portrait in relief of Andrea Mantegna, from his tomb in Padua, a portion of the portal of the north transept of Bordeaux Cathedral, date about 1300, and a French carved wood door of the 16th century. A cast was also obtained of a fireplace, dated 1633, formerly in Crosby Hall Chambers, London.

Reproductions in Metal.—A collection of 477 reproductions of Italian, French, and German medals, cast by M. Liard.

45. *Indian Section.*—The number of visitors during the year 1893 was 288,710, as against 135,548 in 1892, showing an increase of 153,162. Mr. H. E. Acton, the Keeper in charge, reports that during the year 48 objects were purchased at a cost of 178*l.* 9*s.* 6*d.* Of these a small collection of old Newar metal work from Nepal, a collection of metal-work and glass ware formed by Lt.-Col. Cole at Bijapur, and a gold "rose" chain of the 18th century were the most important. Fourteen books were received from the India Office. Works of art were also presented by N. P. Anthony, Esq., the Misses Palmer-Lovell, Mrs. Ella Sandford, General Sir W. M. S. MacMurdo, G.C.B., and A. F. Sealy, Esq. Indian Section.

The loans to the section during the year comprise a model of a bullock cart from Mrs. Ella Sanford, a large collection of Arms, Metal-work, &c., from General Lord Roberts, V.C., G.C.B., and some carved ivory panels from Dr. J. H. Middleton.

In the course of the year a large number of Persian and Spanish carpets have been transferred from the South Kensington Museum for exhibition in the galleries on the west of Exhibition Road. The most notable is the large carpet from the mosque at Ardebil referred to above.

46. *Art Library.*—The attendance in the Art Library during the year has slightly increased, having risen to 22,951 as against 22,822 in 1892. Art Library.

Mr. Weale, the Keeper, reports as follows:—

The number of volumes and pamphlets acquired has been 1,808, 346 of which have been presented, and 1,462 purchased. The most noteworthy are:

Liedts, A. Baron. Anciennes Dentelles Belges. Antwerp, 1889–90. *Privately printed.*

Moreau, F. Album Caranda. 1879–93.

Oriental Carpets, published by the Imperial Museum at Vienna.

Virgil Solis. Biblische Figuren. Frankfurt a/m. 1560.

The number of drawings acquired has been 861, seven of which were presented. The most noteworthy are, 104 sheets of Mediæval costume drawn and coloured by Mr. Lake Price. 953 Prints have been added to the collection and 1,289 Photographs.

The new general Reading Room catalogue embodying in one alphabetical series all the books acquired before September 1890 has made good progress. The first 21 volumes, down to MUE are now at the disposal of readers.

During the past year 4,282 works have been catalogued and 5,208 slips printed. The titles of fresh acquisitions have been printed regularly every week and these weekly lists posted up in the library, so that readers are informed of and can consult any book at the latest on the Saturday of the week following that in which it is acquired. Prior to my appointment, volumes or series of volumes (Periodical publications, Transactions of Societies, &c.) no matter how many separate papers they might contain, received only one general mention in the Catalogue. Since that time every volume has been examined, and each article or paper in any way relating to art has also been catalogued independently.

Moreover, at the same time an abbreviated copy of the title of every work is prepared by the cataloguer for insertion in each of the Classed Lists to the subject of which its contents may refer. These classed lists are 33 in number, one of them is almost ready to send to the printers, and two others are in a forward state. Cut-up copies of these will be placed in the Reading Room for the use of readers, fully press-marked and kept up to date by weekly insertions.

Special provisions have recently been made for the benefit of students. A new room has been prepared for the use of those who wish to copy in water-colours or to consult rare books, prints, or photographs. Arrangements have been made so that they can avail themselves of these advantages in the evenings on which the Museum is open, while previously it was not found possible to permit the use of water-colours after dusk.

A catalogue of the Japanese books and Albums of prints in the Library has been published this year. The titles were translated and written by Mr. Kowaki, and revised and seen through the press by Mr. Strange. The catalogue of loose prints and drawings which is to form the second part of this Japanese catalogue is also nearly completed and will be published shortly. Students of ornament and designers have found very useful a series of proofs taken by means of photography from the large collection of Japanese stencils in the Library.

The re-arrangement and classification of the contents of the Bookcases is making good progress.

Dyce and Forster Collections.

47. *Dyce and Forster Collections.*—During the past year the number of visits to the joint reading room amounted to 1,041, and the issue of books and MSS. to 2,251. Fifty-three permissions to copy paintings and drawings in the collections were also granted, and an autograph "Assignment of Henry Fielding" was photographed for reproduction in a new edition of his works.

A Catalogue of the Paintings, MSS., Pamphlets, &c., in the Forster Collection, has lately been published, completing the series of five volumes of catalogues relating to the two bequests.

Mr. Richard Forster Sketchley, one of the Assistant Keepers of the Museum since 1864, who has had charge of the Dyce and Forster Collections from their arrival, and by whom these catalogues have been prepared or edited, has lately retired under the age clause of the Order in Council. We have arranged that the books and MSS. in these Collections shall henceforth be under

the charge of the Keeper of the Art Library, to be consulted there, instead of as heretofore in a special reading room; though in compliance with the wishes expressed by the respective Testators, each Collection will continue to be kept separate.

48. *Pictures in the South Kensington Museum.*—Mr. Armstrong, the Director for Art, furnishes the following report on the Pictures in the South Kensington Museum, with special reference to those recently acquired. Pictures in the South Kensington Museum.

The pictures and drawings under my charge are in good condition, and precautions have been taken for their preservation as in former years.

Among the principal additions by purchase during the past year were two water-colour paintings by J. F. Lewis, R.A., one of which represents an interior at Cairo; the other is an unfinished sketch of the entrance to the tomb of the Sultan Bajazet at Constantinople.

A caricature portrait in pastels of Sheridan by J. Russell, R.A., and three miniatures on ivory have been added to the collection; one of the latter is signed by Edward Dayes, and another by Charles Fox.

Several drawings on wood blocks have been acquired, among which the "Deposition of King Richard II." by Sir John Gilbert, R.A., may be mentioned.

Mr. James Orrock, R.I., has given another valuable oil painting, a rocky landscape by Henry Dawson, whose work was not before represented in the galleries.

The Department is also indebted to Mr. J. E. Taylor for an interesting collection of 66 water-colour paintings, including examples of the work of Glover, Havell, the two Sandbys, Edridge, Cozens, Girtin, and other eminent water-colour artists of the end of the last and beginning of the present century

Miss Elizabeth Anderson has bequeathed nine oil and water-colour paintings, principally by Clarkson Stanfield, R.A.

During the past year most of the purchases have been made with the view of strengthening the circulating collections. The arrangements of which I gave notice in the last report for having the necessary lining, varnishing, cleaning and repairing of oil-paintings in our collection done on the premises, have been carried out and have been very successful. Until the room now in use for these purposes was obtained, the pictures which required lining had to be sent to the liner's own workshop, where the risks of damage or loss especially from fire, appeared to be so great that none were sent except those which were actually suffering from remaining on their old strainers. Within the last twelve months almost every oil painting has been taken out of its frame to be examined and to have the surface dirt removed.

For the most part the oil paintings in this Museum are in a very good state of preservation, but in some of those done about the beginning of this century, when bitumen was much used as a pigment, there are cracks in the paint which disfigure the darker places by showing the ground in a reticulation of white lines. These white lines, which were especially offensive in the large picture of "Bull Fighting" by James Ward, R.A., have been tinted with tempera colours like the adjacent sound parts, but no attempt has in any case been made to fill up or conceal the cracks.

In many cases it was found desirable to remove the accumulated coats of varnish which, in course of years, had obscured the original freshness of the paint. This removal was always effected by chafing, no solvent being used. Where it was found that copal varnish, or some substance which would not give way to the friction of fingers and also where there was reasonable ground for expectation that old restoration would be found between or beneath the coats of varnish, nothing but the removal of dust or surface dirt was attempted.

Among those pictures in which the effect af the removal of the old brown varnish has been especially notable, I may mention the one by James Ward, of "Bull Fighting" (No. 220, 1871), already cited, J. F. Chalon's "Hastings" (No. 234) and the very fine landscape by G. Barrett, presented by Mr. James

Orrock. The last is especially interesting in this connection, for it was so brown as to resemble a work in sepia, whereas it has now all the delicate freshness of Barrett's best water-colour work. When the varnish was in process of removal it was decided to leave untouched, a small portion of the sky, about six inches square, so that after every other part had been effectually cleared, the contrast between the original colour of the paint, as now brought to light, and its aspect as we had hitherto known it when seen through the dark and yellow mastic, might be fairly judged. While this square of brown varnish remained a photograph was taken of the picture and Captain Abney was good enough to gauge and record by his system of chromometry the colour within the square and that of the adjacent parts of the sky from which the varnish had been removed. The record is such that the colour of each portion can at any time be exactly reproduced on a screen from certain rays of the spectrum of the electric light combined in definite proportions. I am not aware that any such scientifically accurate record of the colour of pictures has ever been achieved before.

No repainting with the object of concealing damage has been attempted in these processes, but in a few instances previous restorations, which, in course of time, have become obvious and offensive and which it would have been dangerous to remove, have been hidden or made less apparent by the use of tempera colour applied over a thin coat of mastic varnish and covered and secured by another. This can at any time be easily removed without danger, and each case has been noted in a book kept in the Museum, where every process of lining, cleaning or repairing is carefully recorded.

Science Division.

49. Major-General Festing, the Director for this Division forwards the usual annual reports by the Museum Keepers.

Machinery and inventions Division.

50. *Machinery and Inventions Division.*—Mr. W. I. Last, the Keeper, reports that during the year 1893 this Collection has been increased by 37 new acquisitions, chiefly on loan, in addition to the Collection of Mining and Metallurgical models that has recently been transferred from the Geological Museum at Jermyn Street to this Division, where it is in close proximity to the Mining Laboratory of the Royal College of Science. Amongst the more interesting of the acquisitions may be specially mentioned :—

Howe's original model of the link motion.
Castings from pattern of Blenkinsop's rail and wheel.
Collection of old rails by Midland Railway Co.
Ramsbottom's water scoop for supplying locomotives.
Körting's ejector condenser.
Double cylinder 25-H.P. engine.
Cowper's original writing telegraph.
Pratt's typewriter, 1866.
Sand moulding machine.
Massey-Harris hay tedder.
Model of French mine tubbing and cage.
Shallenberger's electric meter.
Sporton's water meter.
Two models of pile drivers.

Space was found for this extension by the removal of the collection of Art objects from the eastern extremity of the ground floor of the South Galleries. At the same time the

screens erected for the pictures when the building was used for the National Portrait Gallery have been taken down, thus greatly facilitating the re-arrangement of the Collection, which now extends to the Exhibition Road entrance.

The practice of exhibiting the models in motion has been further extended, and by the introduction of self-closing valves, by which the visitor may turn on the compressed air to the model that he wishes to examine in motion, the existing supply has remained sufficient. In addition to the 28 models detailed in the Report for 1892, the following eight are also now shown in motion daily between 11 a.m. and the hour for closing :—

Fairlie's locomotive.
American locomotive.
Six-coupled goods engine.
Colliery winding engine with spiral drum.
Brotherhood's 3-cylinder engine.
Musgrave's 2-cylinder N. D. C. engine.
Taylor & Davies' disc engine, 1836.
Tower's spherical engine.

A collection designed to show the development of railway rails, from the early plate ways to the heavy rails now in use, is already in an advanced state. For many of the specimens we are indebted to C. E. Stretton, Esq., of Leicester, and to J. Thompson, Esq., of Kirkhouse, who have kindly interested themselves in procuring them.

There has been a considerable increase in the number of visitors over that reported for 1892, the number passing the turnstile exceeding by over 30,000 that of any preceding year.

51. *Ship Models and Marine Engineering Section.*—Mr. W. I. Last, the Keeper, reports that during the year 1893 the objects added are 24 in number, but that a considerable number of models on loan have been withdrawn mostly to be sent to the Chicago Exhibition; many of them have not yet been returned, their owners wishing to show them at the Antwerp Exhibition. Ship Models and Marine Engineering Section.

Amongst the most interesting additions may be mentioned :—

Four sectional models illustrating details of construction of first-class battle-ships of the "Royal Sovereign" class, 1892. Made for the Department by order of the Admiralty.

Whole model of a steam collier specially built by Messrs. Short Bros., Sunderland, for carrying large coal cargoes under the Thames bridges, 1892.

Whole model of a Sand Pump Hopper Dredger, built by Messrs. Lobnitz and Co., Renfrew, 1892.

Whole model of the gunboats "Colombo" and "Cabral," by Messrs. J. and G. Rennie, 1866.

Whole model of the gunboats "Arrow" and "Bonetta," by Messrs. J. and G. Rennie, 1871.

Whole model of an Indian Famine Relief Steamer, by Messrs. J. and G. Rennie, 1874.

Half model of P.S. "Leinster," by Messrs. Samuda Bros., 1860.

Whole model of the yacht "Dryad." Presented by Professor J. W. Groves.

Whole model of a Thames barge, by J. Green, Esq., Brentford.

Model of the horizontal screw engines of H.M.S. "Bacchante," by Messrs. J. and G. Rennie, 1875.

Four drawings showing the machinery arrangement of the S.S. "City of Dundee," 1890, fitted with Howden's system of forced draught.

Drawings of a launch fitted with a reversible screw propeller driven by a Priestman's oil engine.

During the year 30 models have been sent on loan from this collection to various provincial museums and exhibitions by the Circulation Division.

Scientific Instruction and Research Collections.

52. *Collections for Scientific Instruction and Research.*—The changes made in the arrangement of the apparatus during 1893 have been few, and confined chiefly to the sections illustrating Geology and Physiography. Considerable changes in other sections are proposed when additional space is provided in the Cross Gallery to which reference has already been made.

The copies of old weights and measures are now placed in the vestibule at the southern entrance to the galleries, and with them are shown verified copies of the standard yard and metre lately made for the Department. To these will be added illustrations of the various other Imperial Standards of measure.

The number of visitors receiving special assistance in the examination of apparatus in 1893 was 3,804, an increase of 658 on 1892.

Mr. A. C. King, the Museum Keeper in charge, furnishes the following list of the more important additions to the Collections :—

Physics.—Photometric apparatus made by Schmidt and Haensch; a radio-micrometer as designed by Professor Boys; a set of "iris buttons;" an alternating dynamo, and two transformers, designed for laboratory use.

Mr. W. B. Croft has presented a set of apparatus and photographs to illustrate the phenomena of diffraction, and a galvanometer scale has been received on loan from R. W. Paul.

Mathematics, Mechanics, and Measurement.—A calculating machine (the Brunsviga) made by Grimme, Natalis and Company, of Brunswick; a model to illustrate Hele Shaw's sphere and roller mechanism; copies of standard measures referred to above; an old Chinese clock with double verge escapement.

Mr. F. Galton has lent an apparatus designed by him to afford a physical illustration of the law of error or of dispersion.

Metallurgy.—A Berthelot-Mahler bomb calorimeter made by L. Golaz, of Paris.

Geology and Mineralogy.—A series of maps illustrating the official Geological Surveys of various countries including the British Isles and Colonies, the United States, France and its Colonies, Belgium, Switzerland, Germany, Austria, Italy, Spain and Portugal, Norway and Sweden, and Russia.

Models in relief of the Harz Mountains, the Kaiserstuhl in Baden, the environs of Coblentz, and of a glacier and volcano.

Vertical and horizontal forms of microscopes for examining crystals at high temperatures.

A working model of a geyser. This has been constructed in the Department workshops.

Physiography.—Considerable additions have been made by loan to the examples of meteorological instruments in this section with the advice and assistance of Mr. G. J. Symons, F.R.S.

Biology.—Monochromatic light apparatus.

Series of wax models illustrating forms of embryos and development of flowers of certain plants, prepared by Dr. A. Ziegler, Freiburg, Baden.

Camera, microscope, objective, and condensers used for micro-photographic work.

53. *Science and Education Library.*—Mr. A. C. King, the Keeper, reports that 1,553 volumes, chiefly works on Science, have been added to this Library in 1893. Of these, purchases numbered 781; gifts, including those from scientific and other societies, 656; and loans for exhibition, 116. Science and Education Library.

Among the purchases, the most important is Dresser and Sharpe's "Birds of Europe," in 8 volumes 4to. The Library is becoming especially rich in Transactions and Proceedings of scientific societies, journals, and other scientific periodicals, English and Foreign, which are acquired primarily for the use of the Professors and students in the Royal College of Science.

The number of readers has been 18,087, an average of about 58 for each of the 310 days on which the Library was open. A table giving the number of readers during each of the last 10 years appears in the Appendix D., page 246. This shows that the readers are fewer than they were six or seven years ago. The diminution is probably in a great measure due to the almost exclusively scientific character the Library has assumed. There is little in the acquisitions of recent years suited to the general reader, for whom, however, much greater provision is made elsewhere by free libraries than was formerly the case.

Books are also issued for the use of the Professors in the Royal College of Science; 1,703 volumes were lent in 1893, and 1,746 in 1892.

The Patent specifications now kept in this Library are occasionally consulted, but not so much as formerly, when they were in close proximity to the Collection of Machinery, &c.

A new edition of the Catalogue of the Educational Division of the Library, comprising books relating to the history, theory, and practice of education at home and abroad, has lately been issued. This ranges with the Catalogue of the Scientific Division published in 1891. The books have been re-arranged in the cases to correspond with the catalogue. It is hoped that the Catalogue, which has been widely circulated among educational institutions in this country, will make English Teachers better acquainted with the collection.

54. *Heating, Lighting, &c.*—Major-General Festing, F.R.S., reports that the working expenses (including repairs) of the electric lighting in the South Kensington Museum has amounted during the past year to 1,260*l.* The consumption of gas for evening lighting of the Museum is at the rate of 9,000 feet (costing 1*l.* 7*s.* 9*d.*) per hour, the hours of lighting having been 680. The total consumption of gas in the whole premises (including the schools) has been 17,187,900 cubic feet, costing Heating and lighting, &c.

2,650*l*. The expenditure on coke for the heating apparatus of the various buildings at South Kensington was 970*l*. 10*s*.

The mean temperature of the permanent buildings of the Museum while artificially heated was 59·35°, that of the outside air having been 44·94°.

The following table gives an abstract of the records for the whole year of the temperature in certain parts of the Museum and out of doors:—

——	Diurnal Variation.		Temperature.		
	Max.	Mean.	Min.	Mean.	Max.
	°	°	°	°	°
Competition Gallery - -	10	3·69	47	60·83	82
New Sheepshanks Gallery -	9	3·00	53	62·46	85
Raphael Gallery* - - -	11	3·97	53	60·28	79
Western Gallery - - -	12	5·57	50	62·37	80
North Court (Centre) - -	9	3·63	55	62·35	78
South Court (East side) - -	8	3·19	52	61·36	78
South-east Court - - -	11	2·44	51	60·62	78
On Screen, out of doors - -	28	13·42	18	52·14	91

The working expenses of the electric lighting apparatus at the Bethnal Green Museum amounted to 545*l*., the floor space being 53,500 feet. The expenditure on coke for heating this Museum has been 52*l*.

Circulation.

55. *Circulation.*—During the year a collection of objects was sent to the Corporation Art Gallery at York, for a period of 12 months, thus increasing the number of Museums, to which annual loans are made, to 43. Applications were also received from Aberdeen, Dover, Dundee, and Ipswich for the Museums and Art Galleries in these respective towns to be included among institutions assisted by means of loans of objects. These applications have been sanctioned and collections will be sent.

Mr. H. M. Cundall, the Museum Keeper in charge of this section, reports that the Department has assisted 29 temporary exhibitions with loans of objects during the year. Of these the principal were held in the following towns:—

Ashton-under-Lyne.— At the Heginbottom Technical School and Free Public Library at the inauguration of the building which was the gift of the Mayor and his brother-in-law the late Mr. George Heginbottom to the town.

Bournemouth.—At the School of Science and Art, in aid of the general funds of the School.

Plymouth.—At the Science, Art, and Technical Schools, to inaugurate these new premises, the property of the Corporation.

Poole.—At the Science and Art Schools and Museum, under the control of the Corporation, for raising funds for furnishing the Museum.

* Closed from 1st August 1893 for alterations.

Rotherham.—An exhibition held in an old mansion in Clifton Park, purchased by the Corporation for the town with a view to establishing a permanent Museum.

Truro.—The Cornwall County Fisheries Exhibition held with a view to forming a County Museum and School of Fisheries.

A collection of works, executed by students in Schools of Art in the United Kingdom, and illustrating the various subjects of Art instruction under the Department, was lent to the Chicago Exhibition.

The works of students which gained prizes in the National Art Competition were lent for short periods for exhibition at Barrow-in-Furness, Handsworth, and Southport.

A catalogue of books available for loan has been prepared and issued to Schools of Art.

The details of the loans to provincial Museums and to temporary exhibitions are given in Table 1, page 231.

We have thought it desirable to extend to Art Classes carried on under a local authority the privilege, hitherto only accorded to Schools of Art, of borrowing books and objects from the South Kensington Museum.

The number of objects, paintings, books, &c., lent to Schools of Art and Art Classes for the purpose of study, is shown in Table 2, page 233.

27 Science Schools received on loan collections of scientific apparatus, the particulars of which are given in Table 3, page 237.

The total number of objects, &c., on loan to provincial Museums, Exhibitions, Schools of Science and Art, and Classes, for various periods during the year was 28,274.

56. *Grants in aid to Provincial Museums.*—Five Museums received grants in aid from the Department towards the purchase of objects. A return showing the manner in which the grant was allocated is given in Table 5, page 240. Aid to Provincial Museums.

57. *Branch Museum, Bethnal Green.*—Since 1890, the number of visitors has increased annually. In that year it was 402,989, while last year it amounted to 591,074, an excess of 11,141 over the return for 1892. Bethnal Green Branch Museum

The admission fee of 6*d.* on Wednesdays was abolished on the 6th of December last, and entrance to the Museum on all week-days is now free.

Mr. C. H. Derby, the resident officer in charge, reports that during the year 10,393 persons, most of them children from the neighbouring board schools, made notes or sketches, chiefly from the pictures in the National Portrait Gallery.

Application to inspect the Doubleday Collection of Lepidoptera was made by 239 visitors, making a total of 15,798 since it was deposited here in 1876.

In the Food and Animal Products Collections, a number of samples of "Commercial Isinglass," and of "Raw and Refined

Sugars," were presented by Mr. James Vickers and Messrs. Martineau and Sons respectively as substitutes for the older specimens exhibited by them. Other fresh specimens have been added to these collections, and a number of old ones have been removed. 1,686 new labels have been prepared. The old register of the Food Collection having become obsolete, a new one has been prepared.

A collection of Italian Art objects, lent by Mrs. Drake, was withdrawn, and the space vacated has been filled by selections of old English, European, and Oriental tiles, enamels, Hispano-Moresco ware, and Russian and other textiles, from the South Kensington Museum.

The interesting Japanese room, lent for many years by Mr. Frank Dillon, has been purchased from that gentleman.

IV.—Other Museums in connexion with the Department of Science and Art supported by the State.

Museum of Practical Geology.

58. *Museum of Practical Geology, Jermyn Street.*—From the Report of the Director of this Museum, Sir Archibald Geikie, F.R.S., it appears that the Nevill Collection of Minerals, bequeathed some years ago by Mr. H. Ludlam, and numbering nearly 4,000 specimens, has recently been displayed in two new table-cases, fitted with drawers below. A further selection of choice specimens of minerals from the Ludlam Collection has also been exhibited in some new cases placed in the Hall. In consequence of the removal of a large number of models of mining machinery to the Science Collections of the South Kensington Museum, the contents of the model rooms have undergone a partial re-arrangement; and some additional space, thus secured, has been annexed to the Palæontological department, enabling a series of cases to be devoted to the display of a collection of fossil remains of British elephants. In the Petrographical Gallery, where various improvements have been effected, some bold ge logical sections have been introduced, in illustration of the contents of the cases. A handbook to the Ceramic collection in the Museum has recently been published, and other handbooks are in preparation. Lists of donations to the Museum are given at page 280. The Curator of the Museum, Mr. Rudler, reports that the number of visitors during the year was 42,241, viz., 28,585 in the mornings and 13,656 in the evenings. Further details will be found in the Report of the Director at page 252.

Edinburgh Museum.

59. *Edinburgh Museum.*—During 1893 the various collections in the Museum have been enriched by numerous additions of important specimens both by gift and purchase, among which may be noted:—

Original model of the marble group "The Distressed Mother," by Sir R. Westmacott, R.A., presented by the

Right Hon. J. H. A. Macdonald, C.B., Lord Justice Clerk of Scotland.

Fine Babylonian Cylinder Seal with figures of Merodac and others, 7th century, B.C., presented by George S. Mackenzie, Esq., London.

Two models of Young and Beilby's Retort for distilling shale, coal, &c. for the obtainment of ammonia and heating gases, presented by the Patentees;

and the following purchases:—

Sir Thomas Dick Lauder's Collection of Ecclesiastical Vestments, Altar Frontals, Chalice Veils, and other embroideries, and plaster cast reproductions of Donatello's colossal group "Judith and Holofernes"; of part of Transept Doorway, Bordeaux Cathedral, 14th century; of part of Rood-Loft, Limoges Cathedral, 16th century; of part of Transept Door, Beauvais Cathedral, 16th century; and of the High Cross, Tuam, 11th century.

The refreshment room, which was very little used by the public, was abolished, and the space which it occupied made available for general Museum purposes.

Arrangements have been made in the Library for the regular reception of the Specifications of United States Patents as well as those of the United Kingdom.

In the gallery of Scottish Geology and Mineralogy, the collections of rocks and fossils have been considerably augmented, and their nomenclature, as far as possible, revised up to date.

In the Natural History Section, the entire exhibited collection of Birds has been relabelled, the nomenclature being brought up to date. The collections of British and European Lepidoptera have been entirely revised and re-arranged, and a commencement has been made with the re-arrangement of the Mammalia. Many important additions have been made to the collections both by donation and by purchase.

The number of visitors to the Museum during 1893 was 349,689 as compared with 388,532 in the previous year. The Report of the Director, Major-General Sir R. M. Smith, K.C.M.G., will be found at p. 282.

60. *Dublin Museum of Science and Art.*—The Report of the Director, Dr. V. Ball, C.B., F.R.S., will be found at page 298, and that of the Board of Visitors at page 318. Dublin Museum.

The attendance in the Museum exceeded that of 1892 by about 24,000, the numbers having been in 1892, 343,714, and in 1893, 367.645. The average Sunday attendance fell from 1106·6 in 1892, to 979 in 1893. This was probably due to the exceptionally fine season, as the Sunday attendances at the Botanic Gardens were much increased during the same period. The electric lighting has been maintained throughout the year

in a state of efficiency, and it is hoped that the installation may be extended to other parts of the premises during the year.

Art and Industrial Department.

61. *Art and Industrial Department.*—Considerable progress has been made in the arrangement and display of the specimens in this Department. The additions by purchase, donation, and loan, have been numerous and valuable. As far as possible the principle of classifying, which was originally adopted, has been adhered to. By the death of the Duke of Leinster, who was for many years Chairman of the Board of Visitors, the Museum has lost a warm friend and constant contributor to the collections.

Royal Irish Academy Collections.

62. *Royal Irish Academy Collections.*—This section of the Museum has been very much improved in appearance by the preparation of special mounts for the specimens. A number of valuable additions were made during the year.

Natural History Department.

63. *Natural History Department.*—Much attention has been paid since the arrangement of the systematic collections, to the cases in which the specimens to illustrate the Geographical Distribution of Animals and various phenomena connected with the descent and evolution of species are exhibited. These now constitute a most attractive feature in the Museum. Interesting additions have also been made to the Palæontological collections which now occupy a large section of the Museum. The new offices for this section of the Museum have recently been completed.

Palæontological Collections.

Herbarium and Botanical Collections.

Several valuable additions have been made to the Herbarium and Botanical Collections, which are much resorted to both by the general public and by students seeking for information and desirous of comparing specimens.

Geological and Mineralogical Collections.

64. *Geological and Mineralogical Collections.*—The former of these is in the charge of the officers of the Geological Survey. Both are now well labelled and arranged for reference. Some enlarged photographs illustrative of the influence of Geological Structure on Scenery have recently been added to those which previously existed in this section.

Royal Botanic Gardens, Glasnevin.

65. *Royal Botanic Gardens, Glasnevin.*—Save for the want of special houses for succulent plants and tropical ferns the gardens may be said to be now well equipped with the necessary appliances. They have been maintained in excellent order during the year.

The number of visitors exceeded that of 1892 by about 33,000. The returns being: 1892, 377,024 and 1893, 409,928; of these 285,487 were Sunday and 124,441 week-day visitors, the former, therefore, being more than double the latter. The highest Sunday attendance was 9,170 on the 18th June and the lowest 27 on the 30th December.

66. *National Library.*—There was a falling off in the attendances during the year, which may be in part attributable to an unusually fine season; the total number of readers having been 113,888, as compared with 133,056 in the previous year. National Library.

67. *Metropolitan School of Art.*—There was a considerable improvement in the results of examination last year, coupled with improved attendance. The total number of students in attendance was 459; 217 belonging to the Day and 242 to the Evening Classes. Metropolitan School of Art.

The prizes were presented to the Students by his Excellency, the Lord-Lieutenant—the public ceremonial for that purpose having been held in January.

V.—Geological Survey of the United Kingdom, &c.

68. *England and Wales.*—From the Report of the Director-General of the Geological Survey it appears that the area surveyed amounted to 935 square miles, with 3,896 miles of boundary-line. The Staff is mainly engaged in the centre and south of England upon a survey of the Drift deposits, but making also such revisions in the Solid Geology as may be found to be necessary. The re-survey of the South Wales coal-field has made satisfactory progress, and the North Staffordshire coal-field is about to be begun. The mapping of the Isle of Man is far advanced. The third volume of the general Memoir on the Jurassic Rocks of Britain has been published—"The Lias of England and "Wales, Yorkshire excepted," by Mr. H. B. Woodward; also an Explanatory Memoir on Sheet 65 (South-west Norfolk and North Cambridgeshire), edited, and in great part written, by Mr. Whitaker. The fourth volume of the Jurassic Memoir is in type, and will be issued early in this year. Nine new maps on the One-inch scale have been published; Drift and Solid editions of four sheets in the North of England, and of five New-series maps in the South of England. The Isle of Wight sheet of the New-series has been published with the mainland added; Drift editions with revisions of the Solid Geology of three other maps have also been issued. One map on the six-inch scale (Sheet 15, Durham) has been published. MS. coloured copies of 49 Six-inch Maps have been deposited in the office for public reference. Geological Survey, England and Wales.

69. *Scotland.*—The total area surveyed during the year amounts to 619 square miles, with 3,720 linear miles of boundary lines. The field-work has been devoted almost entirely to the area of the Highlands, where one group of surveyors is engaged in the northern and western parts of Sutherland, Ross-shire, and Inverness-shire, a second group along the northern flanks of the Grampian Mountains; and a third along the Scotch Survey.

southern tracts of the Highlands from Kincardineshire to Cantyre and Islay. The preparation of thin sections of rocks for microscopic examination is conducted at the Edinburgh Office for the three branches of the Survey, and during the past year 833 slides have there been prepared and distributed. Another sheet of the Map of the North-west Highlands, No. 91, has been published, and six additional sheets are in the hands of the engraver. The Fifeshire coal-field, which was surveyed many years ago and of which the maps are becoming out-of-date, is undergoing revision, and new editions of the Six-inch Maps of that area and of Sheet 40 of the One-inch Map are now in preparation.

Irish Survey.

70. *Ireland.*—The sheets of the One-inch Map of Ireland and the explanatory Memoirs accompanying them having now been published, the reduced staff of surveyors retained in Ireland is employed in revising the older maps so as to bring them up to date. Important revisions are in progress in the counties of Mayo, Galway, Down, Louth, and Cavan. A large collection of fossils has been made from the Silurian rocks of the north-east of Ireland, which will now be brought into detailed relation with the corresponding rocks in the south of Scotland. The series of specimens of rocks and fossils illustrative of Irish Geology, and placed in the Museum of Science and Art, Dublin, has been still further increased and re-arranged. During the winter much time has been devoted to the preparation of duplicate copies of the original field-maps on the Six-inch scale. These duplicates are deposited in the office for reference by the public.

Further details are given in the Report of the Director General at p. 252.

The Committee on Solar Physics.

Committee on Solar Physics.

71. In response to our invitation Sir G. G. Stokes, Bart., F.R.S., rejoined the Committee, accepting the position of its permanent Chairman.

The Committee report that they continue their work on the following lines:—

Sun observations.

(*a.*) The organisation of observations of the sun at various parts of the earth's surface.

Photographs.

(*b.*) The organisation of a system of daily photographs at various observatories, including Greenwich, on a larger scale than that hitherto attempted.

Early observations of Solar spots.

(*c.*) The collection and discussion of the earliest observations of solar spots since the employment of photography.

Actinometric observations.

(*d.*) The introduction of actinometric observations at great heights, and the discussion of the best means both of making and recording such observations.

Spectroscopic observations.

(*e.*) The spectroscopic observations of solar spots with reference to the chief lines widened in each.

Laboratory experiments.

(*f.*) Laboratory experiments in connexion with the observations made on the sun since the introduction of the new method.

(*g.*) Observations and photographs of the spectra of different compounds of carbon, with the view of determining the true nature of the carbon which is known to exist in the sun's atmosphere. Carbon spectra.

(*h.*) Observations of spectra which are visible at low temperatures, and comparisons of the same with the spectra of certain celestial bodies. Low temperature spectra.

(*i.*) Experiments on the spectra of meteorites under various conditions, with the view of investigating the possible meteoritic origin of the sun, as well as of all other celestial bodies. Spectra of meteorites.

(*k.*) Observations and photographs of the spectra of the various orders of celestial bodies, with the view of determining the true place of the sun amongst them. The sun's place amongst the stars.

(*l.*) The organisation of eclipse observations, and the discussion of the records obtained by them. Eclipse observations.

(*m.*) The construction of a new map of the spectra of metals, Rowland's photographic map of the solar spectrum forming the basis. Spectra of metals.

(*n.*) Discussion of sun-spot spectra in relation to the latitude of the spots. Sun-spot spectra.

A report to the Solar Physics Committee by Professor J. Norman Lockyer, C.B., F.R.S., appears on page 327.

72. *Royal Hibernian Academy of Arts.*—The annual exhibition of works was held from March to June. 156 season tickets were issued, as against 270 in the previous year. The day admissions at 1*s.* were 2,544, as against 3,378, and the evening admissions at 1*d.* were 9,803 as compared with 13,355 in the year 1892. During the eight Sunday afternoons that the Exhibition was open there were 1,346 admissions at 2*d.*, against 1,853 for the seven Sundays it was open in 1892. Further details are given in Appendix K., page 325. Royal Hibernian Academy.

VI.—Technical Education.

73. In order to obtain a return which might be continued from year to year, of the application of funds by local authorities to the purposes of Science, Art, Technical and Manual Instruction, we issued a circular letter in February 1894, to the councils of counties and county boroughs in England and Wales, and to the county councils, town councils of burghs, and commissioners of police burghs in Scotland, asking for information as to the amount *expended* on technical education during the year 1892–93, and the amount *allocated* to technical education for the year 1893–4, out of moneys derived from the residue received under the Local Taxation (Customs and Excise) Act, 1890, and (in the case of England and Wales) from rates raised under the Technical Instruction Act, 1889.

The return is in preparation, and as soon as it is complete it will be presented to Parliament.

74. In only a few cases, so far as we are informed, have school boards in Scotland availed themselves of the provisions of the Technical Schools (Scotland) Act, 1887 :—

The Arbroath School Board devote about 20*l.* a year out of the rates to the Science and Art Classes held at the High

School, Arbroath (in connexion with the Department), which they have taken under their charge. The board are erecting a High School, in which provision is to be made for Science and Art instruction.

The Old Monkland School Board have erected and equipped a technical school at Coatbridge at a cost of 7,740*l.* The income for the year 1892–93 is stated to have been 965*l.* 5*s.* 2*d.*, and the expenditure 1,245*l.* 1*s.* 6*d.*, while the estimated income for the year 1893–94 is returned as 1,201*l.* 0*s.* 9*d.*, and the expenditure is estimated at 1,544*l.* 11*s.* 6*d.* The interest on loans and repayments thereof are not included in the expenditure.

The Elgin (Burgh) School Board have established a technical school at the Elgin Academy (Science School and Art Class No. 7,765, in connexion with the Department). The amount contributed by the Board towards the maintenance of the school for the year 1892–93 was 50*l.*

The Galashiels Burgh School Board have established a Technical School. The following particulars have been obtained as to the income and expenditure of the School, the deficiency in each session having been met by the Board:—

Session.	Income.	Expenditure.	Deficiency.
	£ s. d.	£ s. d.	£ s. d.
1889–90 - -	158 0 11	236 0 11	78 0 0
1890–91 - -	128 10 1	174 9 7	45 19 6
1891–92 - -	161 4 3	206 7 8	45 3 5
1892–93 - -	122 12 0	206 10 0	83 18 0
1893–94 - -	—	—	30 0 0*

75. The following information has been obtained with regard to the action taken by local authorities in Ireland, in supplying or aiding the supply of technical instruction, under the provisions of the Technical Instruction Acts:—

(1.) The Municipal Council of the City of Dublin have levied a rate of 1*d.* in the £ for the year 1894, producing a sum of 2,600*l.* as in the previous year.

(2.) The Belfast City Council have again voted 800*l.* out of the rates, and distributed the amount amongst four schools in the City.

(3.) The Corporation of Cork continue to levy annually a rate of ½*d.* in the £, producing about 300*l.* a year, which sum is handed over to the General Committee in charge of the Municipal Schools of Science, Art, and Music, together with the proceeds of another ½*d.* rate levied under the Public Libraries' Acts (Ireland), 1855 and 1877.

* Estimated deficiency.

(4.) The Board of Guardians of Galway Union have voted a further sum of 275*l.* for the purposes of technical instruction in the Union (being a penny in the £ on the valuation of the entire Union, including the Urban Sanitary District of the Galway Town Commissioners, whose contribution amounted to 110*l.*)

(5.) The Board of Guardians of Gort Union (Co. Galway) last year voted a sum of 179*l.* 4*s.* 6*d.* out of the local rate (being 1*d.* in the £ on the rateable valuation of the Union), for the purposes of technical instruction in the Gort Convent School. This amount has recently been paid over.

(6.) The Corporation of Londonderry have continued their annual grant of 50*l.* to the Londonderry School of Art.

(7.) The Pembroke Township Commissioners last year levied, for the first time, a rate of 1*d.* in the £, producing 417*l.*, which was applied to the purposes of the Pembroke Technical School, Ringsend. The Commissioners have included in the estimates for the present year a similar rate, which will probably amount to 420*l.*

76. Several schools in Ireland (at Belfast, Dublin, &c.) have applied for grants from the Department in aid of technical instruction, for the year 1893–94, under the regulations issued in 1892. These provide for a grant to the school aided by the local authority, equal to the sum contributed out of the rates for instruction in subjects other than those for which the Department gives aid under the Science and Art Directory. No grants were made in 1893 under these regulations, as the schools did not make the necessary arrangements for the provision of technical instruction in the school-year 1892-93.

77. Since the date of our last report 49 Minutes (mostly supplementary) have been issued under Section 8 of the Technical Instruction Act, 1889, sanctioning special subjects of instruction on the representation of local authorities that they were required by the circumstances of the respective districts. A list of the 43 local authorities which applied for these Minutes will be found at pages 3 and 4 of the Appendix. The total number of Minutes issued under the Act, is now 275.

A list of the subjects which have been sanctioned since the passing of the Act is given at page 1 of the Appendix.

78. During the past year decisions have been given upon several appeals under Sub-section 1 (1) (*f*) of the Technical Instruction Act, 1889, by schools and institutions, consequent upon the refusal of the local authorities to give them grants.. In most cases it appeared that the local authorities were within their powers in declining aid, as they were themselves supplying technical instruction by applying their funds to the purposes of schools under their direct control. In two or three cases it was found that the schools from which appeals were received had

good claim to a share of the fund; and the award of the Department was acted upon by the local authorities.

79. In our last report we included a number of decisions and opinions which had been given upon various questions arising under the Technical Instruction Acts, and which appeared to us to have some general interest. The following may, perhaps, also be recorded as indicating the views of the Department upon other questions with regard to the interpretation of the Acts—the decisions and opinions having been arrived at, in some cases, after consultation with the Local Government Board:—

(1.) That a contribution made by an English or Welsh County Council under section 1 of the Local Taxation (Customs and Excise) Act, 1890, is subject to the provisions of the Technical Instruction Act, 1889, so far as they may be applicable thereto. The cases of England and Scotland differ in this that the Technical Schools (Scotland) Act 1887, relates wholly to machinery, while the Technical, Instruction Act, 1889, contains in section 1, sub-section 1, clauses (*a*), (*b*), and (*c*), certain fundamental conditions required to be fulfilled by any schools receiving grants from rates levied under that Act. The effect of the Statute was to set up a system of Technical Education governed and controlled by those conditions. In 1890 power was given to the county councils to contribute certain moneys received by them from public taxation "for the purposes of technical "education within the meaning of the Technical Instruc-"tion Act, 1889," and make that contribution "over and "above any sum that might be raised by rate under that "Act." It would appear, therefore, that they were empowered by this Statute to contribute to an existing system of Technical Education which had recently been established by Parliament under definite conditions and limitations, and such conditions and limitations govern the application of the funds so contributed. In the case of Scotland the only question was one of machinery, and in view of the fact that at the passing of the Local Taxation (Customs and Excise) Act, 1890, the machinery prescribed by the Technical Schools (Scotland) Act, 1887, only existed in two districts of Scotland, it could not reasonably be contended that the County Council or Commissioners were limited to the machinery which the previous Act had been intended to create, but had not in fact created.

(2.) That the provisions of section 1, sub-section (1), clause (*d*), do apply to moneys contributed under the Act of 1890, and the application of such moneys is therefore subject to the appeal to the Department of Science and Art provided for by clause (*f*). The words of section 1, sub-section (3) of the Local Taxation (Customs and Excise) Act, 1890, are clear, that the moneys contributed by the County Council

under the Act are to be applied by the Town Council or authority under the Technical Instruction Act, 1889.

(3) That it is the duty of the Department of Science and Art to decide as to the qualification of a school to participate in the provision made for technical instruction and as to the amount to be allotted to it, and upon the determination of the amount proceedings by action for mandamus or action founded on the Statutes would lie against the local authority to compel the payment of such amount. No proceedings can be taken until the amount is ascertained. That the authorities of the school should therefore appeal to the Department to determine whether it is entitled to any—and what—grant, and, should a decision be given determining the amount, proceedings should be taken at the instance of the school. The actual form of the proceedings would have to be considered when the decision of the Science and Art Department upon the appeal to them has been obtained.

(4.) That the Code of Regulations introduced by the Minute of the Education Department of the 18th May 1893 (Evening Continuation School Code), notwithstanding that it contains no mention of obligatory or standard subjects, does not render nugatory the provision made by section 1 (1) (*a*) of the Technical Instruction Act, 1889, in its application to Evening Continuation Schools, but that the provision remains operative as to all scholars who receive instruction in the subjects forming the obligatory or standard subjects prescribed by the Education Department with reference to Public Elementary Schools receiving a Parliamentary Grant, whether the instruction received is received in a Day School where the subjects are obligatory, or in an Evening School where they are not.

(5.) That the rating powers of one Local Authority do not affect the powers of another authority if their districts overlap. Thus it might happen that if a Borough or Urban Sanitary District, which was rated under the Technical Instruction Act, fell within the administrative district of a County Council, which also raised a rate for technical instruction, the total rate raised in such Borough or Urban Sanitary District, for the purposes of the Act, might exceed one penny in the pound.

(6.) That a Local Authority *may* of its own motion supply technical or manual instruction in institutions set up by itself for the purpose, or in those existing institutions where no technical or manual instruction is given independently of that provided by the Local Authority.

(7.) But that it cannot, under Sub-section (*d*) of Section 1 (1) of the Act of 1889, *aid* the supply in existing schools or institutions, unless moved thereto by a School Board, or by Managers of a School or Institution in actual receipt of aid from the Department of Science and Art. That,

notwithstanding a difficulty created by the opening language of Sub-section (*e*), the Local Authority should, when once set in motion by a proper request, give the aid, according to Sub-section (*d*) as modified by Section 1 (2) of the Act of 1891, to all such Schools or Institutions as are qualified to receive it—whether in receipt of aid from the Department of Science and Art or not.

(8.) That the conditions under which a local authority may itself supply technical or manual instruction within the meaning of Section 1 (1) of the Act of 1889, are those set forth in the rest of the Section, with the exception of Sub-section (*d*), which does not apply; and that the local authority may itself supply technical or manual instruction without thereby incurring any obligation to aid the supply in existing schools or institutions.

(9.) That a local authority is not precluded by the terms of Sub-section 1 (1) (*g*) of the Act of 1889 from expending out of rates in any one year for purposes of the Act, a greater sum than that which could be raised by a rate of one penny in the pound, although the amount actually raised in any one year may not exceed that limit.

(10.) In accordance with the opinions previously given respecting the conditions on which a Local Authority could apply funds to experiments in Agriculture, a County Council was informed that, as the Technical Instruction Act only authorises the Local Authority to supply or aid the supply of technical or manual instruction, it would not be a legitimate expenditure under the Act to establish a Central Agricultural Laboratory for the county, except so far as that laboratory could be shown to be for the purposes of instruction of students in agriculture.

(11.) With reference to schemes for the education of nurses (submitted by several County Councils), it was stated that the training of nurses, as proposed, was distinctly the teaching the practice of a trade or employment, and thus in contravention of Section 8 of the Act; and that the subsequent employment of the nurses as teachers of cottage nursing would not in any way affect the question of the legality of the proceeding.

(12.) With regard to an inquiry from a County Council as to the legality of founding scholarships in accordance with a Circular issued by the National Training School of Cookery, it was pointed out that teaching Cookery in classes to persons generally was within the objects of the Technical Instruction Acts, but that "training young women for service as cooks" (the primary object of the Circular), however desirable it might be in itself, was clearly outside the provisions of those Acts.

(13.) That a County Council could legally pay the examination fees of holders of County Scholarships who might be

required by the Council to attend the Cambridge Local Examinations with the object of testing the progress of the Scholars before renewing their Scholarships for a third year.

(14.) That the proviso to Sub-section 1 (1) (*f*) of the Technical Instruction Act, 1889, must be held to apply to Scholarships established under Sub-section 1 (1) (*b*) of the Act of 1891, and that such Scholarships could not be held at a school conducted for private profit.

(15.) With reference to the opinion recorded in our last report "that the power to provide or assist in providing scholar-" ships given by Sub-section 1 (1) (*b*) of the Act of 1891 " entitles a Local Authority to apply its funds in payment of " travelling expenses of students attending classes for tech-" nical instruction, without its being necessary to employ " any special machinery for the creation of scholarships"—a Local Authority was informed that it might apply funds also to the payment of travelling expenses incurred by students in competing for County Council Scholarships, if the competitions were limited to students attending technical instruction classes.

(16.) A question having been raised as to whether the Technical Instruction Committee of a County Council had power to defray the expenses incurred by their Organising Secretary in attending meetings of the Association of Directors and Organising Secretaries of County Councils, the Committee were informed that it did not appear that there was any legal authority for charging such expenses on the funds set aside by the County Council for the purposes of technical instruction.

(17.) That although the Local Taxation (Customs and Excise) Act, 1890, contains no provision enabling a County Council to make a contribution to a Rural Sanitary Authority, the County Council are not therefore precluded from supplying or aiding the supply of technical education in rural districts. This may be effected either by aiding existing schools in those districts or by providing for the technical instruction of the district through a committee for that district, such committee being responsible to the County Council and accounting to it in the same way as any other committee of a school receiving aid from the County Council.

(18.) As regards the establishment of a school under the management of a Committee consisting of representatives of a County Council and of the Council of a County Borough, it was pointed out that the Technical Instruction Acts do not make any provision for the joint action of Local Authorities. It would appear that the only way in which the difficulty could be met would be to place the school nominally under the management of one or other of the Local Authorities, or of a committee appointed by one of

them, and for the other Local Authority to make a grant to the school (under the powers conferred by sub-section 1 (1) (*a*) of the Act of 1891), and appoint representatives on the governing body in accordance with sub-section 1 (1) (*e*) of the Act of 1889.

(19.) As regards the representation of the Local Authority on the governing body of a school to which it makes a grant—that in the opinion of the Charity Commissioners their authority is apparently not needed for such representation for the purposes only of the Technical Instruction Act; but that if the appointment of governors for all the purposes of the school is required, the Commissioners are prepared to take the necessary steps for the appointment of a reasonable addition to the number of governors constituted by the scheme or other instrument under which the endowment may be administered.

VII.—Developments, bearing on Science Instruction, proposed or in operation.

80. In our last report we expressed our opinion that grave defects in our system of secondary education existed throughout the country, and that the need of a more organized system was beginning to be felt. That we might have a clear view of the aid which the central Education Departments might be able to afford to meet this need and to co-ordinate their efforts in this direction, we called together an Inter-departmental Committee in which the Charity Commission and the Education and Science and Art Departments were represented. The interchange of ideas, and explanations of the lines of action of these three departments, has proved of great advantage, and has enabled us to bring together a very valuable collection of facts more especially relating to the functions which can be and are exercised by each of these three bodies who have public education in their charge. A memorandum drawn up by this Committee from the evidence they had before them, including everything that appeared germane to the subject of their enquiry has been transmitted to the Royal Commission on Secondary Education, and we hope that it will be found by them of use in arriving at their conclusions and making their recommendations.

At present in England and Scotland the only State-aided schools apart from the University Colleges which are devoted to the higher education—in which a near approach to Secondary Education on the scientific side is given, are the Organised Science Schools, aided by the Department. In these not only Science and Art but also literary and commercial subjects are taught in varying amounts, the proportion between the two not being under official control, though a minimum time for Science instruction is insisted upon. The importance of these schools

has been brought prominently before us by the large increase in their number—such increase being very largely due to those started in the provinces. Ten years ago there was only one of these schools. Six years later there were 40, and during the last four years their number has increased to 93. If the energies of this class of school can be directed not merely to grant earning on science instruction but to really effective educational methods they may in some measure fill that gap in the education system in England which exists and to which we have already referred.

So long as the present system of payments on results is adhered to in its entirety there is a danger of the neglect of those subjects which are not included in the Department's Directory, and of their being made subordinate to instead of co-ordinate with them. With the knowledge before us obtained by the experience of some years' work of what some of these schools can do, and of what public opinion demands all should do, we are endeavouring to frame regulations for their conduct which while making the science course more effective will insist that an adequate part of the school hours shall be devoted to a study of those subjects without which the education in the proper sense of the word given at these institutions must be incomplete.

With a view to improving the supervision of Science Instruction given under the Science and Art Department, and also so far as possible with a view to further co-operation with Local Authorities, we obtained at the close of the year with which this report deals the necessary sanction of the Treasury to the appointment of 13 new inspectors, making 17 in all. This change involves the withdrawal of a certain number of temporary inspectors. This addition to the permanent staff of the Department has enabled us to divide Great Britain and Ireland into districts, in each of which an Inspector is located. He is primarily responsible for the inspection of the schools under the Science and Art Department, and also for the supervision of the temporary local Art Inspectors who are employed in the examination of Art and Manual Instruction in the Elementary schools in his district. There can be no doubt of the great advantage that must accrue to the Department by having responsible officers to represent it in the different parts of the country. They will be able to keep it better informed of the needs of the different localities, and it is hoped that they will be looked upon as advisers in all matters connected with Science and Art instruction within their districts. This function of an Inspector was difficult adequately to perform when the Inspectorate was so limited in number. It is also to be hoped, and indeed we have already indications that such will be the case, that the Inspectors may be further able to aid the different local authorities, who administer the funds which are distributed in grants for technical education, by undertaking the inspection of some of their classes. It is our desire that they should co-operate with the officers of these bodies in order that all science instruction whether technical

or otherwise, may be most efficiently and economically carried out.

In some subjects of science aided by the Department we are of opinion that the instruction given is not sufficiently practical. Although the Department has endeavoured with the staff which has been up till now at its command to insist as far as possible on practical work, yet to test its efficiency has been beyond its power except by examination in the Honours Stage of some few subjects. The additional staff of Inspectors has, however, made it practicable to supervise and inspect the practical instruction which may be given at the various schools, and we hope to arrive at some plan by which laboratory work in physical and biological science may be encouraged and eventually made to form a necessary part of the instruction in these branches of natural knowledge.

VIII.—Expenditure of Department.

Expenditure of Department.

81. The expenditure of the Department during the financial year 1893–94 amounted to 666,308*l.*, which was apportioned as follows: expenses of administration, including central staff, office expenses, &c. 39,206*l.*; direct payments, prizes, &c. to encourage instruction in Science, 144,285*l.*; direct payments, prizes, &c. to encourage instruction in Art, 62,173*l.*; services common to both Science and Art instruction, 68,238*l.*, Institutions supported or aided by the State through the Department of Science and Art, 58,875*l.*; the South Kensington and Bethnal Green Museums, including the expenses of circulation of Science and Art objects to country institutions, 86,790*l.*; Payments for Instruction in Public Elementary Schools and Training Colleges in Drawing, 206,242*l.*; and Grants in Aid of Local Museums, 499*l.*; these grants being irrespective of objects lent from the Central Museum.

All which is humbly submitted to Your Majesty.

Signed this 13th day of July 1894.

(L.S.)

ROSEBERY.
ARTHUR H. D. ACLAND.

J. F. D. DONNELLY,
Secretary.

APPENDICES.

APPENDIX A.

Appendix A.
MINUTES, CORRESPONDENCE, AND REPORTS.

MINUTES, CORRESPONDENCE, AND REPORTS.

A LIST OF THE SUBJECTS WHICH HAVE BEEN SANCTIONED SINCE THE PASSING OF THE TECHNICAL INSTRUCTION ACT, 1889.

Agricultural engineering (including driving and working steam engines and machinery).
Agriculture (practice of) and agricultural processes (including demonstrations and experiments for agricultural instruction; practical farm work; vegetable and fruit growing; fruit storing; market gardening; glass houses; management of live stock; dairy work and cheese making; thatching; fence and mow-making; sheep-shearing; hedging; ditching; rick-making; shepherding; under-draining; stacking; ploughing).
Alkali manufacture.
Ambulance work.
Art needlework.
Baking and confectionery.
Banking (principles of) and financial science.
Bee-keeping.
Bent iron work.
Bleaching, dyeing and printing.
Boat-building.
Book-binding.
Book-keeping and commercial terms; office work.
Boot and shoe manufacture and repairing (including pattern cutting and clicking).
Bread making.
Brewing.
Bricklaying.
Brick-making.
Cabinet and furniture making and design.
Carving in wood, stone, and other materials.
Carpentry and joinery.
Carriage building (road and rail).
Casting and moulding in plaster, gelatine, &c.
Cider and perry making.
Coal tar products.
Commerce, principles of.
Commercial law, history, geography, arithmetic, and correspondence.
Cookery.
Designing for porcelain, pottery, and glass.
Designing for textile fabrics, silks, and calico.
Designing for printing and lace.
Designing for metal work and vases.
Designing for book-binding.
Domestic economy.
Economic science.
Elastic web manufacture.
Electrical engineering—electric lighting and transmission of power; electrical instrument making.
Electro-metallurgy.
Enamelling.
Engraving.
Entomology.
Etching.
Farriery
Forestry.
Framework-knitting and hosiery.
Fretwork and turning.
Fuel.
Gardening.
Gas manufacture.
General Tool making.
Gilding.

TECHNICAL INSTRUCTION SUBJECTS SANCTIONED—*cont.*

Glass manufacture.
Goldsmiths' work, and manufacture of personal ornaments.
Hand-spinning and weaving.
Hat manufacture.
Horticulture and arboriculture.
Hosiery manufacture.
House decoration.
Household sewing, dressmaking, and cutting-out.
Illuminating and heraldic painting.
Insurance.
Iron and steel, the manufacture and working of.
Iron-founding.
Kindergarten, theory and practice of.
Lace-making and manufacture.
Laundry work.
Leather preparation and leather industries.
Manual and theoretical instruction in wood- stone- brick- metal- leather- glass- clay- basket- wicker- and fancy straw-work.
Marquetry work.
Mat and rug making.
Milling (flour manufacture).
Mechanical and architectural drawing.
Mechanical engineering.
Metal colouring and bronzing.
Metal-plate work.
Mine surveying.
Mining (including quarrying; raising, preparation, and dressing of ores) and prospecting.
Modelling in various materials.
Modern languages—French, German, Spanish, Italian, Portuguese, Norwegian, Swedish, Danish, Russian, Irish.
Music—Singing and musical notation; instrumental and orchestral music.
Needlework, embroidery and crochet.
Netting.
Nursing.
Oils and fats, including candle manufacture.
Oils, colours, and varnishes, manufacture of.
Oyster culture.
Paper manufacture.
Pattern making.
Pharmacy.
Photography.
Pisciculture, fishing, and subjects connected therewith (including the manufacture and preservation of nets, tackle, and apparatus for catching fish).
Plasterers' work.
Plumbing.
Political economy.
Pottery and porcelain manufacture.
Poultry keeping.
Précis writing.
Principles of education as applied to the teaching of technical subjects.
Printing (including typography, lithography, &c.).
Repoussé work.
Road-making (principles of).
Rope-making.
Sail-making.
Sanitary science and sanitary engineering.
Seamanship.
Ship carpentry and joinery.
Silversmiths' work (including plate and plated wares).
Shorthand.
Sloyd.
Soap manufacture.
Spirit manufacture and rectification.
Sugar manufacture.
Surveying, levelling, and taking out quantities.
Tailors' work and cutting-out.
Teaching, science and art of.
Telegraphy and telephony.
Textile fabrics (spinning, weaving, and silk throwing).
Tools, use of.
Turnery.
Type-writing.
Veterinary science.
Watch and clock making.
Wool, the preparation and treatment of.

LIST OF LOCAL AUTHORITIES for which MINUTES have been issued during the year 1893–94, sanctioning special subjects of Technical Instruction under Section 8 of the Technical Instruction Act, 1889.

ENGLAND.

Bedfordshire.
Bedford County Council (two Minutes—2nd and 3rd).

Berkshire.
Berks County Council (2nd Minute).

Buckinghamshire.
Buckingham County Council (3rd Minute).

Cheshire.
Chester County Council (4th Minute).

Cornwall.
Cornwall County Council (4th Minute).

Cumberland.
Cumberland County Council (6th Minute).

Devonshire.
Exeter, Council of the City of.
Plymouth, Council of the County Borough of (3rd Minute).

Durham.
Durham County Council (3rd Minute).
South Shields, Council of the County Borough of (2nd Minute).

Essex.
Essex County Council (2nd Minute).

Hampshire.
Southampton County Council (4th Minute).
Isle of Wight County Council (two Minutes—1st and 2nd).

Kent.
Dover, Town Council of the Borough of (2nd Minute).
Wrotham, Local Board of.

Lancashire.
Barrow-in-Furness, Council of the County Borough of.
Oldham, Council of the County Borough of.

Leicestershire.
Leicester County Council (5th Minute).

Lincolnshire.
Grimsby, Council of the County Borough of.

London County Council.

Middlesex County Council (2nd Minute).

Monmouthshire.
Monmouth County Council (2nd Minute).

Northamptonshire.
Soke-of-Peterborough County Council (3rd Minute).

Appendix A.

MINUTES, CORRESPONDENCE, AND REPORTS.

LOCAL AUTHORITIES FOR WHICH TECHNICAL INSTRUCTION MINUTES HAVE BEEN ISSUED.—*cont.*

Oxfordshire.
Oxford County Council (4th Minute).

Rutland.
Rutland County Council (2nd Minute).

Somersetshire.
Bath, Council of the City of (2nd Minute).

Staffordshire.
Stafford County Council (3rd Minute).
Tipton, Local Board of.
Walsall, Council of the County Borough of.

Surrey.
Surrey County Council (5th Minute).

Sussex.
East Sussex County Council (4th Minute).
West Sussex County Council (2nd Minute).

Warwickshire.
Birmingham, Council of the City of (3rd Minute).

Westmorland.
Westmorland County Council (3rd Minute).

Wiltshire.
Wilts County Council (two Minute—4th and 5th).

Worcestershire.
Worcester County Council (two Minutes—3rd and 4th).

Yorkshire.
East Riding County Council (2nd Minute).
North Riding County Council (two Minutes—4th and 5th.)

WALES.

Denbighshire.
Llangollen, Local Board of (two Minutes—1st and 2nd).

Merionethshire.
Merioneth County Council.

IRELAND.

Dublin County.
Dublin, Municipal Council of the City of (2nd Minute).
Pembroke Township Commissioners.

Galway County.
Gort Board of Guardians.

LIST OF SCHOOLS TRANSFERRED TO LOCAL AUTHORITIES since the passing of the Schools for Science and Art Act, 1891.

Altrincham Literary Institution.
Barnstaple, School of Science and Art.
Bath, School of Science and Art.
Birkenhead, School of Science and Art.
Bolton, Mechanics' Institute.
Brighton, School of Science and Art.
Derby, School of Science and Art.
Dover, School of Science and Art.
Great Yarmouth, School of Science and Art.
Hyde, Mechanics' Institute.
Newbury, Literary and Scientific Institution.
Rochdale, Technical School.
Rotherham, School of Science and Art.
Ryde (I. of W.), School of Science and Art.
Salisbury, School of Science and Art.
Stockport, Technical School.
Warrington, School of Art.

BY THE RIGHT HONOURABLE THE LORDS OF THE COMMITTEE OF HER MAJESTY'S MOST HONOURABLE PRIVY COUNCIL ON EDUCATION, AT SOUTH KENSINGTON.

(14*th November* 1893.)

My Lords consider the Examinations held by the Department of Science and Art in Honours of—

Machine Construction and Drawing.
Building Construction.
Naval Architecture.

They decide that that part of the examination hitherto worked by the candidates at home shall be abolished, and that in its place a practical examination extending over one or two days shall be held at South Kensington as early as possible in the month of June each year.

Candidates summoned to London to attend these examinations will receive a maintenance allowance of 7*s.* 6*d.* a night while required to be absent from home and third class railway fare; but no cab or omnibus fares will be allowed.

GRANTS FOR DRAWING IN EVENING CONTINUATION SCHOOLS IN ENGLAND, WALES, AND SCOTLAND.

13*th October* 1893.

Annual Grants for Drawing are made by the Science and Art Department to Evening Continuation Schools in England, Wales, and Scotland, under the rules of the current Edition of the Directory (pages 89 and 90) or under the following conditions, and Managers are free to apply under either set of conditions:—

1. The course of instruction in Drawing in Evening Continuation Schools may be in accordance with the appended Syllabus, or with one submitted by the Managers and approved by the Department.

2. Managers desiring to have the Scholars examined in Drawing must apply for an examination (on Form 520 n.) annually, to the Department of Science and Art. Schools beginning work before Christmas should apply before 1st of October, and Schools beginning work after Christmas should apply before 1st of January. They must define exactly on the Form 520 n. the part or parts of the Syllabus which the School may have adopted in which the Scholars are to be examined. The Examination may be held on any evening that may be arranged by the local Inspector with the Correspondent of the School. The examination of the Evening Continuation School in a remote district, should, if possible, be held on the same day as that of the Day School so as to avoid the necessity of a second visit from the Inspector. The Inspector may make arrangements for the collective examination, at some convenient centre, of the Scholars of two or more Evening Continuation Schools which are in the same neighbourhood, especially if the numbers be small.

3. For the examination the Managers must provide common white cartridge paper cut in sheets of about the size of imperial octavo, or about 11 inches by 7½ inches. For Drawing with instruments and from the Cast, the same or somewhat larger paper, but not exceeding 15 inches by 11 inches, either white or tinted, may be used.

4. The Inspector will, on the occasion of his visit, set the work to be then done by each Scholar, in order to test him in the portion of the Syllabus in which he has been instructed, as indicated on the Form 520 n. The work done under these conditions will be sent by the Inspector to the Department with his report.

5. The Managers must furnish the Inspector, when he examines the School in Drawing, with a schedule giving the names in alphabetical order of all Scholars who are presented for examination. There must be a separate schedule for each School when two or more Schools are examined collectively.

6. In deciding whether the instruction in Drawing shall be marked as "Excellent," "Good," or "Fair," the Inspector's general observations upon the instruction, the provision of examples, &c., will be considered by the Department, as well as the work done before him.

7. A grant of 1*s.*, 1*s.* 6*d.*, or 2*s.*, according as the award to the School is "Fair," "Good," or "Excellent," respectively, is made for each Scholar, provided that the managers certify that—

(*a.*) The Scholar has not been examined in Drawing under the rules of the Department of Science and Art within the three months preceding his examination in Drawing at the Evening Continuation School;

(*b.*) The Scholar has received at least 20 hours' instruction in Drawing in the School year* at the Evening Continuation School;

(*c.*) The School has met not less than 30 evenings in the School year*; and,

(*d.*) That each Scholar on whom the Drawing Grant is claimed has received at least 12 hours' instruction in the School year in each of two other subjects recognised by the Education Department. (*See Article* 2 *of the Evening Continuation School Code of* 1893† *and Article* 2 *of the corresponding Code for Scotland.*)

---

* The "School year" is the year ending on the 30th of April.—*Evening Continuation School Code*, 1893. *Article* 9.

† The following are the subjects named in Article 2:—

(*a.*) Elementary Subjects: Reading or Recitation or both combined. Writing and Composition. Reading and Writing combined. Arithmetic.

(*b.*) English Subjects: English. Geography. History. The Life and Duties of the Citizen.

(*c.*) Languages: French. German. Welsh (for Scholars in Schools in Wales. Latin.

(*d.*) Mathematics: Euclid. Algebra. Mensuration.

8. The annual Grant becomes due at the end of the School year, and is paid, upon the receipt by the Department of the claim for it from the Managers, as soon as may be after that date.

9. No Scholar may be presented for examination unless—

(*a.*) Provision for teaching Drawing during at least one hour each week be made in the time table;

(*b*) A separate attendance register for Drawing be kept. In England and Wales this register should be similar to the one kept for each subject as prescribed by Art. 7 of the Evening Continuation School Code. In Scotland the Managers should provide a suitable register.

The register must be marked at the beginning of each lesson. If any scholar registered as attending is withdrawn before the end of the lesson, the entry of attendance should be at once cancelled. The register must show clearly the number of hours' instruction received by each scholar in Drawing. No lesson of less than half-an-hour in length is recognised for purposes of registration.

10. No Scholar may be entered or retained on the register who is under 14 years of age, unless such Scholar is deemed by the Education Department to be exempt from the legal obligation to attend the Elementary Day School.

11. The School must be open at all times to the visits and inspection of the Officers of the Department of Science and Art.

By order,
J. F. D. DONNELLY.

SYLLABUS FOR DRAWING IN EVENING CONTINUATION SCHOOLS.
EXPLANATORY NOTE.

The objects of the course of instruction in Drawing in Evening Continuation Schools should be both to provide Scholars who have not had an opportunity of going through the entire course of Drawing in the Elementary School with the means of perfecting themselves in the Elementary Drawing therein provided for, and to assist such Scholars or others to carry that instruction forward. A sample Syllabus is given below, but Managers are not restricted to it. They may propose a syllabus or scheme of their own. Such alternative syllabus or scheme must be submitted to and approved by the Department of Science and Art before being adopted for use.

DRAWING MATERIALS, &c.

The materials to be used in Drawing may be lead pencil, chalk, and water colours. The use of water colours should not be attempted until some mastery in drawing with the pencil and chalk has been acquired.

Practice in drawing with compasses, scales, rulers, curves and such like instruments should be concurrent with freehand drawing.

The Drawings may be done either from flat examples or from actual objects, and things, and should be done in outline first of all; the representation of effects of light and shade may be practised subsequently.

(*e.*) Science Subjects and Subjects of practical utility.
- Elementary Physiography.
- Elementary Physics and Chemistry.
- Science of Common Things.
- Chemistry.
- Mechanics.
- Sound, Light and Heat.
- Magnetism and Electricity.
- Human Physiology.
- Botany.
- Agriculture.
- Horticulture.
- Navigation.
- Book-keeping.
- Shorthand.

(*f.*) Vocal Music.

(*g.*) Subjects for Girls and Women only.
- Domestic Economy.
- Needlework.

Other subjects if sanctioned by the Education Department may be offered.

COURSE OF INSTRUCTION.

The course is divided into sections for the convenience of Managers, but any parts of the course may be proposed.

Section A.

(1.) *Freehand Drawing in outline from flat examples* of ornamental forms and objects composed of straight and curved lines* ; with a pencil or chalk ; with a brush and tint of colour.

(2.) *Drawing in outline with rulers and compasses*, enlarged or reduced copies of *diagrams* of geometrical figures,† and of objects of simple geometrical construction,† such as simple forms of Building or Machine Construction : and learning how to take measurements of such simple objects.

Section B.

(1.) *Freehand Drawing in outline from simple objects ;* (*a*) having straight lines, such as a salt-box, a ladder ; (*b*) having curved lines, such as a flower-pot, a jug with handle ; (*c*) having straight and curved lines combined, such as a wheelbarrow, an arched doorway, or single flowers and fruits and large leaves.

(2.) *Drawing in outline with rulers, scales, and compasses* (plans, elevations, and sections) *from Measurements* made by the student himself *of actual objects* of simple construction, such as a box, a panelled door, three or four steps in a flight of stairs.

(3.) *Drawing in outline with rulers, scales, and compasses from diagrams* of machines or parts of machines more complicated than those in A. (2) : and *Practice in the representation of varying tones of shadow*, and of different materials in building constructions, by lines, and by tints of colour.

Section C.

(1.) *Freehand Drawing in outline from Casts* of architectural mouldings, and ornamental forms : or from real fruits, flowers, or plants.

(2.) *Drawing in outline with Instruments from Measurements* (plans, elevations, and sections) of mechanical objects, such as a cog-wheel, a tap, a door-lock, and chain.

Section D.

(1.) *Freehand Drawing in light and shade, with pencil and chalk*, from simple objects of domestic use, sprays of foliage, flowers, and fruits, and casts of architectural mouldings, and ornamental forms.

(2.) *Practice in arranging colours*, by tinting freehand outline drawings of ornament, with not more than 4 flat tints of colour.

(3.) *Tinted and shaded drawing with instruments*, in ink, tints of colours, &c. (plans, elevations, and sections), from measurements and specifications of objects of simple construction.

Section E.

Freehand Drawing in light and shade, with brush and water colours, from objects as in D. (1).

---

* These might be similar, if the Managers desire, to those in Standards IV. and V. of the Elementary School Illustrated Syllabus.

† As in Standards IV. and V.

CORRESPONDENCE RELATIVE TO PROPOSED REFORM IN TIME RECKONING.

FOREIGN OFFICE to the DEPARTMENT of SCIENCE AND ART.

SIR, 22nd December 1893.

I am directed by the Secretary of State for Foreign Affairs to transmit to you, to be laid before the Lords of the Council, a Swiss decree ordering the use of Mid-European (Greenwich time) in certain services.

I am, &c.
(Signed) E. GREY.

CIRCULAIRE du conseil fédéral suisse à tous les états confédérés et à toutes les administrations suisses de chemins de fer et de bateaux à vapeur concernant l'application de l'heure de l'Europe centrale (fuseaux horaires).

(Du 11 décembre 1893.)

FIDÈLES ET CHERS CONFÉDÉRÉS,

Nous avons l'honneur de vous informer que, dans notre séance de ce jour, nous avons pris l'arrêté suivant :—

1. A partir du 1er juin 1894, les administrations suisses de transport (postes, télégraphes, chemins de fer et bateaux à vapeur) remplaceront l'heure de Berne par celle de l'Europe centrale, c'est-à-dire par l'heure du 15me degré à l'est de Greenwich.

En conséquence, les administrations susmentionnées sont invitées à avancer les aiguilles de leurs horloges de service de 30 minutes le 31 mai à minuit. Dans les locaux où le service cesse *à 11 heures* du soir au *plus tard*, on pourra ne procéder à cette opération que le 1er juin dans la matinée, mais une heure au moins avant le commencement du service, sauf en ce qui concerne les lignes sur lesquelles circulent des trains de nuit. Pour celles-ci, les modifications à apporter à la marche des horloges devront être effectuées, *en tout cas*, à minuit.

2. Pour dresser, en temps voulu, les horaires définitifs pour l'été 1894, les délais fixés dans le règlement du 13 juillet 1888 sont modifiés comme suit :

Le dernier terme pour nous soumettre les premiers projets d'horaire est avancé du 15 mars au 1er février.

Le dernier terme pour nous présenter les propositions des gouvernements cantonaux modifiant les projets d'horaire est avancé du 5 avril au 24 février.

Le dernier terme pour la réponse des administrations intéressées est avancé du 25 au 6 mars.

L'époque de convocation des conférences relatives aux horaires est fixée du 19 au 22 mars, au lieu du 20 au 25 avril.

Le dernier terme pour la fixation des horaires est le 15 mai.

3. Les administrations de chemins de fer sont invitées à se conformer autant que possible, aux besoins locaux en ce qui concerne les trains servant surtout au trafic local, afin d'éviter des perturbations dans la vie civile lors de la transition de l'heure actuelle à la nouvelle heure.

4. L'administration des télégraphes est invitée à continuer, après le 31 mai 1894, à recevoir, comme par le passé, l'heure de l'observatoire de Neuchâtel et à la réduire à l'heure de l'Europe centrale.

5. Il n'est pas entré en matière sur la demande du maintien de l'heure actuelle de Berne émanant d'un certain nombre de pétitionnaires.

Nous saisissons cette occasion, fidèles et chers confédérés, pour vous recommander avec nous à la protection divine.

Berne, le 11 décembre 1893.

Au nom du conseil fédéral suisse,
Le président de la Confédération,
SCHENK.
Le chancelier de la Confédération,
RINGIER.

EXTRACTS FROM REPORTS OF INSPECTORS OF SCIENCE AND ART SCHOOLS.

Mr. Barwell—

"Now that drawing in elementary schools is made obligatory for boys, it is of course of the highest importance to improve the teaching, and it is in the Schools of Art, and the Training Colleges, and to some extent in the Higher Grade Schools that means exist for educating the future teachers of drawing. A considerable impetus has been given to drawing in Training Colleges, and in those instances where some member of the staff has obtained a certificate above the ordinary D. better results have followed. There are, however, a large number of teachers who would be greatly benefited by some direction in methods, and even in the colleges assistance of the kind would be welcomed. How to compass this end is a matter for consideration and discussion.

"The Department has given some much-needed encouragement to elementary drawing in Ireland by according examinations to the teachers at the central establishment of the Christian Brothers at Clontarf, a privilege greatly valued there and made good use of. Similar advantages were granted to the large Training College at Drumcondra, but apparently the authorities there are ceasing to avail themselves of the permission.

"The Schools of Art proper continue to advance on the whole as every head master of experience knows when he compares the standard required for an award in the National Competition now with what it was 10 or 15 years ago. Many persons are apparently unaware that the reports of the examiners on the competition are necessarily directed to points where improvement may be expected, and that their aim is chiefly to blame and not to praise.

"The mechanical drawing preparatory to manual work in the Organised Science Schools is generally very well taught."

Mr. Gilbert R. Redgrave—

I find in the course of my visits to the Science and Art classes in various parts of the country that there is a manifest improvement in the equipment of the schools in the matter of apparatus and diagrams. Teachers are becoming more and more persuaded of the value of practical teaching, and I have been able in many cases to trace the benefits derived from the attendance at a short summer course in science at South Kensington. It is to be hoped that county councils will make arrangements for similar courses, which could with advantage be held in many of the principal provincial towns during the summer vacation. These occasions might at the same time afford facilities for teachers' conferences, and for lectures on pedagogics which could not fail to prove extremely useful.

Many intelligent teachers deplore their inability to use to the best advantage the apparatus provided, for the want of a properly fitted lecture table, or a supply of water and gas. Although this matter has been frequently pressed upon the notice of committees, school boards, and others, it cannot be too often repeated that even a very skilful science lecturer is placed at an enormous disadvantage in the absence of proper appliances for teaching, and that the average science teacher is often tempted to abandon experiments when he has to rely for their due performance upon a rickety table or a blackboard placed on the backs of two chairs.

In my inspection of organised science schools I have been much pleased with the results of the manual instruction; this teaching generally takes the form of simple exercises in woodwork. Many of these schools have now erected convenient and well-lighted workshops admirably arranged and amply supplied with tools. The work is in all cases done from drawings made by the students themselves. Much of this teaching has already been proved to be so useful, that in some cases the workshops are being enlarged so that all the boys in the school may learn the use of tools and obtain a little practical instruction. It is to be regretted that the organised science course as set forth in the directory does not seem so well adapted for girls as it is for boys, and if it were

possible to devise a special course for girls I feel certain that in many of the Higher Grade Schools advantage would be taken of organised science teaching for girls as well as for boys.

I have had several opportunities during the past year of visiting endowed schools of the old grammar school type, where in consequence of money grants from the county council, or the provision of scholarships, it has become possible to give prominence to science teaching, and this new departure has often proved a most valuable addition to the school work. It even bids fair sometimes to crowd out the classical side of the school which has been kept alive for generations by the stimulus of a few university scholarships. It should be always remembered, I think, in devising schemes for science schools, that a fair share of attention should be given to literary subjects, and especially to modern languages, so as to provide a proper all-round training. A science school, mainly or wholly devoted to science instruction, to the exclusion of everything else, is not adapted to the educational wants of the present day for boys of from 13 to 16 years of age.

In some of the schools of art which have lately come under my notice there is a tendency to take up applied art in the form of wood carving, metal embossing, &c. This appears to be partly due to the belief that technical education grants cannot be devoted to the pure art instruction to which we have hitherto attempted to restrict the work of such schools. This would seem to me to be to some extent founded upon a misconception, but I have been greatly pleased with some of the art work produced under these conditions, and I am assured that many students are tempted to prolong their studies at the school when they find the utility and value of their art training practically applied in this way.

Mr. C. A. Buckmaster—

Since the date of my last report the position of science schools in England and Wales has been almost revolutionized by the general application to technical instruction of the funds at the command of County Councils and County Boroughs for that purpose. Work which has previously been undertaken in only a limited number of places by the help of voluntary contributions, has now become possible in almost every part of the country. The greater freedom of the Evening School Continuation Code has given an option to many places either to establish a science or art class under this Department, or to teach the same subjects as part of an evening school course. I have not infrequently found that the difference between the two is often merely a matter of registration, and that one often passes into the other during a session. This, though it must lead to difficulties for both Departments, is not without advantages to a locality. Unfortunately irregularity of attendance seems very prevalent in these cases. Thus the London School Board charges a uniform weekly fee entitling the student to attend any subject taught in the evening school whether Code subjects or science or art, but out of numerous entries at the beginning of a session often not more than one-fourth of the number are found in attendance after Christmas. Of course the payment of a weekly fee is not the only cause of this falling off. Science and art classes mean hard work for the student, and those who join only for amusement, or who have no steadiness of character, will drop away whatever the method of payment.

I am glad to be able to report that the cases where the teachers are dependent for their remuneration on fees and grants are rapidly decreasing, and with the assumption by Committees of their duties in this respect, an increased interest in the work of the schools is noticeable. So long as new schools are springing up daily and new committees without wide experience in educational work are being constituted, the administrative and advisory portion of an Inspector's work will occupy an important place. Unless a school is being managed on right methods, and encouraging those subjects of most value to the locality, criticism on any particular teacher is of but little value, but when the school is well organised and the confidence of its Committee secured, a careful criticism of the teaching can then be made the most important element in the inspection. Unfortunately, to form a right estimate of a teacher's ability is no easy task. In elementary schools, or where

the teacher has been an elementary schoolmaster and is habituated to inspection, it is possible in one or two visits to form a fair idea of the strength or weakness of his method and knowledge, but in many secondary schools which are still comparatively new to inspection, I often notice a disinclination to teach while I am present, or a nervousness which inexperience might mistake for lack of teaching power. In evening classes of adult students the *vivâ voce* questioning is sometimes very unsatisfactory, not from ignorance on the part of the students, but from their fear of making mistakes before their fellow students, classes of teachers being generally worst in this respect.

Much has been done by the County Councils for the training of elementary school teachers in science and art subjects, but the science teaching in Training Colleges still leaves room for improvement. Only a minority of the colleges is provided with a laboratory for practical work in science or with suitably lighted and equipped rooms for instruction in art. The science work is too bookish, and the students rarely have the opportunity of performing the experiments which would naturally illustrate the teaching. It would be a laborious process to make each candidate in a Training College give a lesson illustrated with experiments before an Inspector, but some such alteration would undoubtedly be an advantage, notwithstanding the want of time in the two short and crowded years of Training College life.

Organised Science Schools have been steadily increasing in number. I have regularly emphasised the importance of maintaining a high standard of instruction in literary or commercial subjects as well as in those subjects directly subsidised by the Department. At least one modern language should be taught in these schools, but with this exception I have not attempted to enforce other subjects of instruction.

The alterations made in the Elementary Stage examination have been an almost universal topic of discussion during the past year. Generally the withdrawal of the Second Class certificate is more regretted than the withdrawal of the corresponding grant. At one school in Bristol I found an inclination to cease to work up boys for the Elementary Stage, and to present them for the Advanced, as owing to a boy's known failing in writing a full and complete answer to a question, he would be more likely to secure sufficient marks for a second class in the Advanced Stage than to pass in the Elementary Stage.

The number of chemical laboratories has largely increased, and the great majority of these have been inspected. Among occasional duties which have fallen to my share I may mention an arbitration between two Committees referred to me by joint agreement; inquiries under the Technical Instruction Act, and the work of holding special examinations in Practical Chemistry. I have also on several occasions been asked to advise on the most suitable subjects to be undertaken by Committees in the schools under their control.

Appendix B.

GENERAL STATISTICS OF SCIENCE SCHOOL EXAMINATIONS.

APPENDIX B.

1. RESULTS OF EXAMINATIONS IN SCIENCE IN 1892 and 1893.

TABLE A.—GIVING GENERAL STATISTICS OF EXAMINATIONS IN SCIENCE SCHOOLS.

—	1892.	1893.
Number of Schools under Teachers recognised by the Department	2,553	2,754
Number of Classes in the same	10,352	10,341
Number of individuals under instruction in the same	180,410	193,431
Number of the above who came up for examination	105,038	106,600
Number examined in addition to the above who were not in Schools under Teachers recognised by the Department	3,820	3,798
Number of individuals successful	84,081	58,099
Number of those who have not been successful in a previous year	44,016	23,018
Number of Papers worked in :—		
Subject.		
I. Practical Plane and Solid Geometry	29,007	31,755*
II. Machine Construction and Drawing	15,852	15,363
III. Building Construction	5,486	6,279

Appendix B.

General Statistics of Art Schools and Classes Examinations.

2. Results of Examinations in Art in 1892 and 1893.

Table A.—Giving General Statistics of Examinations in Art Schools and Classes.

—	1892.	1893.
Number of Schools under Teachers recognised by the Department	1,546	1,812
Number of individuals under instruction in the same	115,848	136,524
Number of the above who came up for examination	73,541	73,728
Number examined in addition to the above who were not in Schools under Teachers recognised by the Department	7,603	5,484
Number of individuals successful	39,169	41,612
Number of those who have not been successful in a previous year	20,201	21,612
Number of papers worked in :—		
Model Drawing, Subject 3*a* (Elementary Stage)	28,794	34,140
Freehand Drawing, Subject 2*b* (Elementary Stage)	56,394	60,314
Drawing in Light and Shade, Subject 5*b* (Elementary Stage)	—	10,088
Modelling, Subject 18*a* (Elementary Stage)	2,281	2,863
Anatomy, Subject 9	268	406
Model Drawing, Subject 5*a* (Advanced Stage)	5,667	5,201
Freehand Drawing, Subject 3*b* (Advanced Stage)	4,292	4,827
Drawing in Light and Shade, Subject 5*b* (Advanced Stage)	5,156	4,865
Principles of Ornament, Subject 22 (Elementary Stage)	372	1,120
Principles of Ornament, Subject 22 (Advanced Stage)	141	371
Perspective, Subjects 1*c* and 1*e* (Elementary Stage)	13,688	9,948
Do. do. (Advanced Stage)	589	237
Sciography	116	—
Plant Drawing in Outline, Stage 10*a*	3,087	—
*Design, Subjects 23*c* and 23*d* (Elementary Stage)	814	890
Do. do. (Advanced Stage)		677
Do. do. (Honours)	170	197
Compⁿ from a given Figure Subject (23*d*) in 1892		
Drawing from the Antique, Subject 8*b*²	865	1,081
Drawing from the Life, Subject 8*c*²	605	752
Architecture, Subject 1*d*	326	410
Historic Ornament, Subject 22*d*	84	144
Architectural Historic Ornament	105	—
Painting from Still Life, Subject 15	1,079	1,173
Painting Ornament in Monochrome, Subject 11*a*	860	1,048
Drawing the Antique from Memory, Subject 8*f*	122	181
Architectural Design, Subject 23*b*	46	84
Modelling from the Life, Subject 19*h*	33	51
Do. do. Antique, Subject 19*i*	64	140
*Modelling. Design, Subjects 23*e* and 23*f* (Elementary Stage)	87	190
Modelling. Design, Subjects 23*e* and 23*f* (Advanced Stage)		125
Modelling. Design, Subjects 23*e* and 23*f* (Honours) Figure Subject (23*f*) in 1892	22	58
Casting from Waste Moulds	16	—
Total number of Papers worked	126,143	141,581

* These subjects were not divided into Stages in 1892.

Appendix B.

General Statistics of Art Schools and Classes Examinations.

TABLE A.—GIVING GENERAL STATISTICS OF EXAMINATIONS IN ART SCHOOLS AND CLASSES—*cont.*

——	1892.	1893.
Number of Provincial Centres where Examinations were held - - - - - -	1,338	1,578
Number of Metropolitan Centres where Examinations were held (including South Kensington Museum) -	129	140
Total number of Papers worked - - -	126,143	141,581
Total number of Successes - - - -	54,142	62,153
Total number of Failures - - -	72,001	79,428

Appendix B.

DETAILS OF SUCCESSES AND FAILURES IN ART SCHOOLS AND CLASSES EXAMINATIONS.

TABLE B.—GIVING THE DETAILS OF SUCCESSES AND FAILURES IN EACH SUBJECT (*see* TABLE A.).

Subject.	1892.					1893.				
	No. Excellent.	No. Class 1.	No. Class 2.	Failures.	Total.	No. Excellent.	No. Class 1.	No. Class 2.	Failures.	Total.
Model Drawing, Subject 3*a* (Elementary Stage)	—	3,728	8,369	16,697	28,794	—	4,621	9,161	20,358	34,140

3. SCHOOLS AND CLASSES

AND NUMBER OF STUDENTS, &c.

3. LIST of SCHOOLS and CLASSES (Science and Art) showing the NUMBER of STUDENTS under INSTRUCTION, with the PRIZES obtained by each SCHOOL in the session 1892–93, the FEES received from the students, and the GRANTS made by the DEPARTMENT. Organised Science Schools are distinguished by being printed in black type.

The amounts appearing in Italics are payments to Science Classes on the results of the Examinations in Art subjects. Ind. = Industrial Classes. M.C. = Middle Classes (see Science and Art Directory, page 13.)

In this and previous years the figures in these columns represent respectively the number of students examined, the number successful, and the number who obtained prizes.

15. REPORT of the REGISTRAR of the NATIONAL ART TRAINING SCHOOL, South Kensington.

SIR,

I HAVE the honour to submit my report on the National Art Training School for the year ending 4th October 1893.

In the period over which the report extends, viz., from October 1892 to October 1893, the number of Students in Training receiving instruction has been 39, of National Scholars 19 and pupil-teachers 3, one unpaid.

These, besides being free students, received weekly allowances of from 10*s.* to 35*s.*

During the year seven Students in Training have been appointed to Masterships of Schools of Art, viz., C. Ripper, to Lancaster; H. C. I. Fripp, as assistant master in the National Art Training School; G. Cromack, to Stourbridge; A. Shuttleworth, to Handsworth; H. Allen, to Canterbury; Charles Armstrong, to City of London School of Art, and W. H. Milnes, to Walthamstow; one National Scholar to the Science and Art Technical School, Plymouth, and three general Students, viz., L. Edmunds, to Donegal Art Class; T. B. Cooper, to Bristol; and J. H. Horwell, assistant master, to York.

Students in training have given temporary assistance at the Art Schools at Bridgewater, Cambridge, Southport, Limerick, Belfast, and Canterbury.

Four Students in Training have given instruction in London district schools as a part of their training. One Student in Training, R. Bryden, whose time has expired, has retired.

Eight National Scholars whose time has expired have retired:—F. Jahn, G. Morrow, W. Hindley, N. McLellan, S. H. Moss, W. G. Thomson, W. J. Tonner, O. Wheatley; and one, Louise Brown, resigned.

Four new candidates have been admitted as Students in Training, viz., W. L. Hankey, Chester; G. Fisher, Bristol; T. Crook, N.A.T.S.; and P. Bell, Royal Academy.

Seven new candidates have been admitted as National Scholars, viz.:—T. Cartwright, Macclesfield; S. C. Houghton, Polytechnic; J. Ives, N.A.T.S.; G. W. Kingman, Kidderminster; A. A. Orr, Westminster; C. R. Warren, Birmingham; and Margaret L. Simpson, N.A.T.S.

Two Local Scholars, 10 Royal Exhibitioners, and six County Council Scholars have also been admitted.

One hundred and eighty-nine students have been permitted to attend the school without payment of fees, viz., 79 females and 110 males, consisting of:—

Students in Training - - - - - -	39
National Scholars - - - - - -	19
Pupil-teachers (one unpaid) - - - -	3
Ex-students in Training, National Scholars, and others having passed advanced examinations - - -	115
Engineers - - - - - - -	13
Total - - -	189

Twenty-nine students fulfilling the requirements of paragraph 27, page 83 of the Art Directory have been admitted at half fees.

A total of 558 free, half-fee, and whole-fee-paying students have attended the school, viz.:—

	236 males.
	322 females.
Total	558

a decrease of 4 on last year.

The total amount of fees paid by students has been—

£	*s.*	*d.*	
1,741	1	8	from 283 day students.
139	11	3	„ 98 evening „
Total - £1,880	12	11	

a decrease on last year of 61*l.* 0*s.* 4*d.*

Appendix B.

NATIONAL ART TRAINING SCHOOL.

The schools were open for study on 196 days, and the total number of attendances was 74,062; the average daily attendance being 378; the smallest daily attendance being 152, on the 10th May 1893; and the largest, 493, on the 2nd March 1893.

The number of attendances, as compared with last year, shows an increase of 4,682, and the daily attendance an increase of 13.

The following table shows the successes gained by students of the School:—

Students.	Numbers of Successes.													
	In Department's Examinations.											In School Examinations.		
	National Competition Awards.				Advanced Stage and Honours.				Elementary Stage.					
	Gold Medals.	Silver Medals.	Bronze Medals.	Book Prizes.	Queen's Prizes.	Excellent.	First Class.	Second Class.	Queen's Prizes.	First Class.	Second Class.	Silver Medals.	Book Prizes.	Other Prizes.
Free (receiving only honorary awards in respect of successes gained by them at the Examinations and in the National Competition).	4	26	40	99	17	56	126	199	—	—	—	10	18	4
Fee-paying	1	2	7	10	1	16	158	117	2	109	44			
Totals	5	28	47	109	18	72	284	316	2	109	44	10	18	4

Three Travelling Scholarships of 50*l.* each were offered for competition among the Free Students, and awarded as follows:—

1st, with Gold Medal, to Oliver Wheatley (National Scholar);
2nd, with Silver Medal, to F. V. Burridge (Student in Training); and
3rd, with Bronze Medal, to R. E. J. Bush (Student in Training).

The 1st place in the competition was taken, for the second time, by J. H. Parkyn (Student in Training). A Special Certificate of his success being awarded to him, he waived his claim to the Scholarship.

The Certificates gained by Students of the Schools were:—

Art Master's Certificates.					Art Class Teacher's Certificates.	Second Grade Certificates.	Elementary Drawing Certificates.	Total.
Group I.	Group II.	Group III.	Group V.	Group VI.				
12	13	2	1	6	21	1	7	63

Twenty-four lectures on Decorative Art and Historical Ornament have been delivered during the year in the Public Lecture Theatre, South Kensington Museum, by Professor Roger Smith, G. Aitchison, Esq., A.R.A., and R. Elsey Smith, Esq., at which 1,116 attendances were registered, or an average of 46 attendances per lecture.

A. Thomson, Esq., M.A., M.B., has given a course of 26 lectures on Anatomy in the same place and during the same period, and the attendances of the students have been 1,795, an average of 69 per lecture.

I have the honour to remain, Sir,
Your obedient servant,
SUSSEX W. LENNOX, Lieut.-Gen.,
Registrar.

To the Principal,
National Art Training School,
22nd December 1893.

Mining, and		4	2	—	2	23	31	1	2	3	34	34
Mine Surveying		3	2	—	1	22	28	1	1	2	30	30

Total number of individual students	304
Of which—Government students	141
Students paying fees	163

The amount received for fees during the session was 3,959*l.*

Number of Science teachers who received instruction from 5th to 27th July 1893 in—

	Number who attended.
Agriculture and Agricultural Chemistry	35
Botany	27
Chemistry, Inorganic	33
Chemistry, Organic	15
Heat	48
Steam and the Steam-engine	39
Physiographic Geology	45
Metallurgy	13
Total	255

Appendix C.

ROYAL COLLEGE OF SCIENCE, LONDON.

Three courses of lectures to working men were delivered by the Professor of Geology, the Professor of Mining, and the Professor of Metallurgy, as follows:—

	Number who attended.
"Ocean Floors," by Prof. J. W. Judd, F.R.S. - -	407
"Ore and Stone Mining," by Prof. C. Le Neve Foster, F.R.S. - - - - - - -	144
"Some recent advances in Metallurgy," by Prof. C. Roberts Austen, C.B., F.R.S. - - - - -	321

DIVISION I.—MECHANICS AND MATHEMATICS.—PROFESSOR GOODEVE.

Mechanics and Machine Drawing.—The courses of lectures and class instruction in Mechanics and Machine Drawing, Part I., extending from October 1892 to February 1893, were attended by 55 students.

Fifty-three entered for the final examination, of whom 17 passed in the first class, 31 in the second class, and 5 failed to pass.

Five students took up Mechanics, Part II., and at the examination in February 1893, four passed in the first class, and one failed. Three of these proceeded to Mechanics, Part III., and at the final examination in June 1893, two passed in the first class and one failed.

The summer course to Science teachers consisted of lectures and class instruction in Steam and the Steam Engine. It was attended by 39 students, and on the results of examinations 18 of these were placed in the first class, and 21 in the second class.

The instruction in Descriptive Geometry, given on Saturday mornings throughout the session, was attended by 65 students, of whom 63 entered for the sessional examination in June 1893; of these 30 passed in the first class, 29 in the second class, and 4 failed to pass.

Since the date of the last report the ½ h.p. Otto Gas Engine in the Mechanical Laboratory has been replaced by an engine of new type. A series of diagrams and some elementary models are being made for the purpose of explaining the alterations in the construction of the engine.

A paper by Mr. Harrison on "Radial Valve Gears" was awarded a Telford premium by the Institution of Civil Engineers in October 1893, and is published in Vol. 113 of the Proceedings of the Institution.

Mathematics.—During the session 124 students attended the mathematical classes, and at the examinations 62 qualified in Class A., 61 in Class B., 26 in Class C., 18 in Class D., and 3 in Class E.

DIVISION II.—PHYSICS.—PROFESSOR RÜCKER, F.R.S.

The courses on Physics were attended by 14 students during the first term and 83 during the second term.

Course I.—The first year course was attended by 71 students. Fifty-nine entered for the final examination, of whom 21 were placed in the first class, and 32 in the second class.

Courses II. and III.—Nine students presented themselves for examination, of whom four passed in the first class and five in the second. These two courses are now fused into one, which will in future be Course II.

Summer Course.—Forty-eight Science teachers attended the summer course of lectures on Heat, which was delivered by Mr. Boys.

The assistants in the Physical Laboratory during the last session were Messrs. Sydney Wood, Adamson, W. Williams, and Harrison.

Research.—The reduction and discussion of the observations made for the Magnetic Survey of the United Kingdom have been continued.

Messrs. Gray and Watson were engaged on this work during the whole of the first term. It is hoped that the results will be communicated to the Royal Society during the present session.

Mr. Boys has continued and nearly completed his experiments on the constant of gravitation.

Researches on the following subjects are also in progress:—

On the thermal conductivity of bad conductors, by Dr. Hoffert.

On Verdet's constant, by Messrs. Watson and Rodger.

On the velocity of light in a moving medium, by Mr. Edser.

Mr. Stansfield has been investigating questions connected with the electrical resistance of Thin Liquid Films which have been suggested by the work of Professors Reinold and Rücker on that subject.

Some further experiments on the permeability of magnetite have been made by Messrs. Williams and Richardson.

In the spring a number of observations were made both at Kennington and at South Kensington to elucidate the probable effects of an electric railway in Exhibition Road, on the instruments in the Physical Laboratory.

The following papers were published during the year:—

On the Thickness and Electrical Resistance of Thin Liquid Films, by A. W. Reinold, F.R.S., and A. W. Rücker, F.R.S. Phil. Trans., Vol. 184. A. pp. 505–529.

On the Magnetic Shielding of two Concentric Spherical Shells, by A. W. Rücker. Brit. Ass. Rep., 1893.

On the Drawing of Curves by their Curvature, by C. V. Boys. Phil. Mag., July 1893.

Astronomical Physics.—Professor Lockyer, C.B., F.R.S.

The course of evening demonstrations extended from the beginning of November 1892 to the end of May 1893, and the course of lectures and laboratory work from June 15 to July 1, 1893.

The number of students in regular attendance was 65; of these 20 were National scholars, 7 were Royal exhibitioners, local exhibitioners, and free students, 13 were teachers in training, and the remainder were associate students paying fees. 61 of these presented themselves for examination, and in addition 9 students, who attended the lectures only, were re-examined. 28 were placed in the first class, 33 in the second, and 9 failed to pass. The prize of books, value 3*l.*, was divided between W. E. Tubbs and W. Whalley.

Owing to the large number of students and the limited accommodation of the Observatory, it was necessary to arrange the students in four classes, each student thus attending the Observatory once in two weeks for seven months.

The course of evening work was very similar to that of last year, consisting of instruction in the use of the Nautical Almanac, transit instrument and chronograph, equatorial, micrometer, altazimuth, and stellar spectroscopes. The use of artificial stars was continued for transit observations, and for micrometric measures of double stars. Photographs of stellar spectra were also taken by the students.

The weather was very unfavourable, but the work done was satisfactory.

The 3-foot speculum, which has been kindly presented by Dr. A. A. Common, F.R.S., was available for the use of the students.

During the June course many of the students studied the changes in the telescopic appearances of sun-spots from day to day. Solar prominences were also shown to them, and as an exercise in the manipulation of the telescope, the planet Venus was frequently observed in full daylight.

The laboratory work was the same as in former years, consisting of the construction of a telescope, orbit and sextant models, and instruction in the uses of the sextant, theodolite, magnetic instruments, celestial and terrestrial globes, spectrum analysis, and spectrum photography.

It was only found necessary to modify the scheme of work which had been previously adopted by making the demonstration in the Western Galleries a recognised part of the course. The usual class lists and time-tables were supplied to the students to prevent confusion.

The time-table was as follows:—

Appendix C.

ROYAL COLLEGE OF SCIENCE, LONDON.

ASTRONOMICAL PHYSICS.

DEMONSTRATIONS, JUNE 1893.

TIME-TABLE OF CLASSES.

Class.	Thursday, 15th June Friday, 16th June.	Saturday, 17th. Monday, 19th. Tuesday, 20th (morn.).	Tuesday, 20th (after.). Wednesday, 21st. Thursday, 22nd.	Friday, 23rd. Saturday, 24th. Monday, 26th (morn.).	Monday, 26th (after.). Tuesday, 27th. Wednesday, 28th.	Thursday, 29th. Friday, 30th.	Saturday. 1st July.

Verniers and Sextant model, Telescope construction, Globes } Physical Laboratory.

Geodetic and magnetic instruments } Observatory grounds.

Spectrum observations - Astronomical Lecture Theatre.

Spectrum photography - Astronomical Research Laboratory.

The thanks of the Professor are due to the following gentlemen, who acted as assistant demonstrators under the direction of Mr. Fowler :—

J. Bruce - -	National scholar.
J. D. Crabtree -	Teacher in training.
J. Dowling - -	" "
B. North - -	" "
J. Thompson - -	" "
C. H. Robinson -	" "
J. Grigor - -	" "
A. Taylor - -	Former demonstrator.

Messrs. Crabtree and North, who were attached to the Astronomical Department throughout the session, kindly volunteered their assistance in the evening demonstrations and took entire charge of the classes in April and May when Mr. Fowler was absent on the Eclipse Expedition.

Research Work.—Some of the results of the various investigations in hand are included in a paper communicated to the Royal Society by the Professor, entitled " On the Photographic Spectra of some of the Brighter Stars." (Read December 8th, 1892.) This is a discussion of 443 photographs of the spectra of 171 stars.

Messrs. Crabtree and North computed the positions of many of the brighter stars at several epochs B.C., in connection with the investigations of the orientation of Egyptian temples. The results are included in a work entitled " The Dawn of Astronomy," which has been published by the Professor.

Mr. Fowler was a member of the expedition to West Africa to observe the total eclipse of the sun on April 16th. Many successful spectrum photographs were taken and an account of the results will be published in due course.

Mr. W. Shackleton, formerly a research student in Astronomical Physics, and now computer to the Solar Physics Committee, accompanied the expedition to Brazil to observe the total solar eclipse. The results were very satisfactory and the reductions are in hand.

DIVISION III.—CHEMISTRY.—PROFESSOR THORPE, F.R.S.

The instruction in this division consisted of :—

(1.) A course of 70 lectures on inorganic chemistry and on the principles of chemical philosophy, extending from the beginning of October to the middle of February, delivered by the Professor.

(2.) A course of 60 lectures on organic chemistry, extending from the middle of February to the beginning of June, delivered by the Assistant Professor, Dr. W. Palmer Wynne.

(3.) A course of 16 lectures on the theory of chemical analysis, during the first term, delivered by Mr. A. E. Tutton.

(4.) A course of 15 lectures on chemical physics, dealing with the relationships existing between the physical constants of liquids and their chemical nature, during the second term, delivered by Mr. J. W. Rodger.

A course of lectures on the " Methods of determining Molecular Weights " was given to a class of 80 science teachers during July by the Professor. The Lecture Assistant, Mr. G. S. Newth, also gave a series of demonstrations to science teachers on the methods of illustrating the elementary facts of chemistry in class instruction.

The number of students receiving chemical instruction, excluding the science teachers who came up for for the summer courses, during the session was 132. The laboratories are still inconveniently crowded, especially during the winter term. Some relief was gained by fitting up the east chemical laboratory, vacated by Professor Judd, with 20 working places in 5 sets of 4 each, which are occupied by advanced students of both the north and south chemical laboratories. The ventilation of the laboratories is, however, totally inadequate for so large a number of students.

The conduct and diligence of the students in the various classes have been satisfactory.

Research Laboratory.—Mr. L. M. Jones, B.Sc., completed his observations on the thermal expansions of several hydrocarbons and their derivatives. He then commenced an investigation on the physical properties of the isomeric dipropargyls.

Mr. G. H. Perry continued his attempts to prepare nitrogen oxyfluoride and studied the preparation of a series of compounds of tin and chromium.

Mr. A. Greeves investigated the methods of preparing pure isopentane by the reduction of amyl alcohols.

The following papers were published during the session in the Journal of the Chemical Society:—

Fluorsulphonic Acid. By T. E. Thorpe, F.R.S., and Walter Kirman, Assoc. R.C.S. 1892. p. 921.

Note on the Interaction of Iodine and Potassium Chlorate. By T. E. Thorpe, F.R.S., and G. H. Perry, Assoc. R.C.S. 1892. p. 925.

Note on the Constitution of Nevile and Winthers Orthotoluidinesulphonic Acid and of the Sulphonic Acids of Orthochlorotoluene and Orthobromotoluene. By W. Palmer Wynne, D.Sc. 1892. p. 1036.

Action of Sulphuryl Chloride on Acetorthotoluidide and Acetoparatoluidide Mono-Di-and-Tri Chlorotoluenesulphonic Acids. By W. Palmer Wynne, D.Sc. 1892. p. 1042.

The Determination of the Thermal Expansion of Liquids. By T. E. Thorpe, F.R.S. 1893. p. 262.

The Thermal Expansion and Specific Volumes of certain Paraffins and Paraffin derivatives. By T. E. Thorpe, F.R.S., and Lionel M. Jones, B.Sc., Assoc. R.C.S. 1893. p. 273.

Connection between the Atomic Weight of contained metals and the magnitude of the Angles of Crystals of Isomorphous Series. A study of the Potassium, Rubidium, and Cæsium Salts of the monoclinic series of double Sulphates $R_2 M (SO_4)_2 6 H_2O$. By A. E. Tutton, Assoc. R.C.S. 1893. p. 337.

Kopp Memorial Lecture. The Life Work of Hermann Kopp. By T. E. Thorpe, F.R.S. 1893. p. 775.

The preparation of Active Amyl Alcohol and Active Valeric Acid from Fusel Oil. By W. A. C. Rogers, Assoc. R.C.S. 1893. p. 1130.

Published in the Journal of the Photographic Society.

A Chemical Study of Mercurial Intensification. By Chapman Jones. N.S. XVII. 95.

Analytical Laboratories.—The South Chemical Laboratory was under the charge of the Assistant Professor, Dr. W. Palmer Wynne, who was assisted by Mr. W. Tate and Mr. H. Grime.

The laboratory during the first term was attended by 67 students, of whom 36 were engaged in qualitative analysis; 20 passed through a short course of quantitative analysis in addition to the qualitative course; 10 worked entirely at quantitative analysis, and one was engaged in research work.

During the second term there were 19 students in the laboratory, and of these one worked at qualitative analysis, one at both qualitative and quantitative analysis, 15 at quantitative analysis and two were engaged in research work.

The course in quantitative analysis consisted of mineral analysis, gas and water analysis, organic analysis, determination of vapour densities, determination of molecular weights, analysis by electrolysis, and preparation of pure substances.

The short course in July was attended by 46 teachers of whom 34 were engaged in qualitative analysis, 11 in qualitative and quantitative analysis, and one in quantitative organic analysis.

Demonstrations were given during the course on the methods of qualitative organic analysis.

The North Chemical Laboratory was under the charge of Mr. Chapman Jones, who was assisted by Mr. A. E. Tutton and Mr. W. Kirman.

During the winter term the laboratory was attended by 53 students, seven of whom devoted the whole of their time and 19 a part of their time to quantitative work.

During the summer term 16 students worked in this laboratory, 14 of whom were engaged in quantitative work.

The students of agriculture worked upon soils, manures, feeding stuffs, agricultural products, &c., and the others upon minerals, alloys, natural waters, gases, the determination of vapour densities, organic analysis, spectrum analysis, preparations, &c.

Practical instruction in photographic methods was given to a select number of students on one afternoon in each week by Mr. Chapman Jones.

During the short course in July instruction was given to 35 students in agricultural chemistry, four of whom did quantitative work.

Division IV.—Biology.—Zoology.—Assistant Professor G. B. Howes.

The course in Elementary Animal Biology commenced on October 5th and ended in the examinations held on December 22nd and 23rd. Twelve students were in attendance, all of whom presented themselves for examination, four obtaining first-class certificates. 57 lectures were given by the Assistant Professor.

The advanced course was attended by two students, one of whom was examined and passed in the first class. Class demonstrations were alone given during this course.

A free place was granted Mr. J. E. S. Moore, in the Huxley Laboratory, for the continuation of his researches of the previous summer in cytology, and Mr. J. H. Vanstone was granted a research studentship for special work on the Mollusca. Mr. Vanstone left at Easter, to fill the office of Resident Curator to the Liverpool Biological Society's station at Port Erin, Isle of Man. The undermentioned papers were published by these gentlemen.

Moore, J. E. S. :—

"Observations upon *Amœba*, with especial reference to the existence of an apparent micro-nucleus in that organism." Ann. and Mag. Nat. Hist., Vol. XI., p. 149.

"On the structural differentiation of the Protozoa, as seen in microscopic sections." Jour. Linn. Soc. Zool., Vol. XXIV., p. 364.

"Some points in the origin of the Reproductive Elements in *Apus* and *Branchipus*." Qu. Jour. Micr. Sci., Vol. XXXV., p. 259.

"Mammalian Spermatogenesis." (Preliminary communication.) Anat. Anzeiger., Bd. VIII., p. 683.

Vanstone, J. H. :—

"Some points in the Anatomy of *Melongena melongena*." Jour. Linn. Soc. Zool., Vol. XXIV., p. 369.

Marshall Scholarship.—This was awarded for the Session to Mr. H. M. Bernard, M.A., Cantab., who was occupied with a research into the comparative Morphology of the Arachnoidea, with especial reference to the Solpugidæ. Mr. Bernard's work is still unfinished, but, in connexion with it, the following preliminary papers have appeared.

Bernard, H. M. :—

"Additional notes on the origin of Tracheæ from Setiparous Glands." Ann. and Mag. Nat. Hist., Vol. XI., p. 24.

"On the Terminal Organ of the Pedipalp of *Galeodes*, and the discovery of a homologous organ in the pedipalp of *Phrynus*." *Ibid.*, p. 28.

"The Coxal Glands of *Scorpio*." *Ibid.*, Vol. XII., p. 54.

"On two new species of *Rhax*." Jour. Linn. Soc. Zool., Vol. XXIV., p. 361.

"The 'head' of *Galeodes*, and the Procephalic Lobes of Arachnidan Embryos." Zoolog. Anzeiger, 1893, No. 426.

"Notes on some of the Digestive Processes in Arachnids." Jour. R. Microscp. Soc., 1893, p. 427.

In addition to the foregoing, the following papers were published during the Session.

Howes, G. B. :—

"Notes on Variation and Development of the Vertebral and Limb-Skeleton of the Amphibia."

"On the Coracoid of the Terrestrial Vertebrata."
"Notes on an abnormal sternum of the Common Marmoset."
All in P. Z. S., for 1893.
"On the Mammalian Pelvis, with especial reference to the young of *Ornithorhynchus anatinus.*" Jour. Anat. and Phys. Vol. XXVII., p. 343.

Woodward, M. F.:—
"Further observations on variation in the Genitalia of British Earthworms."
"On the Development of the Teeth of the Macropodidæ."
Both in P. Z. S. for 1893.

In addition to the appointment gained by Mr. Vanstone, above-mentioned, Mr. T. Riches, one of the advanced students of the Session, was at its close appointed to a Science Mastership in the Dundee High School; and Mr. W. G. Ridewood, a past student, assistant to the Director of the Natural History Museum, was, in the autumn of 1892, elected Lecturer on Biology to the St. Mary's Hospital School.

During the session, purchases of valuable material were made from the dealers Gerrard and Fritsch; and for the gift of specimens, some of which are of great value, the best thanks are due to the late Professor Wood Mason, of Calcutta, Professors W. Baldwin Spencer, of Melbourne, and A. H. Dendy, of Christchurch, New Zealand; to Drs. H. Woodward, F.R.S., A. Alcock, of Calcutta, J. Beard, and F. J. McKettrick, to Messrs. D. Morris, J. J. Fletcher, of Sydney, W. E. Hoyle, and W. Saville-Kent, as also to Messrs. P. F. J. Corbin, S. Pace, and M. K. Rokugo, recent students in the Division.

BOTANY.—ASSISTANT PROFESSOR J. B. FARMER.

The elementary class in botany began on January 5th, 1893, and was attended by 13 students, all of whom presented themselves for examination on February 13th. Four students were placed in the first class. Thirty-one lectures were given by the Assistant Professor.

The Assistant-Professor would express his regret at the extremely short period of time allotted to the elementary teaching of botany; at least three months is required for an adequate treatment of the subject.

The advanced class commenced on October 5th, 1892, and was at first attended by three students, and was joined by a fourth after Christmas. Two of the four gained a first class in the sessional examination held in June 1893, the Marshall Scholarship being awarded to one of them (Mr. J. Reeves), and the Forbes Medal to the other (Mr. H. B. Lacy). Besides the class of regular advanced students three occasional students attended the laboratory course. About 60 lectures on advanced morphology, and also a short course of demonstration lectures on vegetable physiology were given by the Assistant-Professor.

Mr. Boodle, the Demonstrator, also delivered a course of 26 advanced lectures on Algæ.

Several botanical excursions were undertaken during the spring and summer.

Much time has been devoted to arranging and increasing the teaching collections, which have been enriched by gifts from various sources, amongst which may be mentioned a collection of fruits from Professor Huxley, specimens from Professor Oliver, and from the Royal Gardens, Kew, and a collection made by the Assistant-Professor in the Tropics in 1891.

A collection of fruits, which was acquired about two years ago, has been partially arranged so as to be made accessible to students.

A free table was granted in the early part of the session to Mr. Worsdell, a former student of the college, to enable him to carry on a research, in association with Mr. Boodle, on the comparative anatomy of the Casuarinæ. This work is now complete and will be published shortly.

The following papers have been published during the year by the Assistant-Professor:—
"On the Embryogeny of Angiopteris," An. Bot., 1892.

"On certain peculiarities connected with nucleus division in Hepaticæ," Proc. Linn. Soc. (not yet printed).

"On the Formation of Pollen in Lilium Martagon," Brit. Assoc. Rep., 1893.

During the month of July 1893 a summer course for science teachers was conducted by the Assistant-Professor, who delivered 20 lectures. Miss E. Healy and Mr. J. Reeves were appointed Assistant-Demonstrators. The class was attended by 27 science teachers.

DIVISION V.—GEOLOGY.—PROFESSOR JUDD, F.R.S.

The courses of instruction in Geology and Mineralogy were attended during the first term of the session by seven students, who were instructed in Part III. (Systematic Palæontology and Stratigraphical Geology); while on two days of the week 47 students from the mining and metallurgical divisions received special training in Determinative Mineralogy. This course of instruction consisted of a series of lectures by Mr. Rutley on the minerals which occur as ores of the useful metals, with practical instruction under the Demonstrators and Assistants in the discrimination of ores by the blowpipe and other methods.

Of the students attending the Advanced Course, Part III., four presented themselves for examination, and three were awarded by the Professor and the coadjutor-examiner a first class, and one a second class. The examination in Determinative Mineralogy was taken by 44 students, and in the character of the work done by the candidates, there was a very marked advance shown on the results of the preceding year.

The elementary class during the second term of the session was attended by 70 students, a number which caused the laboratory to be inconveniently crowded. Arrangements have now been made that in future the elementary instruction shall be given in two adjoining laboratories—the room next the temporary lecture theatre being no longer required for examination purposes. This room is in future to be used as a museum of teaching specimens, and at the same time as an additional elementary laboratory.

Another great improvement in the provision for the geological teaching has been effected by the transfer of the geological and mineralogical collections of the Science Museum from the upper gallery to a room adjoining those in which the geological teaching is carried on. The Geological, like the Mining division of the school, has thus been placed in direct connexion with the collections of the Science Museum, and the arrangement is found to be a very satisfactory one.

Of the 70 students attending the Elementary Course, 65 entered for the examination, 28 passing in the first class, and 30 in the second class. Three students were re-examined, all of them passing in the second class. Of the three students attending the Advanced Course in the second term (Part II. Mineralogy and Petrography) two passed in the first class, while one was unfortunately prevented by sickness from attending the examination. The Murchison medal and prize of books for the year was awarded to Mr. J. Bickerton Morgan.

During the months before Christmas, the professor gave a course of six lectures to working men on "Ocean Floors." The lectures which were delivered in the theatre of the Museum of Practical Geology were listened to by a very attentive and intelligent audience.

Summer Course in Physiographic Geology.—45 science teachers came up for a course of practical study in the month of July. The lectures were given by the professor, and the large and well-ventilated rooms now occupied as laboratories enabled the work to be carried on in much greater comfort than in former years.

Research.—Although there are no rooms which can be set apart as Research Laboratories in the buildings occupied by the Geological Division, it is possible to use portions of the elementary laboratory for research work during the first term of the session.

Mr. Hume, who had taken his B.Sc. degree at the London University with Honours, being anxious to prepare a thesis for his Doctor's degree, special facilities were given him for carrying on a series of investigations.

Appendix C.

ROYAL COLLEGE OF SCIENCE, LONDON.

During the preceding long vacation, he had visited most of the typical localities for studying the order of succession of the Cretaceous strata, and in the laboratory of the college, he subsequently prepared and studied the various insoluble residues of the different varieties of chalk. The results of his studies were embodied in a memoir, "Chemical and Micro-mineralogical Researches "on the Upper Cretaceous Zones of the South of England."

For this thesis Mr. Hume was awarded his Doctor's degree, and it has since been published as a separate work.

Mr. J. Bickerton Morgan commenced a research upon the cause of the disappearance of the shells of Pteropoda in deep-sea oozes, but the work was unfortunately interrupted by illness.

Mr. F. Chapman, the Lecture and Laboratory Assistant, has carried on further studies among the microzoa of various rocks, and has published the following papers:—

"On Microzoa from the Phosphatic Chalk of Taplow." Quart. Journ., Geol. Soc., November 1892.

"The Foraminifera of the Gault of Folkestone, Part 3." Journ. Roy. Microscop. Soc., December 1892.

"On Oolitic and other Limestones with sheared structure, from Ilfracombe. Geol. Mag., March 1893.

The Professor, besides continuing his researches upon the minerals and rocks of Burma, supplied to him by the Secretary of State for India, has published the following memoirs:—

"Additional Note on the Lamellar Structure in Quartz-crystals, and the Methods by which it is Developed." Mineralogical Magazine, Vol. X., No. 46.

"On Inclusions of Tertiary Granite in the Gabbro of the Cuillin Hills, Skye; and on the products resulting from the Partial Fusion of the Acid by the Basic Rock." Quart. Journ. Geol. Soc., May 1893.

Division VI.—Principles of Agriculture.—Professor Wrightson.

The winter course consisted of 30 lectures, supplemented by laboratory instruction. The number of students who attended the winter course was 6, and the number who attended the summer course to teachers was 35.

The winter course was arranged so as to give as clear an idea as possible of the principles which should guide agriculturists in the cultivation of the soil, the growth of crops, and the treatment of animals. The subject is very comprehensive, and could not be dealt with fully in so short a course. The composition and properties of the soil, and the subject of land drainage, were fully considered. The subject of rotations of crops, and the cultivation of some of the most important crops, formed a second division. The science of manuring, and the relative merits of "artificial" and natural manures, occupied four or five lectures. The origin and varieties of domesticated animals, the theory of scientific feeding of live stock, and the science of breeding improved types of animals, closed the course.

The summer course to teachers was well attended, and lantern slides were used to illustrate a large number of implements, varieties of animals, insect plagues, animal parasites, and comparative growths. The close connexion between the practice of the best farmers and the theory of their business, as unfolded by pure scientists, was explained, and suggestions for further improvements were made.

The students were daily employed in the North Chemical Laboratory under Mr. Chapman Jones and Mr. Tutton, upon the analysis of soils, manures, and feeding stuffs.

Division VII.—Metallurgy.—Professor W. C. Roberts-Austen, C.B., F.R.S.

The metallurgical course was attended in the first term by 41 students, and in the second by 34, a total of 75. The number of individual students was 57 as compared with 51 in the preceding year.

The Bessemer Medal and prize of books was awarded to Mr. A. Gibb.

Mr. Alfred Stansfield presented himself for the Honours examination in Metallurgy, and submitted a thesis on the copper-tin alloys. Mr. W. Gowland was associated with Prof. Roberts-Austen as examiner, and as they were satisfied with Mr. Stansfield's written examination, and his thesis, he was duly awarded the "Honours" diploma of the College.

The annual excursion of the class conducted by Dr. E. J. Ball was of somewhat longer duration than usual, as it extended over a period of nearly a fortnight. A large number of typical works were visited at Swansea, Dolgelly, and in the Widnes District.

Mr. MacArthur has presented to the College a complete working plant as used for the extraction of gold by the "Cyanide" process. This has been erected near the stamp battery, for use in conjunction with it, as it is important that students should be familiar with the working of this process, gold to the value of more than 800,000*l.* having been extracted by its aid during the past year in South Africa alone.

Thirteen Science teachers attended a summer course of instruction in the Metallurgical laboratory from the 5th to the 27th of July, and a special course of lectures was delivered to them.

The Professor presented a second Report upon the results of an investigation into the molecular structure of metals and alloys to the Institution of Mechanical Engineers. In this Report an account is given of experiments which have been made with a view to ascertain the effect of certain impurities present in commercial copper, upon the metal itself. The Report, which was an elaborate one, occupies, with the interesting discussion to which it gave rise, over one hundred pages in the Proceedings of the Institution. Prof. Roberts-Austen also made a communication to the Iron and Steel Institute on his autographic pyrometers, which have been adopted in many iron works. Its use has enabled notable economies of fuel to be effected.

By the special request of the American Institute of Mining Engineers, the Professor communicated a paper on Pyrometry to the Mining and Metallurgical Congress held at Chicago in August last, and the paper has since been published in full.

The course of lectures to working men was delivered at Jermyn Street by the Professor, and was well attended. He also gave a series of four Cantor lectures at the Society of Arts, in which recent work in connexion with alloys was illustrated by means of experiments. These lectures have been published, and one of them will be useful as illustrating certain phases of Art Metal Work which are well represented in the collection of the South Kensington Museum.

By the direction of the Lords Commissioners of the Treasury, Prof. Roberts-Austen acted as Chairman of a Departmental Committee appointed to consider the arrangements of the Laboratories of the Inland Revenue and Customs Departments. The inquiry which occupied much time was concluded before the close of the year.

DIVISION VIII.—MINING.—PROFESSOR C. LE NEVE FOSTER, F.R.S.

During the past session 60 lectures and demonstrations on General Mining were delivered by the Professor, and six lectures on "Dressing," or the preparation of minerals for the market, by Mr. B. H. Brough; they were attended by 34 students.

Five lectures and demonstrations on First Aid to the Injured were given by Surgeon-Captain J. F. Forrester, Royal Horse Guards, in accordance with the regulations of the St. John Ambulance Association; 31 students attended, and 30 passed and received certificates.

The instruction in Mine Surveying commenced on the 15th February and was carried on during the greater part of the term by Mr. B. H. Brough. In the month of May he resigned his instructorship upon his appointment as secretary to the Iron and Steel Institute, and he was succeeded by Mr. J. G. Lawn, A.R.S.M. and De la Beche Medallist, who continued the instruction to the 19th June. The Professor takes this opportunity of placing upon

Appendix C.

ROYAL COLLEGE OF SCIENCE, LONDON.

record his appreciation of the great services rendered to the college by Mr. Brough, and his regret at losing so able an assistant.

Thirty lectures on Mine Surveying were given: and practical instruction in the use of instruments and in surveying was carried on at South Kensington, Hampstead Heath, and in the underground workings of a stone mine at Godstone. The students went to the mine in batches of seven at a time, and made surveys of different parts, which were connected together and plotted as a whole at South Kensington. Mr. L. H. Cooke gave useful assistance during the whole course.

Excursions.—The principal excursion was to North Wales, where the Morgan gold mine and an underground slate quarry at Festiniog were visited. There were also day excursions to Nutfield to see the fuller's earth workings, to Battle, where an instructive day was spent at the gypsum mine, and to Langley to see Priestman's dredger at work on shallow-lying deposits.

The mining students practised for a short time the use of the boring plant purchased last session, the manipulation of Professor Clowes' safety-lamp testing chamber and firing with electric fuses; and they also studied the construction of safety-lamps by taking them to pieces and fitting them together again. Many of the students spent their summer vacation in mining districts at home or abroad.

The teaching collection has been enriched by the addition of numerous minerals and appliances; many presented, some purchased. The more important are:—

Donations.	Donor.
Suite of copper ores—Lake Superior	James Douglas, Esq.
Series of joints for air and water pipes	Messrs. Eadie and Sons.
Glass-lined pipes	Messrs. Dan Rylands & Co.
Shaped drill steel	Crescent Steel Works, U.S.A.
Ten specimens of flattened strand steel rope	Messrs. Latch and Batchelor.
Three steel sleepers	Messrs. Howard of Bedford.
Miner's ladder and piece of steel rail	Halkyn Mining Co.
Bowl used in India for washing gold bearing alluvium.	J. Yates, Esq.
Two steel sleepers	C. Warren Roberts, Esq.
Model winch (turntree)	J. Lace, Esq.

PURCHASES.

Clowes' safety-lamp testing chamber, two steel frames for drifts, two bent steel supporting beams, four different haulage clips, Knox reamer, three pairs of self-oiling bearings for waggons, two batteries (high and low tension) for electric firing, series of boring bits, steel lining rings for shaft.

In addition to his course at the Royal College of Science the Professor gave six lectures to Working Men, at the Museum of Practical Geology, on "Ore and Stone Mining."

T. H. HUXLEY.

APPENDIX D.

Appendix D.
South Kensington Museum Returns.

South Kensington Museum.

Art Museum Returns including the Indian Section.

(1.) List of Contributors of Loans to the Art Museum, 1893.

Abney, Captain W. de W., C.B., R.E., F.R.S., D.C.L. A silver coffee urn.
Armstead, H. H., Esq., R.A. Designs for the new English coinage.
Armstrong, T., Esq. A Chinese inlaid tray.
Ashford, J., Esq. An iron casket.
Barton, A., Esq., M.D. A water-colour painting of a tiger by Ganku.
Batten, Mrs. F. E. Cary. A collection of arms and armour.
Biddulph, Lieut.-Gen. Sir R., G.C.M.G., C.B., R.A. A collection of ancient glass and jewellery from Cyprus.
Birch, C. B., Esq., A.R.A. Designs for the new English coinage.
Blandford, The Mayor and Corporation of. A marble bas-relief of Alfred Stevens.
Byrne, A. Esq. A collection of Zulu objects.
Canterbury Cathedral, The Dean and Chapter of. 52 ancient seal bags.
Carus-Wilson, Mrs. A. and Miss I. Petrie. A Chinese jade bowl.
Colchester, Lady. An Indian cabinet.
Crawford, The Earl of, K.T. Ancient book-covers and carved ivory panels.
Cumming, Mrs. J. A rosary formed of onyx beads.
Donaldson, G., Esq. A German clavicytherium.
Fitzhenry, J. H., Esq. Silver spoons and punch ladles, and various other works of art.
Ford, E. Onslow, Esq., A.R.A. Designs for the new English coinage.
Gurney, J., Esq. A steel knife and a pewter flagon and bowl.
Massey-Mainwaring, The Hon. W. F. B. A Dresden porcelain vase.
Middleton, J. H., Esq., Litt.D., D.C.L., M.A. Indian carved ivory plaques.
Middleton, Mrs. J. H. Specimens of lace.
Montagu, Sir S., Bart., M.P. A collection of specimens of silversmiths' work.
Montejo, Don U. A large Spanish clock made by Señor Zuloaga of Eibar.
Myers, Captain W. J. Oriental glass, earthenware, and metalwork; specimens of ancient pottery from Egypt.
Neale, G. C., Esq. A Chinese porcelain bowl, with silver-gilt mounts.
Nevill, Lady D. A wrought iron taper-holder.
Pearce, L., Esq. A Chinese glass vase.
Petrie, Miss I. and Mrs. A. Carus-Wilson. A Chinese jade bowl.
Pollen, J. H., Esq., M.A. Two suits of armour.
Poynter, E. J., Esq., R.A. Designs for the new English coinage.
Rathbone, F., Esq. An English inlaid cabinet.
Roberts, Gen. Lord, G.C.B., G.C.I.E., V.C. A collection of arms, armour, and horns.
Salting, G., Esq. Works of art from the Spitzer Collection; additions to his collection of Oriental porcelain, Limoges enamels, &c.
Sandford, Mrs. E. A model of a Kathiawar bullock cart.
Stapleton-Cotton, Col. the Hon. R. An emerald and diamond brooch.
Thornycroft, H., Esq., R.A. Designs for the new English coinage.
Wallis, H., Esq. Additions to his collection of ancient pottery, &c. from Egypt.
Westmacott, Mrs. R. A drawing by Flaxman and a water-colour painting by Gandy.
Works, H.M. Commissioners of. Water colour designs of mosaics for the Houses of Parliament by the late Albert Moore.

Appendix D.

SOUTH KENSINGTON MUSEUM RETURNS.

(2.) LIST of CONTRIBUTORS who WITHDREW their LOANS, wholly or in part, during the Year 1893.

Her Majesty the Queen.
Blandford, The Mayor and Corporation of.
Cayzer, C. W., Esq., M.P.
De Cosson, The Baron C.A., F.S.A.
De Montégut, The Baron H.
Dillon, F., Esq.
Donaldson, G., Esq.
Drake, Mrs.
Ford, E. Onslow, Esq., A.R.A.
Leyland, Capt. H. Naylor.
Marine Society, The.
Massey-Mainwaring, The Hon. W. F. B.
McKinnon, The late Mrs.
Newman, W. H., Esq.
Salting, G., Esq.
Stevens, The late Rev. R.
St. John, Lady.
Thornycroft, H., Esq., R.A.
Vere, Rev. L. D.
Wemyss, The Earl of.
Willett, H., Esq.
Wilshere, C. W., Esq.
Young, W. S., Esq.

(3.) LIST of DONATIONS and BEQUESTS to the ART MUSEUM during the year 1893.

	Reg. Nos.
AMERICAN SCHOOL OF CLASSICAL STUDIES, ATHENS. A plaster cast from a head of Hera.	1893. 3.
ANDERSON, THE LATE MISS E. Oil and water-colour paintings.	680 to 688.–1893.
ANTHONY, N. P., ESQ. A set of 50 Indian oleographs.	12.–1893 (I. S.).
BARON, MONSIEUR S. Spanish enamelled tiles.	1181, 1182.–1893.
BESHIKTASH, MONSIEUR C. A wooden cloth-measure.	712.–1893.
DAY, L. F., ESQ. A square of tapestry for a Chinese robe.	703.–1893.
DUSEIGNEUR, MONSIEUR R. A printed cotton cover.	173.–1893.
ECK, MISS B. L. A porcelain centre-piece and carved ivory basket.	710, 711.–1893.
HISTORICO-AMERICAN EXHIBITION, MADRID. A bronze medal in commemoration of the discovery of America.	539.–1893.
INDIA, THE SECRETARY OF STATE FOR. 14 books.	72.–1893 (I. S.).
LUCAS, J. SEYMOUR, ESQ., A.R.A., F.S.A. A felt hat of the time of James I.	752.–1893.
MARSHALL, C. H., ESQ. Two leather hats and a writing desk.	95 to 97.–1893.
MCMURDO, GEN. SIR W. M. S., G.C.B. Graeco-Buddhist sculptures.	66 to 70.–1893 (I. S.).
MIDDLETON, J. H., ESQ., Litt.D., D.C.L., M.A. Neapolitan and Oriental tiles and a plate from old Cairo.	1137 to 1143.–1893.
MORRIS, W., ESQ. Models of a tapestry and carpet loom.	156, 293.–1893.
MURRAY, C. F., ESQ. An enamelled terra-cotta bas-relief by Bastianini.	290.–1893.
OWEN, THE LATE SIR P. CUNLIFFE, K.C.B., K.C.M.G., C.I.E. A terra-cotta bust of the donor.	495.–1893.
PALMER-LOVELL, THE MISSES. A set of Delhi miniatures on ivory.	43 to 58.–1893 (I. S.).
PARVILLÉE FRÈRES ET CIE, MESSIEURS. A specimen illustrating the application of enamel to pottery.	1.–1893.
SANDFORD, MRS. ELLA. A panel of Multan tiles.	65.–1893 (I. S.).
SCOTLAND, THE BANK OF. A plaster ceiling from Crosby Hall Chambers.	1281.–1893.
SEALY, A. F., ESQ. A carved wood panel from Cochin.	71.–1893 (I. S.).

	Reg. Nos.
STEPHENS, MISS R. L.	
A specimen of lace.	1145.–1893.
WALDO-SIBTHORP, CAPTAIN C.	
A carved ivory figure for a Crucifix.	1144.–1893.
WALKER, DR.	
A fragment of a fresco from Pompeii.	503.–1893.
WHITEBROOKE, THE LATE MRS.	
A Paisley shawl.	672.–1893.
WILLETT, H., ESQ.	
A German enamelled stove.	578.–1893.

(4.) ABSTRACT of OBJECTS acquired for the ART COLLECTIONS (excluding Casts and Electrotypes) by purchase or Gift, during the year ended 31st December 1893.

Class.	——	Given.	Bought.	Cost. £	s.	d.
I.	Sculpture in marble, stone, &c.	10	1	19	10	0
II.	Mosaics in stone and glass	—	—	—		
III.	Carvings in ivory, bone, tortoiseshell, &c.	2	7	125	6	0
IV.	Woodwork, furniture, &c.	[illegible]	73	1,836	0	7
V.	Metal work	—	440	1,344	10	0
VI.	Coins and medals	1	53	20	0	0

APPENDIX E.

Appendix E.

REPORT BY DIRECTOR GENERAL.

ANNUAL REPORT of the GEOLOGICAL SURVEY and MUSEUM of PRACTICAL GEOLOGY for the Year ending December 31, 1893.

Geological Survey Office,
28, Jermyn Street, London, S.W.,
9th February 1894.

SIR,

I HAVE the honour to submit, for the information of the Lords of the Committee of Council on Education, my Report of the Geological Survey of the United Kingdom, and of the Museum of Practical Geology for the year 1893.

In accordance with the plan adopted in the Report for 1892 I shall first sketch the distribution of the field-work across the country and give information regarding the general progress of the maps, memoirs and other work of the Survey. Thereafter, under a separate heading, I will add some account of the more important results obtained by the operations of the Survey during the past year.

I. GEOLOGICAL SURVEY OF THE UNITED KINGDOM.

ENGLAND AND WALES.

A.—*General Statistics.*

Field work.

In the north and centre of England and the Isle of Man, which are under the personal supervision of Mr. Howell, Senior Director, three surveyors have been engaged. Mr. Tiddeman, in Yorkshire, has mapped an area of 56 square miles, including 234 miles of boundary, whereof 46 miles belong to the solid rocks underneath and 188 to the overlying drifts.

In Staffordshire, Derbyshire, and Cheshire Mr. De Rance has mapped an area of 118 square miles of superficial deposits and has drawn 310 miles of drift boundary. In the course of this survey he has approached the margin of the North Staffordshire coal-field. In consequence of representations made to my Lords during the past year orders have been given to re-survey this coal-field on the six-inch scale, and Mr. De Rance will proceed with this important work at once.

The survey of the Isle of Man has been continued by Mr. Lamplugh, who has completed the detailed examination of 20 additional square miles and has traced 363 miles of boundary lines, 108 miles being in the solid rocks and 255 in the superficial formations.

In the South of England the field-work, under the charge of Mr. Whitaker, has extended over the following counties :—Bedfordshire, Cambridgeshire, Huntingdonshire, Berkshire, Buckinghamshire, Wiltshire, Oxfordshire, Hampshire, Sussex, and Dorset. In Bedfordshire, Cambridgeshire, and Huntingdonshire, Mr. Cameron has surveyed an area of 183 square miles, including 410 miles of boundary, 17 of these being in the solid rocks and 393 in the drifts. Messrs. Bennett and Blake have completed an area of 123 square miles in the counties of Berkshire, Buckinghamshire, Wiltshire, and Oxfordshire, including 471 miles of boundary, of which 278 miles belong to the solid rocks and 193 to the overlying deposits. In the counties of Hampshire, Sussex, and Dorset, where the field work has been carried on by Messrs. Whitaker, Blake, Hawkins, and Reid, 211½ square miles have been mapped, with 768 miles of boundary lines, including 213½ miles among the solid rocks and 554½ miles among the drifts. Besides the ordinary field-work

Appendix E.

REPORT BY DIRECTOR GENERAL.

in the South of England, under Mr. Whitaker's supervision, a special study of the Cretaceous rocks of Dorsetshire has been made by Mr. Jukes-Browne, who during the past year has in this manner examined an area of 43 square miles in which he has traced 100 miles of drift boundaries and 60 miles of Cretaceous lines.

In Leicestershire, Mr. Fox-Strangways, continuing the field-work already described, has surveyed an area of 55¾ square miles, which include 382½ miles of boundary lines, 75¾ miles being among solid rocks and 306¾ among drifts.

The field-work in Devonshire has been pushed westwards across the Plymouth district into Cornwall by Mr. Ussher, who returns an area of 72¼ square miles as surveyed, comprising 437¾ miles of boundary lines, of which 153¼ belong to the solid rocks and 284½ to the drifts.

In accordance with the arrangement referred to in my last report, an additional surveyor, Mr. W. Gibson, has been placed in South Wales under Mr. Strahan, who reports that an area of 95½ square miles of the South Welsh Coal-field has been surveyed in the counties of Monmouthshire and Glamorganshire, including 520 miles of boundary lines, 294 of these being in the solid rocks, and 226 in the drifts.

The total area surveyed during the past year in England and Wales amounts to 935 square miles. The total number of miles of boundary line traced is 3,896¼, whereof 2,710¾ belong to the drifts, and 1,185½ to the solid rocks. The average ratio between the extent of area mapped and the number of miles of boundary line traced has been as 1 to nearly 4·2. Whilst this ratio remains almost the same as that for last year, it is satisfactory to be able to announce that, owing mainly to the long continuance of fine weather during the working season, the total area surveyed is nearly 200 square miles greater than that returned last year.

A few changes have occurred in this branch of the Survey during the year. The most important of these is the retirement of Mr. Edward Best on the 31st March, in accordance with recent regulations regarding the limits of age in the Civil Service. Mr. Best joined the staff in January, 1855, while Sir Henry De la Beche, the first Director-General, was still in office. He has thus served upwards of 38 years. For more than half of this long period he has been in general charge of the office, and has acted as secretary to my predecessor and myself. I desire to take this opportunity of recording my sense of Mr. Best's faithful service, and of the uniform courtesy and kindliness which marked all his relations to his colleagues.

This officer's retirement caused a vacancy in the staff, which has been filled up in the following manner:—Owing to the serious state of arrears in the petrographical work in the Jermyn Street Museum, arising from Dr. Hatch's resignation in the previous year, it became absolutely necessary to place a petrographer in charge of the collections without further delay. Accordingly in the month of April I transferred Mr. Watts, who was acting as petrographer on the Irish Staff, to the Jermyn Street Museum, leaving a vacancy in Ireland, which, as will be afterwards stated, was filled up in the following July. The retirement of Mr. Best, who was a Geologist, likewise gave rise to a vacancy in that grade, which was filled up by the promotion of Mr. Cameron. The new arrangements for the conduct of the work of this office are as follow:—Mr. Topley takes over the secretarial duties formerly discharged by Mr. Best, and has general supervision of the office. The general-assistant, Mr. Henry Gray, is placed in charge of the examination of maps after they are coloured, before being issued to the public. Most of the clerical work is undertaken by a Civil Service writer, Mr. P. M. O'Connor, who has been an efficient assistant in the establishment for four years past. By this re-arrangement of duties an additional surveyor (Mr. Gibson) has been obtained for the field-work without any increase to the total staff.

Maps published.

Nine new sheets on the one-inch scale have been issued during the year in two editions, one showing the superficial accumulations (Drift edition), the other representing the distribution of the various rocks beneath (Solid edition); viz.:—102 N.W. (Penrith and Vale of Eden); 102 S.W. (Shap, Appleby); 102 S.E. (Brough and part of Teesdale); 109 N.W. (Alnwick); likewise five sheets of the new Ordnance Map, in continuation of the Isle of Wight Sheet, and extending from beyond the western end of the Solent, along the coasts of Hampshire and Sussex to Eastbourne, Nos. 330 to 334.

Appendix E.

REPORT BY DIRECTOR GENERAL.

When the new Isle of Wight Sheet was issued in 1889, the re-survey of the mainland for Drift had not reached the portions of the Hampshire coast which were included in that sheet. But as these districts have now been re-surveyed, it has been possible to complete the Isle of Wight Sheet, and it has been issued in its completed form during the past year.

The original Ordnance one-inch maps of the centre and south of England, on which the work of the Geological Survey has been engraved and published, were in many cases engraved from inaccurate surveys, and their topography has become, over large parts of the country, so antiquated as to be of little use. They are now entirely superseded by the new series of one-inch Ordnance maps. The re-surveys for Drift and for coal-field purposes now being made by the Geological Survey are conducted upon the latest six-inch Ordnance sheets. It is found difficult, sometimes indeed impossible, to make a satisfactory reduction of the geological work from these field-maps to the old inaccurate and antiquated one-inch maps of the Survey. The expense of alteration of the old plates would be so serious, sometimes involving the entire cancelling of a plate and the preparation of a new one, that on the ground alike of efficiency and of cost it will be desirable and indeed necessary as the re-survey advances to cancel the old series and to adopt the new, as has been done by the Ordnance Survey.

In the progress of the Drift Survey of the southern counties considerable improvements have been made in the representation of the solid geology. Some of these have been inserted on Sheets 5 and 9, of which two new editions have been published: one showing the distribution of the drifts over the Chalk and Tertiary areas, and the other the alterations made in the Upper Cretaceous and Tertiary boundary lines.

Some revisions have been inserted on Sheet 84 (Lincolnshire). A new edition of Sheet 109 S.W. with Drift has been published, showing also some revision of the solid geology. Of the maps on the scale of six inches to a mile one sheet, viz., 15, Durham, has been published.

Although no sheet of the Index Map on the scale of four miles to an inch has been issued during the past year progress has been made with the reduction. The materials required to complete the map of the basin of the Thames have been furnished to the Royal Commission on Metropolitan Water Supply, and are about to be issued with the Report of that Commission, in anticipation of their publication as part of the Survey Index Map.

MS. coloured office copies of 6-inch maps.

Forty-nine MS. coloured copies of the following six-inch Maps have been made from the field-copies and have been deposited in the office for public reference, viz.:—

New Office Coloured Copies for 1893.

Cambridgeshire. 28 S.E., N.E.; 32 S.W., S.E.; 33 S.W., N.W., N.E.
Huntingdonshire. 19 S.E., N.E.; 22 S.W., S.E.; 23 S.W., N.W., N.E.
Cambridgeshire. 33 S.E.; 39 N.W., S.W., N.E., S.E.
Huntingdonshire, 16 N.W. and 16A, N.E. (parts of 33, 34, Northamptonshire).
Huntingdonshire. 17 S.E., N.W., S.W., N.E.; 18 S.E., N.W., S.W., N.E. 19 S.W., N.W.; 21 N.W., S.E., S.W., N.E.; 22 N.E., N.W.
Northumberland. 20, 21, 22, 40, 41, 43, 50, 52, 68, 76, 77, 84, 85.
Hampshire. 28, 47, 68, 80, 81, 88.
Sussex. 33.

The third volume of the general Memoir on the Jurassic Rocks of Britain, referred to in my last Report as being in type, has now been published. It contains a full description of "The Lias of England and Wales, Yorkshire excepted," by Mr. H. B. Woodward (pp. xii, 399, map and 89 illustrations; price 7*s.* 6*d.*). Volume IV., containing an account of the Lower Oolites, by the same author, is all in type and will be issued early this year.

Memoirs, &c. published.

A Memoir on "The Geology of South-Western Norfolk and of Northern Cambridgeshire," in explanation of Sheet 65, has been published; it has been written by Mr. W. Whitaker (acting as editor), Mr. S. B. J. Skertchly, and Mr. A. J. Jukes-Browne (pp. vii, 178, 38 illustrations; price 3*s.*).

Appendix E.

REPORT BY DIRECTOR GENERAL.

Petrographical Department.

A large number of Rock-specimens has been sent up from the field. These have been sliced and examined microscopically, and reports regarding them have been sent to the field-officers for their information. Mr. Teall has described in detail 361 slides, and supplied information for the guidance of the staff surveying in the Highlands. Besides his ordinary petrographical work, he has likewise taken part with several of his colleagues and myself in some important conferences on the ground regarding the structures of the banded gabbros of the Tertiary volcanic series of Skye, the Lewisian and Torridonian Rocks of Western Ross-shire, and the crystalline schists, quartzites, and limestones of Islay.

Mr. Watts took up his duties at the Jermyn Street Museum in April, and at once proceeded to attack the arrears in connection with the Rock Collection. He has general charge of the investigation of the eruptive rocks of Great Britain, and in that capacity receives specimens from the officers in the field, selects such as require microscopic determination, and furnishes reports regarding their composition and structure. He is engaged in the completion of a Guide to the Geological Survey Collections in the Dublin Museum on which he was at work before his transference, and he has also taken up the continuation of the Handbook to the Rock Collection in the Jermyn Street Museum.

A Committee of the British Association appointed for the purpose of exploring the nature of the sea-bottom around the British Isles, has kindly undertaken to present to the Jermyn Street Museum samples of the marine deposits met with in the course of its investigations. These specimens will be added to the interesting series already obtained from the surveying ships of the Admiralty through the kindness of the Hydrographer. A commencement has already been made by this Committee in its donations, a sample of a remarkable deposit of calcareous concretions found on the floor of the Irish Sea having been recently presented. Mr. Watts has carefully examined this sample microscopically and has furnished a report upon its characters which has been published in the 7th Annual Report of the Liverpool Marine Biological Committee.

Applications for information.

The applications for geological information made at the office during the past year have been more than usually frequent. Besides numerous requests for assistance in regard to well-sinking, coal-mining, sites for houses and buildings, and various other subjects, applications have been received from the War Department, the Office of Woods and Forests, the Local Government Board, and the Royal Commission on Metropolitan Water Supply. To this last-named body ever possible assistance has been rendered. In addition to what was mentioned in my Report for last year the Commission has been furnished with the geological maps and sections necessary for the illustration of its Report.

Among the other public bodies requesting assistance or information, reference may be made to Christ's Hospital (in regard to the new site for the School near Horsham), the County Council of Hertfordshire, and the Rural Sanitary Authority of Sleaford.

B.—*Record of Geological Work.*

Older Palæozoic.

While mapping the Drift and tracing the outcrop of the Rhætic Beds in the heart of England Mr. Fox-Strangways has had occasion to revise the mapping of the area of Charnwood Forest. In that district a group of ancient rocks has been long known to exist, regarding the nature and age of which considerable difference of opinion has been expressed. In re-mapping the ground with the advantage of maps on the scale of six inches to a mile Mr. Fox-Strangways has ascertained that the overlap of the old rocks by the New Red Marl is much more extensive than had been supposed, and that in fact more than half of the area hitherto represented as occupied by the old rocks is really covered by the younger formations. The field-work over that interesting area has now been completed, and a large series of specimens, collected from it, has been placed in the hands of Mr. Watts for determination. Perhaps the most important new facts noticed in the course of the survey have been obtained at Baddon Wood and Garendon, where the contact of the eruptive rocks with the

Appendix E.

REPORT BY DIRECTOR GENERAL.

surrounding altered strata has been observed. The re-survey of the ground has likewise shown, more clearly than was before known, the abrupt topography of the land that sank beneath the waters in which Keuper Marls were deposited. The old rocks hardly extend beyond where they are actually visible at the surface, and in many places where they descend steeply beneath the Marls, they must have risen as craggy or peaked islets out of the Triassic waters.

The so-called Skiddaw-Slates of the Isle of Man have occupied Mr. Lamplugh during most of the working season. He has found everywhere that they have been folded, faulted, and sheared; these proofs of intense mechanical movement being more particularly visible along the coast-section. The complicated structure thus produced has been well brought out by the mapping of the quartzites, which occupy certain areas in the south of the Island. The apparent great thickness and order of succession of the strata were found to be deceptive, the quartzites really forming comparatively thin sheets, but reduplicated by constant folding. In consequence of this complexity, no clear idea has yet been formed of the probable stratigraphical succession among the Skiddaw Slates of this region, though certain broad zones of slate have been followed into the interior, while other flaggy beds have been traced northwards to Peel, until they are faulted against the Peel Sandstone. An interesting feature among the Skiddaw Slates of this Island is the occurrence of certain coarse and fine breccias of slate-fragments, which are considered by Mr. Lamplugh to be friction-breccias, produced by the breaking up of the slates under shearing-strain at the junction between harder and softer strata. He has found some obscure organisms in the slates, but nothing as yet of definite palæontological value. Much time has necessarily been taken up in mapping the abundant dykes and veins of the Isle of Man to which reference was made in last year's Report. It has long been known that these rocks belong to two distinct geological periods, viz., Pre-carboniferous and Post-carboniferous. The latter Mr. Lamplugh has found abundant on the west coast in the cliffs below Port Erin and Glen Meay. They occur also on the east coast as far northwards as the mapping has extended; but they are rarely exposed at the surface in the interior, although met with in mining. The earlier dykes, of Pre-carboniferous age, occur almost everywhere in the Skiddaw Slate area. They have generally undergone much shearing; and although they cross the contortions of the sedimentary rocks, they are occasionally themselves contorted. They present great diversity of lithological character. Certain petrographical types among them will not improbably be found to form definite zones. Thus an interesting set of quartz-keratophyre dykes (containing white mica) is found on the west coast between Fleshwick Bay and Lag-ry-Keeley, while between Glen Meay and Peel the dykes are of a totally distinct character (diabase ?), and contain much dark mica. North of the Peel Sandstone area still another type of dykes and intrusions is to be seen. Numerous specimens of these various rocks have been collected and are now undergoing microscopical examination. On the west coast of the island, to the north of Peel, certain red sandstones occur, the exact geological age of which is still uncertain. Fossils have been known to occur in them, and Mr. Lamplugh has made an important collection of these organisms which consist chiefly of rolled corals, with some obscure gasteropods, brachiopods and polyzoa. The specimens obtained by him have been submitted to Messrs. Sharman and Newton, Palæontologists to the Survey, who find that though they are hardly specifically determinable, the corals seem to point to an Upper Silurian or Devonian origin.

Devonian.

In the progress of the survey of the Devonian rocks of South Devon the Plymouth area has been brought into connexion with those of Newton Abbot and Torquay, and the same sub-divisions have been found to hold good in it as have been established further to the east. Thus the presence of Upper Devonian rocks has been proved by the discovery of the characteristic *Entomides* near Tor Point, on the west or Cornish side of Plymouth Sound, in a series of slates which, developed on the north of the Plymouth Limestone, correspond in lithological character to the Entomis-slates of Torquay and Newton Abbot. The Igneous rocks, so abundant in the eastern part of the Devonian area, have been traced westwards to Plymouth Sound. Those in the Upper Devonian series seem to be, as at Newton Abbot, for the

most part intrusive. The Ashprington volcanic series has been traced continuously from the Totnes district, but in irregular and greatly diminished thickness.

Carboniferous.

The re-survey of the South Welsh Coalfield on the maps of the six-inch scale has made increased progress during the past year, as Mr. Strahan has been joined there by Mr. Gibson. Sheet 249, new series of the one-inch map, has been completed, and Sheets 232 and 263 have been begun. The area which has now been surveyed extends a little west of the Taff Valley, and includes the Caerphilly and Llancaiach basins, in both of which the Mynyddislwyn coal has been extensively worked. These basins are separated by an anticlinal ridge, which forms an important feature in the structure of the coalfield, from the fact that it brings the lower or steam coals up to within workable distance from the surface. Special attention, therefore, has been paid to tracing out the exact position of the anticlinal and synclinal areas. In the ground outside the limits of the Mynyddislwyn Vein (which was referred to last year as affording an excellent horizon) some impersistent coals of little commercial value have supplied the only indication of the structure of the ground. By tracing the crops of these seams, Mr. Strahan has ascertained approximately what part of the Pennant Rock forms the surface of the ground over most of the area. The importance of the information thus obtained, and the desirability of tracing the faults that cross the anticline, will be readily understood from the fact that the principal collieries are now, or must in the future be, situated on the line of axis.

Permian and Trias.

Mr. Fox-Strangways has continued the survey of the Triassic area of Leicestershire. The chief results of his work have already been noted when referring to the area of Charnwood Forest.

In Staffordshire, Derbyshire, and Cheshire, Mr. De Rance's drift survey has mostly lain over areas shown as Trias on the map of the solid geology, but largely covered by drift. Mr. De Rance has made a detailed examination of the sections that were exposed along the sides and in the bed of the Manchester Ship Canal, but which are now covered with water. The exposure of Triassic rocks there displayed seemed to prove that the Upper Mottled Sandstones are much thicker in that district than was originally estimated.

Mr. De Rance makes a special Report upon the results of borings which have been in progress for some years past in the Fleetwood and Presall district and near the southern margin of the Lancashire coalfield, and the northern margin of the Cheshire coalfield. The Fleetwood and Presall borings, made to explore the salt-deposits, have shown that sandstone precisely similar to the Garstang Sandstone underlies the Keuper Marl of that area. The Garstang Sandstones have hitherto been classed as Permian, but there can now be no doubt that they should be regarded as Triassic. This change brings the red rocks of Lancashire into harmony with those of Cumberland, where the St. Bees Sandstone, formerly classed with the Permian, is now regarded by the Survey as Trias.

The explorations along and beyond the southern border of the visible part of the Lancashire and Cheshire coalfields, are significant in another direction. They appear to prove that in both counties the Lower Mottled Sandstone, hitherto taken as the base of the Bunter, belongs to the Permian series; for above it, and below the Bunter Pebble Beds, lie marls with *Schizodus*.

Jurassic.

The only member of the staff engaged in mapping the Jurassic system in England last year was Mr. Cameron. While carrying on the Drift Survey in Huntingdonshire, and the adjacent counties, he has revised the lines of the Jurassic formations shown on the published map. In so doing, he has found Corallian fossils in some new localities in the great clay series of Huntingdonshire and Bedfordshire, but the sections where the organisms occur are so few that it has been found impossible to map the Corallian strata separately, and they have accordingly been left coloured as Oxford Clay.

Messrs. H. B. Woodward and A. Strahan made an examination and measurement of the Jurassic formations in the Dorsetshire cliffs, from near Swanage to near Weymouth, for the purpose of obtaining material for a detailed section. At the same time Mr. Strahan took upwards of 70 photographs of features of geological interest on that coast line, many of which are being prepared for exhibition in the Museum, each accompanied by an explanatory sketch. Others were taken with a view of being reproduced in a forthcoming

Memoir. The most important contribution made by the Survey during the year to Jurassic geology is the volume of the Jurassic Memoir by Mr. Woodward already referred to.

Cretaceous.

In confirmation of what was said in the last report regarding the advantage of tracing the sub-divisions of the Chalk, Mr. Hawkins reports that the Middle and Lower Chalk can be shown to occur in the Valley of the Meon in Hampshire nearly as far south as Meon Stoke and Droxford, where they were not previously supposed to be visible. Similar evidence of the value of tracing these sub-divisions has been obtained in Dorsetshire by Mr. Jukes-Browne in ascertaining the continuance of the Melbourne-rock and Chalk-rock through the county. The Lower and Middle Chalk are found to diminish in thickness towards the west; the former also thinning southwards down to 50 feet or less. A bed of smooth chalk appears between the Belemnite-Marl and the Melbourne-rock, and thickens in the same direction in which the Lower Chalk thins. The Chalk-rock of Dorset varies much lithologically. In one place (Winterbourne Abbas) two beds of hard brecciated rock were found to be separated by five or 6 feet of softer glauconitic chalk containing large grains of quartz. The brecciated material contains small fragments of fine-grained greensand, which, as Dr. Barrois has noted, correspond with varieties of Upper Greensand; indicating possibly that the Upper Greensand was undergoing erosion not far from this place during the formation of the Chalk-rock.

Along the southern strip of Sussex extending from Eastbourne westwards into Hampshire, the sub-divisions of the Chalk, which were traced during the Drift survey of that district, are now shown both on the old and new series of maps. A boring east of the Lincolnshire Chalk area near Willoughby proved that the Tealby Series there underlies the Glacial drift. It seems probable that a long tongue of Lower Cretaceous rocks runs north-west past Alford to South Thoresby, where these beds are exposed at the surface. This alteration with other minor corrections were made by Messrs. Jukes-Browne and Strahan, and have now been engraved on the map (Sheet 84). An account of this boring at Willoughby, with its bearing on the general structure of the district, has been published by Mr. Jukes-Browne. (Quart. Journ. Geol. Soc., Vol. 49, p. 467.)

Tertiary.

The progress of the mapping of the Eocene deposits in the western part of the London Basin has, during the past year, cleared up the true position of the Ramsdell Clay. It appears from Mr. Blake's field-work that two distinct beds of clay have been classed together, though one of these really belongs to the London Clay while the other forms part of the Bagshot Series. This observation is of some local importance, inasmuch as it removes the trace of what appeared to be an overlap or unconformability between the Bagshot Sand and the London Clay, the outcrop of the latter having been made too narrow at one place on the published map.

The mapping of the Eocene deposits of Hampshire has been carried on by Mr. Clement Reid westwards into Dorset. Several unexpected features have arisen in the course of the work regarding which it is hoped that some definite information may be given in my next Report.

Drift Survey.

The survey of the superficial deposits has made steady progress during the year, 2,711 miles of boundary lines having been traced. Few observations, however, have been made which seem to call for special mention in this report. Mr. De Rance has noted the character and position of nearly 500 boulders from 2 to 12 feet in length in east Cheshire, and has supplied information concerning them to the British Association Committee on Erratic Blocks.

In the prosecution of the re-survey of the South Wales coalfield the superficial deposits are mapped simultaneously with the solid geology, and during the past year Mr. Strahan has found that the drift increases in importance towards the west. In the form of mounds of gravel and gravelly clay, it overspreads much of the low ground and runs up all the main valleys. Many additional instances of glaciated rock-surfaces have been observed, showing a southward movement of the ice.

In the course of the survey of the Isle of Man, some interesting information regarding the Glacial deposits has been collected by Mr. Lamplugh. He has observed and recorded glacial striæ in some 60 localities, indicating a general movement of the ice along the main axis of the island, although on the lower ground towards the south-west, the movement appears to have

been more nearly in a north and south direction. The drift deposits of the western side of the island south of Kirk Michael are separable into two groups, one of which clings to the high land and consists entirely of local detritus, while the other covers lower ground, is largely made up of material foreign to the island and generally contains shell-fragments. These two groups seem to dovetail into each other. The drifts in the lower grounds, containing far-derived materials, are generally stratified, sometimes arranged in kame-like mounds and sometimes forming definite platforms. On the foreshore, at Kirk Michael, some fossiliferous sands lie near the base of the drifts. Striking examples of stream-erosion, hardly explicable under existing topographical conditions, have been observed by Mr. Lamplugh. These and the higher platform-gravels of the central valley of the island, probably date from the close of the Glacial period.

Petrographical work.

In addition to the ordinary petrographical work to which allusion has been made in the foregoing pages, the petrographers occasionally encounter problems which require for their solution a knowledge of the chemical composition of certain rocks. Mr. Teall during the past year has made four analyses of this nature in the laboratory of this institution, and two others have been made for us in the metallurgical laboratory of the Royal School of Mines, for which we are indebted to the courtesy of Professor Roberts-Austen.

The mineral Riebeckite is at present known to occur at so few localities that its recognition as a normal constituent of the granophyre of Meall Dearg near the head of Glen Sligachan, in Skye, seems to be of sufficient importance to deserve mention here, especially as fragments of riebeckite-bearing rocks occur not infrequently in the glacial deposits of our west coasts. The discovery of this mineral in the Skye locality was made by Mr. Teall in the course of his examination of a series of slides made from specimens collected there last year.

Extra-official publications by the staff.

The members of the Geological Survey, besides the researches which they may be able to carry on in their own time apart from their official duties, are led in the prosecution of these official duties to make many original observations which, though often of considerable scientific interest and importance can sometimes hardly be appropriately made known in the publications of the Survey, or must wait for some time until a convenient place can be found for their announcement in any official form. It is not desirable either in the interests of science or of the able investigators themselves that these observations should remain indefinitely unpublished. Hence it has been customary to allow the results of research by members of the Survey, after having been submitted to the Director-General, to be made known to the world in anticipation of any subsequent publication of them in an official form. In this manner much good work has been brought without delay before the general body of geologists, and the scientific reputation of the staff of the Geological Survey has been well sustained thereby.

During the past year some valuable communications have been made to the scientific journals by members of the Survey. Among those of the staff in England and Wales reference may be inserted here to the following papers:—Mr. Teall, in conjunction with Mr. Howard Fox of Falmouth, has continued the study of the Cornish rocks in two papers: "Notes on some coast-sections at the Lizard," *Quart. Journ. Geol. Soc.*, XLIX. (1893), pp. 199–210. Map and four cuts, and "On a Radiolarian Chert from Mullion Island," with notes on the Radiolaria by Dr. G. J. Hinde, *ibid*, pp. 211–220, map and plate. The following papers have likewise appeared:—Mr. A. C. G. Cameron, "The Geology, Mining and Economic uses of Fuller's Earth," *Trans. Fed. Inst. Mining Engineers*, VI., pp. 204–209. Mr. C. E. De Rance. "On the Results of the Salt Union Boring at Marston," *Trans. Manchester Geol. Soc.*, Vol. XXII., pp. 269–302. (The cores obtained in this boring have been presented to the Museum of Economic Geology.) Mr. A. J. Jukes-Browne, "The Relative Age of Flints," *Geol. Mag.*, 1893, pp. 315–317; "The amount of disseminated Silica " Chalk considered in relation to Flints," *ibid.*, pp. 541–546. Mr. C. Reid. "Desert or Steppe Conditions in Britain; a study in Newer Tertiary Geology," *Natural Science*, Vol. III., pp. 366–370; "On *Paradoxocarpus carinatus*, Nehring, an extinct fossil plant from the Cromer Forest-bed," *Trans. Norfolk and Norwich Nat. Soc.*, Vol. V., pp. 382–386; "A fossiliferous Pleistocene

Deposit at Stone on the Hampshire Coast," *Quart. Journ. Geol. Soc.*, XLIX. (1893), pp. 325–329. Perhaps to this list I may be allowed to add a paper "On the work of the Geological Survey" which I communicated to the Federated Institute of Mining Engineers and which appears in the fifth volume of their transactions. The various extra-official papers of the Scottish and Irish branches of the Survey and of the Palæontological Department are mentioned in later parts of this Report.

Scotland.

A.—*General Statistics.*

Mr. Howell reports that the total area surveyed in Scotland for the year 1893 amounts to 619 square miles, being an increase of 41 square miles over the area surveyed in the previous year. This increase would have been larger but for the illness of two members of the staff. The number of miles of boundary traced is 3720½. Thus, each square mile of area surveyed has required the mapping of six miles of boundaries.

In continuation of the general distribution of field-work announced in previous Reports, the staff has been engaged in three districts. 1st, the north-west Highlands, 2nd, the north-east Highlands, 3rd, the central and south-western Highlands, south of the Grampian chain.

(1.) In the north-western Highlands steady progress has been made by five members of the staff in pushing southwards the lines of complicated structure which have now been traced from the north-east of Sutherland to Loch Duich and Skye. Mr. B. N. Peach, who has general charge of this region, was, with Mr. J. Horne, stationed first at Applecross and afterwards at Strome Ferry, and the whole ground has now been cleared southward to Loch Keeshorn and beyond the mouth of Loch Carron. Mr. W. Gunn was engaged first at Poolewe, and during great part of the summer in the Gruinard district, which is now finished. Mr. C. T. Clough continued his work of last year in Sleat, Skye, while Mr. L. Hinxman connected his previous mapping from Loch Torridon with that in the valley of Loch Carron. The total area surveyed by this party amounts to 120¾ square miles, comprising 624¼ linear miles of boundary lines. Some of the members of the party were engaged in surveying in more southern parts of the country before the season for field-work in the north-west began, while at the close of that season they dispersed and in most cases resumed their work in the south before going into winter quarters.

(2.) The survey of the north-eastern Highlands has been prosecuted by five surveyors. It is under the general supervision of Mr. Horne, whose head-quarters are at Inverness. He, himself, before going to Ross-shire was engaged in mapping an area between the Beauly River and the Moniach. Mr. H. Miller surveyed ground in the east of Sutherland and the south of Caithness, embracing a tract of the eastern or younger schists with their granites and gneisses, likewise a portion of the Old Red Sandstone. To the east of Mr. Horne's own district, Mr. Hinxman has been employed during the whole working season, with the exception of three weeks spent by him in the Ross-shire ground already referred to, in surveying a wild mountainous tract of Aberdeenshire and Banffshire, including the highest summits of the Grampian Chain and the ground stretching northwards into Strathspey. He has completed the survey of Sheet 75, having mapped last year in this region 70 square miles. Further down the valley of the Spey, and thence eastwards into Aberdeenshire, Mr. J. S. Grant Wilson has completed Sheet 85, having surveyed during last year an area of 75 square miles with 221 miles of boundary. Mr. Greenly has likewise been engaged among the eastern schists in the eastern part of Sutherland.

(3.) In the wide region of the central and south-western Highlands extending from Kincardineshire to the south of Cantyre and the western shores of Islay seven officers have been engaged. At the north-east end of the chain of stations Mr. Barrow in the counties of Kincardine and Forfar has mapped 55 square miles, including 238 miles of boundary lines. South-westward of his district the ground has all been cleared up to the south-west of Perthshire,

where, and in the adjoining county of Stirling, Mr. Dakyns has surveyed 32¼ square miles with 186 miles of boundary lines. In eastern Argyllshire Mr. Clough, besides his work in Skye, already noticed, has completed 22 square miles, involving no fewer than 263 miles of boundaries or nearly twelve miles in every square mile examined. In the Dalmally district of the same county Mr. Hill has mapped an area of 36 square miles, comprising 402 miles of boundaries. In Cantyre Mr. Syme's reported area amounts to 50½ square miles with 186¼ miles of boundaries. Still further west Mr. Wilkinson, who has been at work in the island of Islay has completed 55¼ square miles comprising 346 miles of boundaries. Mr. Gunn in addition to his field-work in the north-west already referred to has for some years been able to add a little to the area surveyed in the basin of the Clyde by mapping there before and after the working season in Ross-shire. Last year he thus mapped 14½ square miles in the south of the island of Arran, which included the tracing of 152 miles of boundary lines.

Palæontological work.

A considerable addition to the Survey Collection of organic remains has been made during the past year, the total number of specimens obtained amounting to 1,964. Of these 1,092 were collected by Mr. Bennie from the Glacial deposits of the counties of Argyll, Edinburgh and Inverness, while by Mr. Macconochie 172 have been collected from the Cambrian series of Ross-shire, and nearly 100 from the Caradoc formation of Ayrshire.

The determination of the fossils has been made as hitherto by Mr. Peach, who, in addition to his other duties, acts as palæontologist during the time when he is in Edinburgh. In the early part of the year he completed the naming of the large collection of fossils made by the Survey from the Durness Limestone, selecting from them such as seemed suitable for exhibition in the Museum, where they are now displayed. He also determined the fossils collected from the Lower Silurian rocks of Girvan, Sanquhar, and the border of the Southern Uplands, hitherto unnamed, besides re-examining nearly all the Silurian specimens in the Museum. Since his return from field-work in November he has named a collection of Lower Silurian fossils from near Craighead, Ayrshire. He has likewise begun the investigation of a fresh collection of specimens from the *Olenellus*-zone at another locality in Ross-shire, and has made drawings of several new trilobites which he has detected among them.

Petrographical work.

The number of rock specimens collected during the past year amounts to 399. They have been obtained from the counties of Ayr, Forfar, Kincardine, Perth and Ross, and illustrate the crystalline schists of the central Highlands, the Lower Cambrian rocks of the North-west, the Lower Silurian rocks of Ayrshire and the Old Red Sandstone of Forfar and Ross-shire. All these specimens have been collected by Mr. A. Macconochie.

The preparation of microscopic slides of rocks continues to be carried on at the Edinburgh Office, not only for the use of the Survey in Scotland but likewise for England, Wales, and Ireland. During the past year 833 slides have in this manner been prepared and distributed. The determination of the rocks of Scotland belonging to the series of crystalline schists is conducted at the Jermyn Street office by Mr. Teall who, during the past year has examined 361 microscopic slides and has furnished detailed reports upon them to the officers in the field.

Photographic work.

The use of photography continues to be of much service in the progress of the Survey, especially for the preparation of illustrations to the Memoirs and for the elucidation of the rock-specimens in the museums. During the past year Mr. Robert Lunn has taken 110 photographic views of geological sections. These include a large and valuable series illustrative of the volcanic rocks of Fifeshire in the basin of the Firth of Forth, in continuation of the series already taken in the Lothians. He also obtained an instructive series among the basic volcanic rocks of Skye, for purposes of comparison with the structure of the Lewisian gneiss on the mainland.

Museum work.

Mr. Goodchild, Curator of the Geological Survey Collections in the Edinburgh Museum of Science and Art, reports that during the past year the remounting of the fossils has been almost completed, and that during the past few months he has been engaged with an assistant in revising the arrangement and nomenclature of the rock specimens, so as to keep the collection up to date. The public interest in this collection continues to increase, and many

students make use of the collection, more especially on Friday and Saturday evenings.

Maps published and engraving.

One sheet of the one-inch Map, No. 91, has been issued during the year. It contains the mountainous tract of Ross-shire, from the mouth of Lochewe to the hills between Gairloch and Loch Torridon. Six other sheets are now being engraved, viz.:—No. 12, southern portion of Cantyre. No. 46, Western Perthshire. No. 55, Central Perthshire, Glengarry to Dunkeld. No. 56, Perthshire and Forfar, Dunkeld to Cortachy. No. 75, Aberdeenshire and Banffshire, Cabrach, Tomintoul, and Ben Avon. No. 115, Northern Sutherland and North-western Caithness, Bettyhill to near Thurso. Two sheets, Nos. 66 and 96 are engraved, but their publication is delayed until the completion of some surrounding work.

For several years past, after the working season in the Highlands has come to an end, or before it has begun, Mr. Grant Wilson has been employed in revising the published maps of the county of Fife, with the view of preparing a new edition of the Coal-field Maps of that important district. Thus, in the early spring of the past year, and again in November and December, he was engaged in this work of revision, more particularly upon the following six-inch Sheets, Nos. 24, 25, 31, 32, 33, 35, 36, and 37, embraced within Sheet 40 of the one-inch Map, of which a new edition is now in preparation.

B.—*Record of Geological Work.*

With the exception of a few detached areas which have required further examination, the Lewisian Gneiss, as reported last year, has been continuously mapped throughout its whole extent, on the mainland, from Cape Wrath to the Kyles of Skye. So numerous and complicated, however, are the problems presented by this rock, that we have found it necessary to re-examine various tracts in the light of experience gained from other districts. In this manner Mr. Gunn, before beginning his new work last year, in the west of Ross-shire, spent more than a week in studying anew the Loch Maree limestones and schists at their northern end near Ardlair, where much information is afforded regarding the complicated structure of this area by the revelation of a series of sharp and sometimes inverted synclines. The remarkable mass of hornblende-schist, which here forms so picturesque a feature in the scenery, appears to be a later intrusion than the dykes in the gneiss, and Mr. Gunn is inclined to believe that the mica-schist and limestone are likewise younger than the gneiss. In the Gruinard district he has observed a remarkable band of hornblende-schist, quartz-schist, quartz-rocks and fine-grained micaceous gneiss, evidently anterior to the intrusion of the ordinary epidiorite dykes. This band, 200 to 300 yards wide, has been traced by him for about 6 miles. At both ends it passes under the Torridon Sandstone. Mr. Gunn has remarked that both the hornblende-schist and fine-grained gneiss are penetrated by abundant quartz-veins, which coalescing in places seem to form the quartz-rock and quartz-schist. As these rocks are cut by the ordinary massive epidiorite dykes there can be no doubt as to their relative age, but as the epidiorites have been locally transformed into hornblende-schist, the older rocks have obviously been subjected twice to intense mechanical movement.

Lewisian Gneiss.

Carrying on the mapping in the Loch Carron district Mr. Horne has found that at North Strome, where a large mass of Lewisian gneiss has been thrust westwards, there occurs a thick body of hornblende-schist, bearing a close resemblance to that above referred to as displayed at the north side of Loch Maree. This rock is here associated with thin zones of garnetiferous mica-schist, flaggy mica-schist, and fine siliceous-schist, and though no band of limestone has yet been noted here, these rocks may not improbably prove to be continuations of the Loch Maree and Letterewe series.

Torridonian.

Further detailed mapping has now been carried by Messrs. Peach and Horne across the remaining portion of the undisturbed area of Torridonian rocks on the mainland of Scotland. As these rocks have been traced southwards they have been found to assume more imposing dimensions and to present a succession of sub-divisions which are not distinctly recognisable in the northern part of the region. The following table gives in descending

order the series of strata which, as shown by the mapping, make up the Torridonian system of the north-west of Scotland :—

Names of Groups.	Approximate thickness in feet.	Nature of Materials.	Where typically exhibited.
4. Cailleach Head Group.	1,000 to 1,500	Sandstones, flags, dark and black shales and calcareous bands.	Cailleach Head, Loch Broom.
3. Aultbea Group	2,000 to 3,000	Chocolate-coloured and red sandstones, chocolate-coloured and grey micaceous flags, with partings of grey, green and dark shale.	Point of Coigach; Aultbea, Applecross.
2. Applecross Group	4,000 to 5,000	Coarse arkose with pebbles of quartzite, quartz-schist, felsite, jaspar, gneiss, &c.	Durness; Assynt; Stoer; Coigach; Ullapool; Dundonnell; Torridon; Applecross.
1. Diabeg Group -	500 and upwards	Hard red sandstones and grits; grey greywackes, red mudstones, dark grey and black shales, limestone and calcareous bands.	Stoer; Dundonnell; Gairloch; Loch Maree; Diabeg and Loch Torridon.

The highest of these groups has only been detected on the Cailleach Head between the two Lochs Broom. It is the massive red arkose and sandstone (Groups 2 and 3) which attain the widest extension and the greatest thickness, and which are usually taken as the type of the Torridonian or Torridon Sandstone of the north-west Highlands. A new feature in the recent work of the Survey is the great development of the lowest members of the Torridonian series as they are followed south-westwards and the prominence assumed by the shales which occur among them. In the Gairloch district this group is estimated to attain a thickness of about 500 ft., but when it is traced into Skye it reaches still greater dimensions, and is there capable of sub-division into minor groups. For convenience of mapping, and to show the stratigraphical variations in this interesting and still little known system of pre-Cambrian sediments, Mr. Clough has separated the lowest or Diabeg group into the following sub-groups in descending order, as exhibited in Sleat, Skye :—

d.—Kinloch Beds, a series of dark grey sandy shales and fine-grained grey and buff grits with thin calcareous bands and lenticles.
c.—Ben a Seamraig grits, fine-grained buff or grey-green grits with some bands of grey sandy shale.
b.—Dark grey gritty or sandy shales, with fine-grained buff grits and thin impure limestone bands and lenticles.
a.—Epidotic grits or arkose with abundant pebbles of epidotized felspar, the finer bands showing a greenish matrix; occasional thin bands of purplish green shale occur. On the mainland a conglomeratic band at the base rests on the old gneiss.

If there is no re-duplication of the strata by folding, the total thickness of these four sub-groups must be between 5,000 and 6,000 ft. But even when every allowance is made, 1st, for a large southward development of the Diabeg group; and 2nd, for the possible appearance of still lower members of the Torridonian system not seen further north it is not likely that the increase of thickness can be so great as the observed inclination of the strata might lead us to believe. More probably repetitions by plication occur which have as yet escaped detection.

The occurrence of shaly bands in the lower parts of this vast accumulation of sediment affords some hope that recognisable organic remains may yet be met with among them. Mr. Clough has observed that his sub-group *c* contains bands of arkose like those of group 2, but with pebbles of white felspar as often as red, and with abundant oligoclase, but that its most interesting intercalations are certain black bands, varying up to five inches in thickness, which on examination prove to consist of magnetite with zircon and epidote. He notes also the resemblance in outward respect of some finely-banded portions of his sub-group *b* to the finely-striped parts of the Dunoon phyllites

Appendix E.

Report by Director General.

of Argyllshire, and his greenish epidotic grits at the base of the whole have greatly reminded him of the "Green Beds" of Dunoon.

Reference was made in my last Report to the work of Messrs. Peach and Horne among the disturbed masses of Lewisian gneiss and Torridon sandstone in the district of Loch Carron, and to the highly important observation of granulitic flagstones, like the so-called "Moine-schists," which appeared to have been produced by the alteration of Torridon Sandstone. The mapping of 1893 has fully confirmed this observation. Recognising the value of any evidence that will tend to elucidate the history of the younger or eastern schists, I asked Mr. Teall to accompany me in an inspection of Mr. Peach's latest mapping in the Loch Carron district. There can, I think, be now no doubt that several folds of the lowest group of the Torridonian series are involved in masses of crushed and modified gneiss to the east of the outcrop of the great or "Moine" thrust. These folds show the basal conglomerate and the characteristic overlying shaly and flaggy strata. As they are traversed towards the interior they display an increase of metamorphism, and show the ordinary characters of typical "Moine-schist." There is thus every reason to anticipate that the Torridonian series has largely contributed to the formation of the eastern or younger schists.

Cambrian.

The discovery, by the Survey, of well-marked fossils in the shaly group overlying the quartzites of the north-west Highlands, has furnished positive palæontological data for assigning these strata to the oldest part of the Cambrian system. Owing to the dislocated condition of the rocks of that region it is only here and there that the shales have so far escaped disturbance as to afford the prospect of yielding organic remains. The original locality in the Dundonnell Forest in Western Ross-shire has been subjected to a renewed careful scrutiny and a few more fossils have been obtained there. Another exposure of the same strata, which was observed when the ground in the valley of Loch Maree was being mapped, seemed to promise success to a diligent search for fossils. It lies on the northern slopes of the hill called Meal Gubhais on the west side of the lake, where the "Fucoid beds" are well exposed. Before beginning their field-work in the North-west this summer, Messrs Horne Gunn and Clough visited this locality, and identified the position of the *Olenellus*-zone. Mr. Horne obtained a well-preserved specimen of *Acrothele cadusia*—a lower Cambrian brachiopod, together with fragments of *Olenellus*. The collector, Mr. A. Macconochie, was subsequently directed to search the zone at this place, and he obtained a large series of specimens which will considerably increase our knowledge of the oldest Cambrian fauna in this country. The fossils are now under examination by Mr. Peach.

Eastern or younger schists.

In the north of Scotland large additional areas of the schists have been mapped to the east of the line of complicated dislocations which runs from the north coast of Sutherland to Skye. In the east of Sutherland, Mr. Greenly has traced certain quartz-schists which may be regarded as probably altered sediments. A similar origin appears to be assignable to the mica-schists, which are interbanded with the quartz-schist, and spread out into a large series further north. The schists are in places permeated with granitic material so as to become gneisses. Mr. Miller in the area assigned to him in the parishes of Rogart and Clyne has been engaged in the study of the problems presented by the granitization of the schists. He is disposed to believe that the granitic substance has been introduced into the schists and quartzites in such a manner as to take first the form of a fine mottling of granitic particles, and then in further stages of metamorphism to make its way chiefly along the schistose folia, increasing here and there into knots and strings which may often be observed in the bands of contortions, and still farther augmenting into bands and sills until the original rock is wholly displaced, or occurs only in inclusions in the granitic material. In the gneiss-like rock thus arising there is no sign of crushing, but the finer and coarser banding observable in it at once recall the banded structures of the eastern schists. Mr. Miller looks upon such granitized masses as "replacement structures," or, as it were, pseudomorphs of the pre-existing rocks.

While mapping the tract of hilly ground on the county boundary between Banffshire and Aberdeenshire, Mr. Grant Wilson has found that several square miles of the quartzite that caps the Black Hill is a strong pebbly conglomerate —an additional evidence of the truly sedimentary origin of the oldest rocks in

that part of Scotland. Mr. Hinxman, who has now joined up lines with Mr. Wilson, has likewise obtained abundant evidence of the original clastic character of the schists in the northern sides of the Grampian chain. The siliceous schists and granulitic gneisses that stretch westwards from Strath Avon and northwards from the foot of the Cairngorm Mountains to the Spey have obviously been at first sandstones and shales which have assumed their present condition under the influence of dynamical and thermal metamorphism. By mapping out their structure Mr. Hinxman has ascertained that the steady north-westerly dip which they present at comparatively low angles is produced by a complex system of isoclinal folds. But in addition to the general regional metamorphism further complication has arisen from the alteration produced by the vast masses of intrusive granite that form so conspicuous a feature of the Grampian chain. A belt or aureole of contact-metamorphism flanks the northern edge of the granite. It is well seen along the course of the Avon for some distance above Inchrory Lodge. Those members of the sedimentary series which were originally most argillaceous and felspathic have been altered into cordierite-gneiss which passes outwards into flaggy biotite-gneiss and mica-schist, while the more siliceous bands, though perhaps as profoundly modified, show from their simpler composition less change among their component ingredients.

On the southern side of the Grampian chain the field-work becomes increasingly interesting and important. We seem to be now on the eve of discoveries which will give us ultimately the clue to the sequence and geological age of the rocks which constitute the central and southern Highlands. In the Island of Islay, where Mr. Wilkinson has recently been at work, a series of rocks occurs which in many respects recalls the succession in the north-west Highlands. At the top of this series lie some dolomite and dolomitic shales, which so closely resemble the so-called "Fucoid-Beds" of Sutherland and Ross that a geologist familiar with the latter at once begins to search them for worm tracks, and in such search, he is soon successful. Beneath these strata lies a mass of quartzite which in lithological character may be paralleled with portions of the quartzite of the North-west, though up to the present time it has not been found possible to recognise the sub-divisions so characteristic of the northern area. A characteristic feature of the bottom of this quartzite is a coarse conglomerate or boulder-bed like that which underlies the quartzite of central Perthshire. The thick bands of limestone which have been so long known in Islay are so little altered that their original oolitic structure is perfectly preserved, and there seems to be no reason why fossils should not eventually be found in them. In the south-west of the Island certain gneissose rocks were some years ago vaguely identified by Mr. J. Thompson with the old gneiss of the North-west, and certain reddish grits and arkoses were regarded by him as equivalents of the Torridon Sandstone. The general relations of the rocks in the Island, however, have been much obscured by complicated folding and dislocation. In the autumn I spent ten days there with Mr. Peach, Mr. Horne, Mr. Teall and Mr. Wilkinson examining the typical sections and concerting measures for the detailed prosecution of the survey this year. The quartzites of Islay and Jura have generally been regarded as a continuation of those of the Central Highlands. If evidence can be found of a palæontological character to fix their geological horizon in these islands an important step will have been made towards ascertaining the age of the rocks of the whole Highland region to the east and south of the Great Glen.

Not less important in its bearing upon the origin and sequence of the Highland rocks is the recent work of Mr. J. B. Hill in the district of Loch Awe, to which reference was made last year. In the course of a recent tour of inspection I took occasion to visit Mr. Hill on his ground, and to examine with him the evidence which he has adduced as to the cessation, or at least the remarkable diminution, of metamorphism, as the rocks are followed from the north-east into the basin of Loch Awe. I was completely satisfied that he has established this statement. I found that in passing westwards we gradually recede from thoroughly schistose rocks and reach a group of shales and phyllites with bands of limestone hardly more altered than portions of the Silurian series of the south of Scotland. As might be expected, however, the diminution in metamorphism, though generally progressive, is not uniform, some

zones, owing doubtless to their chemical composition, having been less affected than others above and below them. Followed in a north-easterly direction these phyllites and limestones become, according to Mr. Hill, the calc-sericite-schists which have been mapped continuously through the heart of the Highlands. The uppermost rocks in the Loch Awe basin, containing well-marked bands of limestone as well as shales, so little altered that they may not improbably yield fossils, are regarded by Mr. Hill as a continuation of the uppermost or Blair Athol Limestones of the central Highlands. In this district also, as in the Northern Grampians, the problems of regional metamorphism are complicated by the effects of the protrusion of large bodies of granite. Some of these masses reach the surface, as in Ben Cruachan, but there is probably a vast amount of granite underneath which makes no show at the surface at all.

It has long been known that the rocks which form the southern border of the Highlands, immediately beyond the great fault, are much less metamorphosed than those which lie further to the north. So little altered are they, indeed, that they have been spoken of with more or less confidence as Palæozoic sediments and have even sometimes been identified with a portion of the Silurian series of the south of Scotland. The Survey had mapped many miles of these border rocks without obtaining any clue to their probable age. During the past year, however, some important evidence has been discovered by Mr. Dakyns and Mr. Barrow, with the assistance of Mr. Peach and Mr. Horne. The two former members of the Staff detected among the rocks of the Highland border the occurrence of certain graphitic schists frequently associated with black, grey and red chert and various dull green rocks of igneous origin. Mr. Horne, who was familiar with the Lower Silurian series in the Southern Uplands, was directed to visit Mr. Barrow and to give him the benefit of that experience, and he was able to show a very close parallelism between the lithological characters and general sequence of the rocks in the two regions. The cherts of the southern counties contain *Radiolaria* and when specimens of the Highland cherts were sent to Mr. Peach he at once detected *Radiolaria* in them. The association of a zone of green basic eruptive rocks with the graphitic schist and red and black radiolaria-bearing cherts, so exactly a counterpart of the Arenig succession in the south of Scotland, affords a strong presumption that Lower Silurian rocks are included along the Higbland Border.

In the district extending from the pass of Leny by the Trossachs and Aberfoyle to Loch Lomond, Mr. Dakyns finds that the zone of black shales and cherts occurs with bands of greywacke, red-mudstone and hornblende-schist. These strata along their northern margin are apparently (but perhaps deceptively) overlain by a group of massive greywackes, sometimes pebbly, with occasional bands of purple slate. This group in turn passes northward into a thick series of blue and purple slates (Aberfoyle and Luss) with bands of pebbly grit. These, again, are flanked on the north by a band of flags, sandy slates and massive pebbly grits which followed still further to the north merge into the mica-schists of the Central Highlands in so gradual a manner that no satisfactory boundary-line can be drawn between them.

In Forfarshire and Kincardineshire Mr. Barrow has traced for 25 miles at the edge of the Highland border a narrow belt of rocks which he divides into two groups: (*a*) Radiolarian cherts and jaspers associated with a complex mass of more or less cleaved igneous rock, and (*b*) pale grits cemented with carbonate of iron, containing lenticular patches of limestones and associated with black shales. Mr. Barrow believes that the northern limit of this narrow belt is defined by a line of thrust which separates it from the Highland schists.

The southern portion of Cantyre (Sheet 12 of the one-inch map) has now been completely surveyed by Mr. Symes assisted in some parts by Mr. Peach. In that extreme south-western prolongation of the crystalline schists of the Highlands, the Loch Tay Limestone is well develoqed. Even as far as the western coast-line between Machrihanish Bay and the Lighthouse at the Mull of Cantyre, Mr. Peach has found three folds of this limestone, associated with pebbly quartzose mica-schist, green chloritic schist and schistose greywacke. The distance between this coast and the opposite shores of Ireland where limestones occur among the schists is not more than 15 miles and there seems to be a strong probability that the Antrim limestone of Torr Head is a prolongation of the Loch Tay horizon. Unfortunately even if this identification is estab-

lished the Antrim area of crystalline schists is entirely separated from the rest of these rocks in the north of Ireland by the great basalt-plateau, so that the sequence cannot be continuously followed into Londonderry and Donegal.

Palæozoic and younger igneous rocks.

The southern portion of Cantyre displays a remarkable development of intrusive igneous rocks. The oldest series consists of sills and masses of epidiorite which have been injected into the schists before their disturbance and metamorphism, for the intrusive rocks have been folded and foliated together with the schists in which they lie. This complex series of altered sedimentary and igneous rocks has been pierced by innumerable dykes of olivine-basalt and andesite, like those associated with the Carboniferous lavas further north. Lastly, all the preceding rocks are traversed by many dykes belonging to the series which is now generally accepted as probably of Tertiary age.

The Survey of the southern half of the island of Arran has been continued by Mr. Gunn, who finds the intrusive sheets there, both acid and basic, to be remarkably abundant, involving the tracing of a large number of boundary-lines. No conclusive evidence has yet been obtained regarding the age of these rocks, nor of that of the soft red sandstones and shales which underlie and are traversed by them. The southern shores of Arran, as is well known, are cut by a profusion of basalt-dykes. Though these can be found exposed here and there in stream-sections, it is seldom possible to follow them far inland.

Jurassic (with Tertiary volcanic rocks).

Mr. Woodward continued and practically completed the survey of the Jurassic Rocks of Raasay, together with the Tertiary igneous rocks associated with them. A detailed section of the Lias and Oolites from the red strata below the base of the Lias up into the Great Oolite series has now been obtained, and will be of much assistance in surveying the opposite coast of Skye which will be attacked this year. After finishing my inspection of his his work in Raasay I went over with Mr. Woodward to Skye, in order to map a small portion of that island which comes into the south-west corner of Sheet 91, one-inch scale, and thus allow this sheet, which was otherwise finished, to be published in 1893. We found the Great Oolite series to form the lower part of the line of mural coast-cliffs, surmounted by sills of dolerite, and with other intrusive sheets of a similar character intercalated among the sedimentary strata. These sills are sometimes strikingly prismatic in their jointing, as in the well-known Kilt Rock, and the resemblance which they thus present to some of the columnar basalts of the great plateau, together with their apparently regular bedding may have led Edward Forbes to the belief that they were truly contemporaneous with the deposition of the Oolitic formations. But their really intrusive nature can be conclusively demonstrated. One of the most interesting features of this portion of Skye is the singular persistence of the zone of dolerite-sills in the Jurassic strata underlying the basalt plateau. It runs for more than 20 miles along the coast generally crowning the cliffs, but sometimes descending to their base. It forms also a succession of crags and hollows across the rough strip of ground between the edge of the cliffs and the bottom of the great basalt-escarpment, when that feature retires inland.

The Tertiary gabbros of Skye show some remarkable structures which have long seemed to me to deserve detailed study in regard to their possible bearing on the structure and origin of the more ancient gneisses of the north-west of Scotland. As the work of the Survey has now extended into Skye, I took occasion to re-visit these gabbros accompanied by Messrs. Peach, Horne, and Teall. We made a careful study of the rocks, brought away specimens for microscopic study, and had a series of photographs of the more characteristic structures taken by Mr. R. Lunn on the ground, for comparison with those already made by him of the gneiss of the mainland. The phenomena of banding, segregation of minerals in special layers, wavy lamination and folding are displayed by these Tertiary igneous rocks in a manner that presents a very close parallel to the internal arrangements of many parts of the Lewisian gneiss.

Drift and Glaciation.

During the progress of the recent field-work in Applecross some interesting additional evidence has been obtained regarding the successive movements of the ice-sheets of that district. Mr. Horne, in mapping the southern and loftier part of the ground, has found further proofs, that, during the greatest development of the ice, boulders of various types of crushed Lewisian rocks

Appendix E.

REPORT BY DIRECTOR GENERAL.

have been carried to the north-west, and have been left on the crests of the cols of the Ben-y-Van range, which reaches a height of 2,936 feet above the sea. He has ascertained that, in some instances, such boulders have been carried backwards by later glaciers moving in an opposite direction. In the northern part of the district, where the ground rises to more than 2,000 feet, Mr. Peach has found that the rocks are ice-worn from the sea-level up to the highest summits, the general direction of the striation being, as mentioned last year, from S.S.E. to N.N.W., and that the ice passed outwards over the Croulin Isles, which are well glaciated in the same direction. He has further observed that as the Torridon sandstone sinks northwards, it passes under boulder-clay, which is arranged in drumlins, with their larger axes parallel to the general trend of the striæ. Still further north the drumlins, which belong to the time of greatest glaciation, are truncated obliquely by rampart-like mounds ranged in a W.N.W. and E.S.E. direction. These are the moraines of a large valley-glacier which, to judge from the arrangement of the moraine-mounds and the direction of the ice-striæ on the rocks, flowed out of the hollow of Loch Torridon during a later time of glaciation.

Striking moraines of the later glaciers are to be seen on the west side of the great ridge, which is crossed at a height of 2,054 feet by the road from Loch Keeshorn to Applecross. Even the hills on the north side of the Applecross valley, which are less elevated, nourished small glaciers, as is shown by the terminal moraines mapped by Mr. Peach in three of the corries of Ben-a-Chlachain, while the valley itself seems to have been filled by a glacier which, chiefly fed from the snow-fields to the south, threw down its moraines as far as Applecross Church on the edge of the 100 feet raised beach.

In the lofty and rugged region lying to the north of Strathcarron, Mr. Hinxman has met with impressive evidence of intense glaciation. The track of the great ice-sheet in a general north-westerly direction, is marked by striæ which can be traced over the highest crests at a height of 3,000 feet above the sea, and also by boulders of rocks which occur *in situ* in the interior further to the east and south-east. The quartzite-summits retain their ice-worn character still so fresh that their polished surfaces, plunging steeply down the mountain-sides, can hardly be walked upon. When wet, these glistening sheets of rock shine like polished marble, and show the fine striation impressed on them by the ice-sheet. Each larger valley among these mountains has its lateral and terminal moraines marking the positions of the later glaciers.

Raised beaches.

The raised beaches at levels of 50 and 100 feet form marked features at the mouth of Loch Carron, and in other sheltered inlets of the west of Ross-shire. From Applecross Bay, where the old coast-lines are well developed they continue northward with hardly any interruption for about ten miles. In some places they take the form of notches or ledges, cut out of the rocks by the sea when the relative levels of sea and land were different. These eroded platforms are strewn with large littoral boulders, and here and there are roughened with sea-stacks. In other places the old sea-margins are marked by terraces of accumulation, composed of gravel and sand. On the Croulin Islands remains of storm-beaches are visible at various levels up to 100 feet above the sea, at the heads of the narrow creeks.

IRELAND.

A.—General Statistics.

Field-work.

The small staff now retained in Ireland has been chiefly engaged in the task of revision described in my last Report. Mr. Kilroe in County Mayo has revised the mapping of the older rocks, and has traced new boundaries, carrying his work southwards into the County of Galway. He has surveyed a total area of 147¾ square miles, and has traced 187½ miles of boundary, besides closely examining 11 miles of coast-line. Mr. McHenry, continuing his work of the previous year, has revised the mapping of the crystalline rocks which range for 50 miles from Lough Conn, in County Mayo, through the Ox Mountains to Manor Hamilton in County Leitrim. He has surveyed 77 square miles and has traced 67 miles of new boundaries. He has likewise been engaged in a re-examination of ground at Howth and in South Wexford.

Appendix E.

REPORT BY DIRECTOR GENERAL.

Mr. Egan has been at work in counties Louth and Cavan. The collector, R. Clark, has been in the field from the middle of June until November, and has made an important addition to the Survey collections from the Silurian rocks of Counties Down and Armagh, having sent up 1,249 specimens of fossils. Mr. Watts, as already stated, was transferred in April last from the Irish Staff to the Jermyn Street Office, in order to overtake arrears in the Museum and to expedite the petrographical work in England and Wales. The vacancy thus caused in Ireland has been supplied by the appointment in July of Professor Sollas, who has taken over the work which was in charge of Mr. Watts, with the exception of such researches as were already well advanced. Professor Sollas has been able to render assistance in the field-work having accompanied Mr. McHenry in Howth and in the district of South Wexford.

Maps.

The field-work now in progress will supply important corrections and improvements for some of the maps, but it is not yet sufficiently advanced to allow any of the sheets to be revised for the engraver.

Duplicate copies of the following six-inch field maps have been made and are deposited in the office for reference by the public :—

Down.—Sheets 41 and 43, and parts of Sheets 22, 24, 25, 31, 32, 38, 39, 42, 43, and 44.

Leitrim.—Sheet 13 and parts of Sheets 1, 2, 3, 4, 5, 17, 20, 22, 26, 27, 30, 34, and 36.

Roscommon.—Sheet 13, and parts of Sheets 10, 16, and 19.

Sligo.—Sheets 34, 39, 40, 44, 45, and 47, and parts of Sheets 33, 35, 36, 37, 41, 42, and 46.

Wicklow.—Sheets 1, 2, 3, 4, 6, and 11.

Petrographical work.

For the first three months of the year Mr. Watts was engaged in Museum and office-work in Dublin preparatory to his transference to London. He went carefully through the rock-collections, labelling and registering a large number of specimens, completing a descriptive list of all the rock-specimens in the Museum, and clearing off arrears so as to leave the work in proper order for his successor. Professor Sollas in taking over the indoor duties previously discharged by Mr. Watts has, during the six months since his appointment, studied under the microscope and for the most part described 217 slides of Irish rocks. He has now a large series of specimens to examine in connexion with the recent revision in the western counties.

Geological Survey Collection in the new Museum.

The collections of rocks and fossils made by the Survey to illustrate Irish Geology and now exhibited in the Science and Art Museum, Dublin, have been still further augmented and improved in arrangement. A full account of these additions and changes has been furnished to the Director of the Museum, and will appear in his Report. I may more particularly refer here to three new cases which have been filled with specimens of rocks and fossils, and to the preparation of a series of remains of reptiles and fishes from the Kilkenny Coalfield, and of plants and other organisms from the Upper Old Red Sandstone of Kiltorcan Hill. The Handbook which was announced in last Report as about to be prepared is now far advanced. The portion relating to the fossils has been written by Mr. McHenry, and that dealing with the rocks by Mr. Watts is nearly finished. The work would have been issued during the past year had not its preparation been seriously interrupted by the transference of Mr. Watts from Dublin to London. It will be published in the early part of the present year. A valuable acquisition to the Survey collections in the Museum is a series of 40 enlarged photographs illustrative of interesting geological sections in Ulster. These, presented by the Belfast Naturalists' Field Club, have been framed and hung in the hall.

Inquiries for Geological information.

The office of the Survey in Dublin continues to receive many applications for information in regard to coal-mining and the working of other minerals, as well as respecting water-supply and other practical questions.

B.—*Record of Geological Work.*

In my Report for 1892 an account was given of the nature of the field-work which is now being carried on by the staff of the Survey in Ireland.

The re-examination of the older rocks has been steadily pursued during the past year, and though these re-surveys have not yet been completed, enough has been done to show that the results will be of great importance in regard to the interpretation of the geological structure and history of Ireland, and will also be of considerable interest and value in questions of geological theory.

Revision of Metamorphic areas.

The work done by Mr. McHenry in the hilly strip of ground which forms the Ox, Slieve Slish, and Benbo Mountains, extending through the western part of Mayo into Leitrim, points to the existence there of an ancient axis of eruptive rocks which have undergone more or less mechanical deformation. Much of the material constituting this early ridge occurs now as granulite or granulitic gneiss, but it includes also certain bands of crystalline lime tone. That these rocks are much more ancient than the "Dalradian" series, which consists here of more or less sheared conglomerates, grits, and shales or phyllites, with black carbonaceous or graphitic bands, appears to be definitely proved by the fact reported last year, that among the materials of the conglomerates, large blocks of granulite are included, like that of the ridge. During his traverses Mr. McHenry collected more than 400 specimens of the most typical and remarkable rocks for examination by the petrographer, and for exhibition in the Museum. This large amount of material will now be carefully worked out in the petrographical laboratory.

The younger ("Dalradian") group of quartzites and schists has been studied by Mr. Kilroe, who in continuation of his previous work, has carried his lines this year southward to Clew Bay. He finds that in Western Mayo these younger metamorphic rocks include some coarse conglomeratic bands and subordinate quartzites in their lower portions, with a higher quartzite which spreads over a larger area, the two quartzites being separated by a succession of alternating mica-schists and limestone bands. There can be little doubt that this great series of altered sedimentary rocks is merely a continuation of the younger schists of Donegal. Mr. Kilroe has devoted some months to the task of unravelling the complicated geological structure of the district, and has thus ascertained that the rocks have been thrown into frequent anticlinal and synclinal folds, and have likewise undergone considerable mechanical deformation. Their divisional planes, whether of original bedding or of super-induced cleavage and foliation are generally inclined in an easterly direction.

From the northern headlands of Donegal, southwards as far as Clew Bay, the general sequence and structure of the metamorphic rocks appears to remain tolerably uniform and persistent. But to the south of that inlet a new feature is presented which adds to the interest and complexity of the geological problems. A portion of the "Dalradian" series appears on the southern side of Clew Bay and includes the conspicuous quartzitic ridge of Croagh Patrick. Immediately to the south of this ridge certain rocks have been regarded as altered Silurian strata, and have been mapped as if the quartzite were regularly intercalated in them. Yet only a few miles still further south beyond the line of Killary Harbour, the schists are known to be unconformably covered by the Upper Silurian conglomerates. In some traverses of this ground several years ago I convinced myself that the lines now shown upon the published maps needed serious revision, and I accordingly requested Mr. Kilroe when he had worked down as far as Clew Bay to cross to its southern side and attack the difficult ground lying between Clew Bay and Killary Harbour. I have had frequent reports from him during the progress of this work, but have not yet had an opportunity of revisiting the ground. Already some singularly interesting and important results which admit of no question have been obtained. Thus Llandovery fossils have been found by Mr. Kilroe in the so-called metamorphic rocks south of Coagh Patrick where they had not before been detected, and he had thus proved these rocks to be of Silurian age. He is led to believe that the Croagh Patrick quartzite which appears to overlie these Silurian strata is brought into that position by a complex inversion which includes a small band of fossiliferous Upper Silurian rocks near the crest of the ridge. He could find no evidence of a break between the quartzite and the Llandovery strata. Not only so, but he has detected a conglomerate at the base of the band of quartzite which is traceable for eleven miles or more parallel to the ridge of Croagh Patrick but at a distance of several miles to the south. The two bands of quartzite he regards as outcrops of the same sheet

with its well-marked basal conglomerate. And if this be so the quartzite appears to be so conformably intercalated among Upper Silurian rocks that it is difficult to resist the conclusion that it must be of Upper Silurian age. But so much would follow from such a deduction that it may well be held over until the ground lying to the south has been exhaustively examined. In the course of his field-work Mr. Kilroe has likewise made extensive collections of the rocks examined by him for petrographical study in the office.

In the east of Ireland several districts have been the subject of more detailed examination. Mr. Egan has been engaged in the counties of Cavan and Longford, revising the igneous rocks associated with the Lower Silurian series of that district. During June and July he was engaged in County Louth revising Sheet 82 together with adjacent parts of Sheet 81 and 91, and especially in mapping out in detail the eruptive rocks of Clogher Head, which in some respects resemble those now being mapped by the Survey in the Isle of Man. A large number of specimens of these rocks was obtained for the Survey collection. Mr. McHenry also made a brief preliminary examination of the Clogher Head Coast, and took part with Professor Sollas in an examination of the south-east of County Wexford. They ascertained that an older mass of crystalline rock exists there overlapped by small basins of unaltered Lower Silurian strata. No pebbles of the crystalline mass were detected in the basal conglomerate though fragments of the Cambrian slates are not wanting. No evi ence of any contact metamorphism could be found. The crystalline rocks form a complex mass of granite and diorite presenting many signs of contact action between themselves, and greatly modified along particular lines by crushing and shearing.

Fossil-work.

The fossil-collecting of Mr. R. Clark in the Counties of Down and Armagh has resulted in the accumulation of a large mass of new material. Fossils have been obtained from 43 localities, of which 25 have not been previously cited. The specimens will now be carefully examined, and it is expected that from their evidence the various stratigraphical groups which have been mapped across the Silurian area of the whole of the south of Scotland will be identified and traced throughout the east of Ireland.

Petrography.

In the petrographical department some good work has been accomplished during the past year among Irish rocks. Mr. Watts has established, from a study of some of the Antrim trachytes, that perlitic structure, commonly understood to be peculiar to glassy or devitrified material, can be produced in a crystalline mineral such as quartz, and in a rock consisting of glass and disseminated minerals. The quartz of the trachyte of Sandy Braes in Antrim, exhibits perfect perlitic structure. The same observer has ascertained that amphibolites may originate from the alteration of pikrites, for he has found that in specimens from Greystones and Glendalough in County Wicklow, every stage can be traced from pseudomorphs of olivine in fibrous tremolite, contained in green hornblende, to complete crystals of tremolite, developed partly at the expense of the olivine-pseudomorphs, and partly at that of the surrounding green hornblende, the rock ultimately becoming an amphibolite. These observations on the alteration of pikrite and on the occurrence of perlitic structure in quartz were communicated to the British Association at its meeting in Nottingham last year. Igneous rocks of various types from different parts of Ireland have been examined and described by Mr. Watts, including the Crossdoney granite of County Cavan, mica-traps from the coast and mainland of County Down, and from Clogher Head in County Louth, and other varieties.

Professor Sollas, besides the petrographical routine already referred to, has devoted some time both in the field and indoors, to the study of the organisms that occur in the Cambrian rocks of Bray and Howth, and in the course of investigation has ascertained several fresh facts of interest. He has there discovered a new fossil which he proposes to name *Pucksia McHenryi*. It occurs in a narrow band of slate, which has also furnished *Oldhamia* and some spherical bodies resembling *Radiolaria*.

To facilitate the determination of minerals in rocks Professor Sollas has devised an ingenious apparatus by which the constituents in a mixture of minerals can be rapidly sorted out and the several species of minerals can be obtained separately with their specific gravity determined, as the result of a single operation. A description of this apparatus is given in *Nature*, Vol.

XLIX. (1893), p. 211. In the intervals of other work, Professor Sollas has made reduced copies of some eighty sheets of the one-inch map of Ireland, with a view of showing the distribution of *Eskers* and other glacial phenomena. From these maps a definite arrangement of the Eskers is made manifest, recalling at a suggestive way the distribution of a river and its tributaries. An account of the reduction was communicated to the meeting of the British Association at Nottingham. Of other work published during the latter half of the past year by Profesor Sollas the following papers, which were read before the British Association, may be cited here:—"On the minute structure of *Monograptus priodon*"; "On the origin of intermediate varieties of Igneous Rocks by intrusion and admixture, as observed at Barnavaon, Carlingford" (now in course of publication in the Transactions of the Royal Irish Academy); "On pittings in pebbles from the Trias"; "On the transformation of an amphibolite into a quartz-mica-diorite." A brief paper by him on "The Geology of Dublin and its neighbourhood" has also appeared (Proc. Geol. Assoc., Vol. XIII., pp. 91–122).

II. Palæontological Department, Museum, Jermyn Street.

The Palæontologists and Curators of Fossils, Messrs. Sharman and Newton, report to me that among the more interesting fossils which have been added to the Museum during the year is the series of Elgin Sandstone Reptiles, *Elginia mirabilis,* which has such a remarkable horned head; and four species of *Gordonia,* with *Geikia elginensis,* which are allied to the South African Dicynodonts. A fine series of fossil Hyæna teeth from the Torbryan Cave near Torquay, has been arranged to illustrate the various conditions of wear in which such teeth are found. This series includes several complete sets of both right and left upper and lower jaws, namely, 1. An almost complete and unique set of the milk dentition. 2. A complete set of permanent teeth, quite unworn, too young to have the fangs formed. 3. A similar set with perfect fangs, and the crowns slightly worn. 4. A similar set with crowns much worn. 5. A similar set but with the crowns nearly worn away. A complete series of Bear's teeth from the same cave has been placed with these. The cases at the southern end of the lower west gallery, formerly occupied by specimens of glass, have been handed over to the Palæontological Department for the exhibition of the larger specimens of the Pleistocene Mammalia, which hitherto have been much crowded and not properly displayed. These cases are a great advantage to this part of the collection, and allow of the exhibition in a suitable manner of some of the large Elephant bones, and especially of those from Endsleigh Gardens, presented to the Museum last year, which form a prominent feature in the gallery.

Some of the drawings illustrative of British fossils, which are exhibited in the galleries, have been replaced by others more in accordance with our present knowledge. Three such drawings, illustrating ten genera of Fishes and Reptiles, have been made by Mr. W. M. Redaway.

The Cretaceous vertebrata, contained in wall and table cases in the Upper Gallery, have been re-mounted and the synonomy brought up to date.

The modifications in the divisions of the Lias, adopted in the recently published Survey Memoirs, have necessitated an entire re-arrangement of all the cases of Lias fossils in the Museum. This work has occupied much time, the series in the wall-cases having been re-mounted and the synonomy corrected.

A large amount of re-mounting and cleaning has been accomplished during the year. In the Lower Gallery, the Upper Silurian fossils contained in Wall-cases 9 and 10; the Carboniferous Limestone Invertebrata in Wall-case 12 and Table-case 4; and part of the Devonian Fishes in Wall-cases 14 and 15 as well as the Coal Measure Plants in Wall-case 17 have been re-mounted and labelled; also the three Wall-cases and Table-cases 1 and 2 in the recesses of the south side, containing the Pleistocene Mammalia, have been cleaned and partly remounted. In the Upper Gallery the Cretaceous Invertebrata in Wall-cases 12, 13, 14, and Flat-cases 50, 51, 52, 53, and the Inferior Oolite Fossils in Wall-case 7*a* have been to a large extent re-mounted.

During the year numerous consignments of fossils have been received from the field-officers of the Survey, including specimens from the Palæozoic rocks, Inferior Oolite, Oxfordian, Corallian and Purbeck formations, and also from Cretaceous and Tertiary deposits. All these have been carefully examined, and as far as possible specifically determined, the information being supplied to the various officers. A series of Carboniferous Limestone fossils from the Isle of Man, forming part of the Cumming collection, was kindly lent by the authorities of the King William's College, Castletown. These specimens having been specifically determined, a list of them has been supplied to Mr. Lamplugh, to assist him in the geological mapping of the island.

The examination of proofs of the palæontological portion of Survey Memoirs passing through the press has occupied much time.

The Memoir by Mr. E. T. Newton on the Elgin Sandstone Reptiles mentioned in my last Report has now been published in the *Philosophical Transactions* of the Royal Society (Vol. 184B, p. 431, 1893), accompanied by sixteen plates. A series of specimens illustrating these Triassic Reptiles has been placed in the cases. Moulds of the remains have been prepared in order that other museums may obtain duplicates at a small cost. Six additional specimens have since been received from the Elgin Sandstone. These have been worked out in a similar manner to that in which the previous consignment was treated, and they have yielded the remains of a small primitive crocodilian closely allied to the celebrated *Stagonolepis,* likewise another new reptile of exceptional interest, since it is intermediate between the Parasuchian Crocodilians and Theropodous Dinosaurs. A paper embodying the result of this work has been read before the Royal Society by Mr. Newton who since my last Report has been elected a Fellow of the Royal Society.

A specimen of a peculiar white rock brought home by Captain Moore and Surgeon Bassett-Smith of H.M.S. Penguin from Fanny Bay, Port Darwin, N. Australia, was received from Captain J. Wharton, F.R.S., Hydrographer. Although having the appearance of chalk it was found to be almost wholly siliceous and, on examination with the microscope proved to be very largely, if not wholly, composed of the remains of *Radiolaria.* Dr. G. J. Hinde has been good enough to work out these remains, and has published a paper on them (*Quart. Journ. Geol. Soc.*, Vol. 49, p. 221, 1893). It is of much interest to find these organisms forming an extensive deposit at the Antipodes, at a time when they are being found so widely distributed in the older rocks of both Scotland and England.

A small but exceedingly interesting series of fossils, obtained by Dr. Donald from Seymour Island in the Antarctic regions has been received through Professor James Geikie for examination and identification. The most noteworthy of these fossils are forms of *Cucullæa* and *Cytherea,* which being most nearly related to species occurring in Lower Tertiary beds in England and to others found at a similar horizon in Patagonia, indicate the presence of deposits of early Tertiary age near to the edge of the great Antarctic Ice-barrier.

The Coal Measure Plants exhibited in the cases are now undergoing a thorough revision, and the work is well advanced, but it will need much additional labour before it can be completed.

The Collection of fossils in the Museum has been largely consulted by students and scientific workers during the year, to whom every endeavour has been made to render assistance. When necessary for the closer study of specimens by those engaged in special palæontological work, accommodation has been, as far as possible, afforded them in the private rooms of the department.

As detailed work frequently extends over a considerable time before its results can be published it may be well to give some idea of the numerous Museum specimens which have been made use of by scientific workers, by alluding to the species which during the last two or three years have actually been figured and described in various publications. Mr. R. Kidston has worked through a large number of Coal Measure and Carboniferous Limestone Plants, although only a few have been figured within the last year or so. The type specimens of *Bythotrephis worstonensis,* figured in the *Proc. Royal Soc., Edinburgh,* in 1892, are in the Museum. A peculier seed, long known from the Cromer Forest bed, has been described by Dr. Nathorst from continental

specimens, as *Paradoxocarpus carinatus*, and the English types have been figured by Mr. Clement Reid in the *Trans. Norfolk and Norwich Nat. Soc.*, 1893.

Mr. George Murray has figured in his "Phycological Memoirs" a new form of fossil Alga from the Coral Rag of Weymouth, one of his figured types being in this Museum. The Oolitic sponges are being monographed by Dr. G. J. Hinde and two specimens from the Portland and Purbeck Collections in the Museum have been figured in the Palæontographical Society's volume for 1893 as types of *Pachastrella antiqua*, Moore, and *Spongilla purbeckensis*, Young. From the Museum collection there are also figured in the same volume by Mr. Percy Sladen, a Cretaceous Starfish, as a type of Forbes' *Metopaster Bowerbankii*; by Mr. S. S. Buckman, a new Ammonite from the Inferior Oolite as *Sonninia densicosta*; by Mr. W. H. Hudleston about 30 specimens of Oolitic Gasteropods, of which nine are new species. Also in a previous volume of the Palæontographical Society, Professor T. Rupert Jones and Dr. H. Woodward have figured about 33 Palæozoic Phyllopoda from this Museum, 13 of which are figured for the first time. Dr. G. W. Gregory has likewise figured a new species of Maltese Urchin as *Metalia melitensis* in the *Trans. Royal Soc., Edinburgh*; and a new species of London Clay Polyzoon as *Membranipora Buskii* in the *Trans. Zool. Soc. for* 1893. In the Monograph upon the Devonian Invertebrata prepared by the Rev. G. F. Whidborne for the Palæontographical Society 94 specimens from this Museum have been figured, about 30 of which are new species. The metatarsus of a London Clay Bird in our cases has been figured by Mr. R. Lydekker in his "Catalogue of Fossil Birds in the British Museum," and referred to *Proherodius Owenii*.

Several specimens in the Museum have been figured by officers of the Department, namely, *Lepidodiscus Milleri* from the Carboniferous Limestone; *Mesoplodon scaphoides*, and a tooth of *Ailurus anglicus* from the Red Crag, in the *Quart. Journ. Geol. Soc.*; also a tooth of *Iguanodon Hillii* from the Chalk, of the Fish *Onychodus* from the Old Red Sandstone, and of Lemmings and Voles from the Brickearth, in the *Geological Magazine*. About 70 Museum specimens have been figured in the Survey Memoir on the British Pliocene Vertebrata (1891) and the type specimens of *Elginia mirabilis*, *Geikia elginensis* and *Gordonia Traquairi* from the Elgin Sandstone, published in the *Phil. Trans. Royal Soc.*, 1893, are in this Museum or in the Survey Collections in the Museum of Science and Art at Edinburgh.

III.—MUSEUM OF PRACTICAL GEOLOGY, JERMYN STREET.

Mr. Rudler, the Curator and Librarian of this Museum, reports to me that the total number of visitors to this Museum during the year 1893 was 42,241. Of this number, 28,585 were admitted during the mornings and 13,656, during the evenings.

The principal feature in the development of the Museum in the course of the past year has been the exhibition of the Nevill Collection of Minerals. This collection, including many of Mr. Lettsom's well-known specimens, was formed by the late Mr. William Nevill, of Godalming, and, having been purchased by Mr. Henry Ludlam, was included in his bequest to the Museum in 1880. For many years, however, it remained packed up, in consequence of want of space for its public exhibition. Two table-cases, with 72 glass-covered drawers, have now been placed for its accommodation on the principal floor, and the Collection, including nearly 4,000 specimens, is thus satisfactorily displayed.

The two new table-cases in the Hall referred to in last year's Report, have since been filled with a rich series of specimens, selected from the Ludlam Cabinets, representing the species Quartz and Fluor-spar, and including some exceptionally fine forms of these materials.

Six bold geological sections, illustrating the structure of certain parts of Britain, have been prepared to accompany the Collection of Rocks, and are now exhibited, framed and glazed, on the walls of the Petrographical Gallery.

A large number of models of mining machinery have been removed to South Kensington, primarily for the use of the classes at the Royal College of

Science, and this removal has necessitated, during the last few months, a partial re-arrangement of the contents of the Model Rooms. As one consequence of this re-arrangement, a series of wall-cases has been set free at the southern end of the West Gallery. These cases, after having been painted and re-fitted, have been thrown into the Palæontological Gallery, and are at present occupied by a collection of the fossil remains of British Elephants.

The handbook to the collection of British Pottery and Porcelain, in illustration of the Ceramic series in the Museum, mentioned in last year's Report as being then in preparation, has since been published. The Curator is now engaged on the compilation of a General Handbook to the Museum.

The Theatre attached to the Museum has been used during the past year for the delivery of three courses of Monday evening lectures to Working Men. The first course was on "Ore and Stone Mining," by Professor Le Neve Foster; the second was on "Some Recent Advances in Metallurgy," by Professor Roberts-Austen; and the third course was on "Minerals used for "Cutting, Polishing and the Fabrication of Tools," by Mr. Frank Rutley, Lecturer on Mineralogy at the Royal College of Science, London.

The evening meetings of the Royal Statistical Society, and of the Institution of Mining and Metallurgy continue to be held at the Theatre of this Museum.

The following tabular statements and lists are appended to this Report:—

I. Table showing distribution of the field-work in England and Wales.
II. Do. the distribution of field-work in Scotland.
III. Do. abstract of work in Scotland.
IV. A return of maps and other Survey publications issued to Government agents for sale.
V. List of Donations to the Museum of Practical Geology.

I have the honour to be,
Sir,
Your obedient servant,
ARCH. GEIKIE,
Director-General.

The Secretary,
Science and Art Department,
South Kensington, S.W.

V.

LIST OF DONATIONS TO THE MUSEUM OF PRACTICAL GEOLOGY.

ABBOT, W. J. L., Esq., F.G.S.—A specimen of *Membranipora eocena* from the London Clay of Highgate Archway.

BATH STONE FIRMS, Ltd.—Seven six-inch Cubes of Bath Stone, dressed.

BAUERMAN, H., Esq., F.G.S.—A small sample of Carborundum, the recently prepared abrading material, from the Chicago Exhibition.

BOUGHEY, Admiral.—A specimen of Flint with fucoid markings, from the shore at Margate.

BOYNTON, T., Esq.—An Earthenware Plate printed in blue, and having an impressed mark "Belle Vue Pottery, Hull."

CLAY, H. R., Esq.—Two specimens of *Crystal trempé*, or toughened Glass, made at Choisy-le-Roi, near Paris.

CREIGHTON, J. K., Esq.—Three specimens of Pigotite from St. Levan, Cornwall.

CUNNINGTON, W., Esq., F.G.S.—Six specimens of *Pentremites*, one of *Diastopora*, one of Fossil Wood, six of Cretaceous fossils from Haldon, and one of *Waldheimia impressa* from the Oxford Clay.

DAVIS AND Co., Messrs. E.—About twenty samples of Mica, with trade names.

DURLACHER, A., Esq.—Two valves of Pearl Oyster showing "baroque" pearl, from Shark Bay, W. Australia.

DYMOND, A. W., Esq.—A specimen of crystallized Magnetite from near Ilsington, Devonshire.

FARQUHAR, W., Esq.—A sample of "Sehta" or Cobalt Ore from the Khetri Mines, Rajputana, India.

FRANCIS, J., Esq.—Specimens from the New River Company's deep borings at Ware and Turnford.

FULLER, H. W., Esq.—A Crustacean, a Cone (?), and a specimen of *Carpolithus* from the Coral Rag of Weymouth.

GODDARD, Rev. C. V.—Specimens of Nodular Felsite from Moel Siabod, Caernarvonshire.

GUNN, H. H., Esq.—Well crystallized specimens of Orthoclase, Quartz, and Fluorite from Baveno, Piedmont.

HÄRCHE, Herr R.—Samples of Nickel Ore and Chrysoprase from Frankenstein, Silesia.

HOLLOWAY, T., Esq.—Two specimens of *Ammonites* from the Oxfordian of Somerford Parva.

JACK, R. L., Esq., F.G.S.—Auriferous Siliceous Sinter from Mount Morgan Gold Mines, Queensland.

JONES, E., Esq.—Fifteen small cut Chrysoprases.

JONES, T., Esq.—A polished section of red and green Chalcedony from India.

LAMPLUGH, G. W., Esq., F.G.S.—A specimen of *Ammonites Austeni* from the Red Chalk of Speeton.

MECHAM, G., Esq.—Two specimens of Sponge in Flint from Saffron Walden.

MÜLLER, W. J. E. de, Esq., F.G.S.—A sample of Black Spinel from the Prov. of Kanburi, Siam.

REID, C., Esq., F.G.S.—A specimen of Microgranite from Brittany.

RICHARDS, P., Esq.—Specimens of Mollusca and of Fish remains from the Upper Keuper of Shrewley, Warwick.

ROBERTSON, J. D., Esq.—A sample of "Banket" showing Gold from Johannesberg.

SALT UNION Co.—Rock Cores from the boring for Salt at Marston, Cheshire, showing the strata passed through to a depth of 2,608 feet.

SHARPE, C. B., Esq.—A specimen of "Blue John" from Derbyshire, samples of "Buxton Diamonds," and seven small Venetian bottles of twisted Glass.

STREETER, E. W., Esq.—A specimen showing Emerald in Arsenopyrite from Emmaville, N.S.W.

TALMAGE, Dr. J. E., Ph.D.—A splendid crystal of Selenite; also a very large cleavage plate of the same mineral, from Selenite Mound, Fremont R. basin, Utah, U.S.

TURNER, H. G., Esq.—A sample of Manganese Ore from Kodur, Vizianagram, India.

WALFORD, E. A., Esq., F.G.S.—A sample of iron-ore from Hook Norton.

WICKES, W. H., Esq.—A specimen of *Polyzoon* from the Great Oolite of Bradford-on-Avon; also one of Variolite from Carig Gwladys, Anglesey.

WILSON, E., Esq., F.G.S.—A specimen of Landscape Marble from Bedminster, Bristol.

WINWOOD, Rev. H. H., M.A., F.G.S.—A specimen of *Lima Toarcensis* and one of *Ammonites radians* from the Upper Lias of Bath; also a specimen of amygdaloidal diabase from the Mendips.

WOODWARD, H. B., Esq., F.G.S.—Specimen of *Eunomia radiata* from the Great Oolite of Somerset, of Forest Marble "slate" from Chavenage, Gloucestershire, and of weathered Great Oolite from near Tetbury.

WRAY, C., Esq.—Specimens of white Topaz, blue Corundum, and white and black Tin Ore from Perak, Malay Peninsula.

YOUNG, DANCE & Co., Messrs.—A sample of Tyne "Boghead Coal."

APPENDIX F.

Appendix F.

REPORT BY DIRECTOR, EDINBURGH MUSEUM.

REPORT of the DIRECTOR of the EDINBURGH MUSEUM of SCIENCE and ART for 1893.

During the year 1893 the various collections in the Museum have been enriched by numerous additions of important specimens, both by purchase and by gift.

The Refreshment-room, which was very little used by the public, was abolished, and the room which it had occupied made available for general Museum purposes. Suitable accommodation was thus gained for the exhibition of a classified series of casts of architectural ornament and details.

A work of considerable importance, involving much careful labour, was, in the course of the year successfully carried out by the Curator, Mr. Galletly, viz., the identification of a large number of the casts in the Museum, originally made under the direction of Sir Charles Barry for the use of the stone and wood carvers employed in the building of the present Houses of Parliament. The identification was made by comparing photographs of the casts, specially taken for the purpose, with details in the old churches of Lincolnshire and Norfolk, from which, it was known, many of the casts had been taken. While thus employed, Mr. Galletly, who was accompanied by the Museum photographer, at the same time had photographs taken of the originals *in situ*, with their surroundings. An interesting series of photographs was thus obtained, illustrative, not only of the Museum casts in particular, but of old English architecture in general.

Among the gifts may be specially noted:—

Original model of the marble group, "The Distressed Mother," by Sir R. Westmacott, R.A., 1822. Given by the Right Hon. J. H. A. Macdonald, C.B., Lord Justice-Clerk of Scotland.

Fine Babylonian Cylinder (Seal), in haematite, with figures of Merodac and others. 7th century, B.C. Given by George S. Mackenzie, Esq., London.

A series of Ethnographical Objects from Abyssinia and India. Given by Sir William Mackenzie, K.C.B., London.

Two models of Young and Beilby's Patent Retort for distilling shale, coal, &c., for the obtainment of ammonia and heating gases. Given by the Patentees.

Two pieces of Point d'Alençon lace. Given by Miss Liddell.

Topographical model of Edinburgh in plaster. Given by the late Charles Jenner, Esq., F.R.S.E.

Three pieces of fine Mechlin lace, early 18th century. Bequeathed by the late Mrs. Hay Miln, of Woodhill, Forfarshire.

Among the principal purchases are the following:—

Marble Wellhead and Capitals (10), North Italian, 15th and 16th centuries. (Cavendish-Bentinck Collection.)

Collection of Ecclesiastical Vestments, Altar Frontals, Chalice Veils, and other Embroideries (37 specimens in all). Sir Thomas Dick Lauder's Collection.

138 facsimiles, in bronze, of Medals, chiefly Italian, 15th and 16th centuries, by Monsieur Liard, Paris.

Seven pieces Hispano-Moresque Lustred Ware.

Plaster casts:—

- Donatello's colossal group, "Judith and Holofernes," in the Loggia dei Lanzi, Florence.
- Part of Transept Doorway, Bordeaux Cathedral, 14th century.
- Part of Rood-loft, Limoges Cathedral, 16th century.
- Part of Transept Door, Beauvais Cathedral, 16th century.
- High Cross, Tuam, Galway, 11th century.

Appendix F.

REPORT BY DIRECTOR, EDINBURGH MUSEUM.

The additions to the Library by donation and purchase have numbered 465 volumes besides pamphlets. Among the donors were the Government of France, the Trustees of the British Museum, the Science and Art Department, India Office, Smithsonian Institution, and Geological Survey of Canada. Lists of publications in the Library relating to Pottery and Glass have been issued. The Patent Library has received, as issued, the publications of Her Majesty's Patent Office. The Specifications of United States Patents are also now received, and will be available for consultation by the public as soon as the fittings requisite for their arrangement are completed. The number of persons by whom both the General Library and the Patent Library have been consulted during the year, exhibits a marked increase.

In the Gallery of Scottish Geology and Mineralogy in the immediate charge of Mr. J. G. Goodchild of the Geological Survey Department, the collections of Scottish rocks and fossils have been considerably augmented, and their nomenclature as far as possible revised up to date. The chief addition to the collection has been the original specimens, and casts therefrom, of the Reptilian remains lately described from the New Red Sandstone of Elgin. The collection of maps has been made as complete as possible, and has been displayed on an improved principle. In the Index Collections the principal additions have been a series of specimens intended to illustrate the formation of soils, with especial reference to those of Scotland. Models to a uniform scale of the sun and the inner planets have been placed in the gallery at their proper relative distances, with the object of illustrating by means of astronomical distances what is meant by geological time. Some aids to the study of geognosy have also been exhibited. The collection of Scottish photographs has been extended, most of the views relating to the geology of the neighbourhood of Edinburgh.

R. MURDOCH SMITH, Maj.-Gen., R.E.,
Director.

DONATIONS to the ART and INDUSTRIAL DIVISION during the Year 1893.

THE RIGHT HON. J. H. A. MACDONALD, C.B., Lord Justice Clerk, Edinburgh.
Original model in plaster of Sir R. Westmacott's marble group "The Distressed Mother."

JOHN HUTCHISON, ESQ., R.S.A., Edinburgh.
Plaster cast of bust, "A Roman Matron."

SIR WM. MACKENZIE, M.D., K.C.B., C.S.I., London.
49 ethnographical objects from Abyssinia and India.

REV. J. H. LAWRIE, Aneityum, New Hebrides.
7 ethnographical objects from New Hebrides.

J. A. HARVIE BROWN, ESQ., Dunipace, Larbert.
4 models showing Samoyede costumes.

MRS. LAWRIE, Edinburgh.
Chinese pagoda carved in bone and ivory.

MRS. BISHOP, Edinburgh.
Knitted stockings from Chitral, Kafiristan.

J. PAUL JUNR., ESQ., Edinburgh.
Model of a Cingalese outrigger canoe.

GEORGE S. MACKENZIE, ESQ., London.
Babylonian cylinder seal.

OWEN R. MITCHELL, ESQ., Waltham Cross, Herts.
Inscribed Babylonian brick.

JAMES LYLE, ESQ., Edinburgh.
Peruvian "mummy eye."

LIEUT.-COL. FEILDEN, Wells, Norfolk
Quern from Faroe Isles.

GEORGE BUNYARD, ESQ., Maidstone.
25 flint implements.

J. G. GOODCHILD, ESQ., F.Z.S., &c., Edinburgh.
Spurious flint implement from St. Acheul.

MESSRS. YOUNG and BEILBY, Peebles and Slateford.
2 models with modifications and diagram of the donors' patent shale retort.

C. JENNER, ESQ., F.R.S.E., Edinburgh.
Topographical model of Edinburgh.

MISS LIDDELL, Edinburgh.
2 pieces of Point d'Alencon lace.

A. R. WATSON, ESQ., Auckland, N.Z.
Wood and gum of Kauri pine.

J. MAXTONE GRAHAM, ESQ., J.P., Crieff.
Piece of *Picea Nordmanniana.*

THE LEITH DOCK COMMISSIONERS, LEITH.
Pieces of decayed timber piles.

T. BROADWOOD, ESQ., Innerwick, East Lothian.
Malformed potato.

CAPT. THOMAS ANGUS, Edinburgh.
Piece of copper ore dredged off Ergisteria, Greece.

COL. THURBURN, Upper Norwood, London, S.E.
Polished piece of deposit from Sprudel Spring, Carlsbad.
SCOTT B. WILSON, ESQ., Weybridge-heath, Surrey.
6 coloured plates of Hawaiian birds.
THOMAS WARDLE, ESQ., F.C.S., F.G.S., Leek.
Series of artificial dyes for silk.

BEQUESTS to the ART and INDUSTRIAL DIVISION during 1893.

3 pieces of lace bequeathed by the late Mrs. Hay Miln, of Woodhill, Forfarshire.

MODELS made in the MUSEUM WORKSHOP during 1893.

Model of Wright's patent floorcloth printing machine. Scale 2 inches to the foot.
Model of the Sun, Earth, and Venus, made to scale, to illustrate geological time by means of distance.

LOANS received by the ART AND INDUSTRIAL DIVISION during the Year 1893.

DEPARTMENT OF SCIENCE AND ART.
Old Italian marble well-head.
Old English fire-place.
3 pieces of textiles.
Restoration of Persian velvet.
33 plaster casts.
THE REPRESENTATIVES OF THE LATE RT. HON. CAVENDISH-BENTINCK, Streatham Common.
Old Italian marble well-head.
10 old Italian marble capitals.
M. FORSTER-HEDDLE, ESQ., M.D., St. Andrews.
1 piece each of serpentine from Portsoy, moonstone from Harris, and pavonine orthoclase from Norway.
C. JENNER, ESQ., F.R.S.E., Portobello.
Marble bust of Alfred Tennyson by T. Woolner, R.A.

LOANS withdrawn from the ART AND INDUSTRIAL DIVISION during the Year 1893.

W. G. DICKSON, ESQ., M.D., Edinburgh.
17 objects in white jade.
THE LORD PROVOST OF EDINBURGH.
Volunteer trophies.
THE REPRESENTATIVES OF THE LATE RT. HON. CAVENDISH-BENTINCK, Streatham Common.
Old Italian marble well-head.
10 old Italian marble capitals.
C. JENNER ESQ., F.R.S.E., Portobello.
Bust of Alfred Tennyson.
MISS RAEBURN (per MR. J. HORSBURGH, Edinburgh).
Oil painting by Sir Henry Raeburn.
FRED. RATHBONE, ESQ., London.
Wedgwood camei.

DONATIONS to the LIBRARY during 1893.

THE GOVERNMENT OF FRANCE.
Brevets d'Invention : Descriptions des Machines et Procédés. 12 vols.
INDIA OFFICE.
Archæological Survey of India : South Indian inscriptions. Vol. II., Part 2.
Fauna of British India. Moths, vol. I.
Illustrations of the Zoology of H.M. Marine Surveying Steamer "Investigator," Part I.

Appendix F.

MR. G. G. Hardingham, 191, Fleet Street, London.
Patents for Inventions and how to procure them.
The Adumbration of Inventions.

REPORT of the KEEPER of the NATURAL HISTORY COLLECTIONS for the Year 1893.

In the Natural History Department the erection of new wall-cases along the north side of the smaller Mammalian Hall, along with the reconstruction of those already occupying the other three sides, has been followed by a partial re-arrangement of the Mammalian collection, which will be completed as soon as the wall-cases in the adjoining great hall have undergone a similar treatment.

The exhibited collection of Birds has been entirely re-labelled, the labels having been reprinted so as to bring the nomenclature employed up to the present date.

The collections both of British and of European Lepidoptera have been entirely revised and re-arranged.

For the re-arrangement and revision of the Mineral collection the temporary services of Professor Heddle, of St. Andrews, were again obtained for one month, and though the work is not yet completed, satisfactory progress has been made.

Numerous donations to the various collections have been received, all of which are noted in the appended list. Of these may be specially mentioned another donation of fossil fishes from the Caithness Flagstone Company, containing a unique specimen of *Cephalaspis* belonging to a species new to science. A specimen of the Red-breasted Flycatcher (*Muscicapa parva*) from the Monarch Islands, the first occurrence of the species in Scotland, has been received from Mr. W. A. Tulloch, and a specimen of the fish *Scorpæna dactyloptera*, from the Yorkshire coast, its first recorded occurrence on the east side of the British Islands, was presented by Mr. T. H. Nelson, of Redcar. To the Royal Society of London the Museum is also indebted for a set of the mammalian bones from the Har-Dalam Cave, Malta, recently collected by Mr. J. H. Cooke.

Numerous purchases have also been made, among which may be mentioned the collection of coal measure fossils from the Shotts District of Lanarkshire, made by the late Mr. William Grossart, Surgeon, Salsburgh; a set of accurately determined rocks from Germany; and a specimen of the Brindled Gnu from Africa.

Appended is a statement of the routine work performed in the Natural History Department during the year.

January 17th, 1893.

RAMSAY H. TRAQUAIR, M.D.,
Keeper.

Appendix F.

REPORT BY DIRECTOR, EDINBURGH MUSEUM.

NATURAL HISTORY DEPARTMENT.

DONATIONS during the Year 1893.

A pair of Lapland Buntings (*Calcarius Lapponicus*), from near Berwick-on-Tweed.
Presented by George Bolam, Esq., Berwick-on-Tweed.

Specimens of *Cancer pagurus, Hyas araneus, Cucumaria frondosa, Amphithopsis latipes*, a zoophyte, *Brissopsis lyrifera* (6), Cumaceous Crustaceans (3), and *Motella cimbria* from the Firth of Forth; also *Solea lutea* (3), and Cumaceous Crustaceans (7) from Moray Firth.
Presented by Thomas Scott, Esq., 14, Lorne Street, Leith.

Mass of Fish spawn from near St. Abb's Head, and specimens of Great Forked Beard (*Phycis blennioides*) from near the Isle of May; Lumpsucker (*Cyclopterus lumpus*), Great Forked Beard (*Phycis blennioides*), Common Crab (*Cancer pagurus*), with a large Sea-Anemone (*Tealia crassicornis*), growing on the carapace, Piked Dogfish (*Acanthias vulgaris*), Haddock (*Gadus æglefinus*), Common Tope (*Galeus canis*), and Storm-Petrel (*Procellaria pelagica*), all from the North Sea; also a Tadpole Fish (*Raniceps trifurcus*), from the Firth of Forth.
Presented by Mr. Chas. Muirhead, 79, Queen Street, Edinburgh.

Specimens of Sparrow Hawk (*Accipiter nisus*), and Yellow Bunting (*Emberiza citrinella*), from Doune, Perthshire.
Presented by Lieut.-Col. Duthie, R.A., Row, Doune, Perthshire.

Dried specimen of *Ostracion* sp. from Florida.
Presented by Col. Thorburn, Kirkfell, Highland Road, Upper Norwood, London.

Specimens of the Eared Grebe (*Podicipes nigricollis*), from Aberlady, and Coot (*Fulica atra*).
Presented by Peter Adair, Esq., 13, Spottiswoodd Street, Edinburgh.

Specimen of Hybrid between Pheasant and Domestic Fowl.
Presented by Miss Helen M. Birley, Clifton Hall, near Preston, Lancashire.

Skull of Takin (*Budorcas taxicolor*), and skin of Indian Wild Dog (*Cyon Dukhunensis*), from Tibet.
Presented by Dr. T. Burn-Murdoch, Morningside Road, Edinburgh.

Two Glaucous Gulls (*Larus glaucus*), and one Richardson's Skua (*Stercorarius crepidatus*), from Foula, Shetland.
Presented by Frank Traill, Esq., Duke Street, Edinburgh.

Specimens of Red-breasted Merganser (*Mergus serrator*), Sclavonian Grebe (*Podicipes auritus*), and Wigeon (*Mareca penelope*), from the Tay Estuary; Puffin (*Fratercula arctica*), from Ardnamurchan; young Water Hen (*Gallinula chloropus*), and hen Pheasant (*Phasianus colchicus*) in male plumage from Newport, Fife.
Presented by William Berry, Esq., Tayfield, Newport, Fife.

Specimens of Stonechat (*Pratincola rubicola*), Rock Pipit (*Anthus obscurus*), Ringed Plover (*Ægialitis hiaticula*), Great Black-backed Gull (*Larus marinus*), and Common Gull (*Larus canus*), from Dunbar; twenty-five zoological specimens from Glen Avon, Banffshire; twelve living specimens of Great Crested Newt (*Molge cristata*), from the Braid Hills, Edinburgh; and a number of zoological specimens principally Crustacea, from North Berwick.
Presented by W. Eagle Clarke, Esq., Museum of Science and Art, Edinburgh.

Bones of Mammalia from the Har Dalam Cave, Malta.
Presented by the Royal Society of London.

Deformed vertebral column of the Haddock (*Gadus æglefinus*).
Presented by Robert Anderson, Esq., 67, Princes Street, Edinburgh.

Male Hybrid between male Greenfinch (*Ligurinus chloris*), and female Bullfinch (*Pyrrhula europæa*); also specimens of male Greenfinch (*Ligurinus chloris*), and Nightingale (*Daulias luscinia*).
Presented by D. Smellie, Esq., St. James Sq., Edinburgh.

Specimen of *Sebastes viviparus*, captured off the coast of Aberdeenshire.
Presented by Geo. Sim, Esq., 14, King Street, Aberdeen.

Specimens of Charr (*Salmo alpinus*) from Loch Fada, North Uist; Dragonet (*Callionymus lyra*), from Loch Maddy, North Uist; pied variety of Mole (*Talpa europæa*) from Dunipace, Larbert; and nest of Crested Titmouse (*Parus cristatus*), in an old post from Rothiemurchus Forest.
Presented by J. A. Harvie-Brown, Esq., Dunipace, Larbert.

DONATIONS to the NATURAL HISTORY DEPARTMENT during 1893—*cont.*

Specimens of *Aphrodite aculeata* from Cramond; Palmated Newt (*Molge palmata*), Blue Titmouse (*Parus cæruleus*), Bar-tailed Godwit (*Limosa lapponica*), and immature Common Tern (*Sterna fluviatilis*), from Dalmeny; Red-throated Diver (*Colymbus septentrionalis*), from the Firth of Forth; young Corn Crake (*Crex pratensis*), Slow-worm (*Anguis fragilis*), and two specimens of the Lesser Redpoll (*Linota rufescens*), from Morvern, Argyllshire; and Viper (*Pelias berus*) from N. E. Mull.
Presented by Charles Campbell, Esq., Dalmeny.

Seven Flying Lizards.
Presented by Sir Wm. Mackenzie, K.C.B., London.

Two specimens of *Cincindeia campestris* from Tents Muir, Fife.
Presented by Master Hector Burn-Murdoch, Tayfield, Newport, Fife.

Three specimens of malformed Trout from Wintersett, near Wakefield.
Presented by Sir J. R. Gibson Maitland, Bart., Sauchie House, near Stirling.

Specimen of Pike (*Esox lucius*), four specimens of Perch (*Perca fluviatilis*), one of Sharp-nosed eel (*Anguilla vulgaris*), and a Coot (*Fulica atra*), in down from Duddingston Loch; also thirty-two living specimens of Minnow (*Leuciscus phoxinus*) from Gogar Burn.
Presented by Mr. Donald Sinclair, 5, Brown Street, Edinburgh.

Specimens of Orthoclase, Quartz Crystals, Contorted Quartz, Limonite, Hard Carbonate with Bromide of Silver, Fluor Spar, Cassiterite in Calcite, and soft Carbonate Silver Ore.
Presented by H. Hamilton Gunn, Esq., Marionville, Restalrig.

Specimens of Datolite and Prehnite from Barnton Railway Cutting.
Presented by J. G. Goodchild, Esq., of H.M. Geological Survey.

Specimen of Golden Eagle (*Aquila chrysaetos*) from West Ross shire.
Presented by Osgood H. Mackenzie, Esq., Inverewe, Poolewe, Rossshire.

Nest of Bank Vole (*Arvicola glareolus*), from Dalmeny Park, and nestling Kestrel (*Falco tinnunculus*), from Balnagard, Perthshire.
Presented by Bruce Campbell, Esq., British Linen Company's Bank, Edinburgh.

Specimens of Prehnite and Thomsonite from Bowling, near Glasgow; and twelve specimens of Rocks and Minerals from Lendal Foot, Ayrshire.
Presented by Prof. M. F. Heddle, M.D., St. Andrews.

Specimen of the Perch (*Perca fluviatilis*), from Duddingston Loch.
Presented by Mr. Alexander Walker, 47, Potterrow, Edinburgh.

Specimens of Datolite and Prehnite, from Barnton Railway Cutting.
Presented by Mr. Peter Dalgleish, Museum of Science and Art, Edinburgh.

Young male specimen of Golden Oriole (*Oriolus galbula*), from Sanday, Orkney.
Presented by William Harvey, Esq., Lopness, Sanday, Orkney.

Specimen of Bronze-winged Pigeon (*Phaps chalcoptera*), and Egg of Australian Crane (*Grus australasiana*).
Presented by Miss E. M. Traquair, 8, Dean Park Crescent, Edinburgh.

Specimen of Belted Bonito (*Pelamys sarda*).
Presented by Mr. James Watson, Fishmonger, 104, Leith Street, Edinburgh.

Specimen of *Scorpæna dactyloptera* from Coatham on the Yorkshire coast.
Presented by T. H. Nelson, Esq., Redcar, Yorkshire.

Specimen of the Curlew (*Numenius arquatus*) in down, from the Pentland Hills.
Presented by Robert Godfrey, Esq., 46, Cumberland Street, Edinburgh.

Living specimen of Pike (*Esox lucius*).
Presented by Mr. George Hunter, Potterrow, Edinburgh.

Four Lizards from Java.
Presented by Bernard Stracey, Esq., 45 Fountainhall Road, Edinburgh.

Skins of one Mammal and ninety-two Birds.
Presented by J. J. Dalgleish, Esq., Brankston Grange, Bogside Station, Stirling.

Eight specimens of Eggs and other organic remains in Volcanic Tuff, from the Grand Canary, and one Rock specimen.
Presented by General Cadell, Cockenzie House, Prestonpans.

Variety of the Puffin (*Fratercula arctica*), from Nalsoe, Faroe.
Presented by Lieut.-Colonel Feilden, R.A., West House, Wells, Norfolk.

Young in down of Richardson's Skua (*Stercorarius crepidatus*), from Shetland.
Presented by Mr. Donald Knight, Museum of Science and Art, Edinburgh.

Variety of Water Vole (*Arvicola amphibius*), from near Carlisle.
Presented by Isaac Brown, Esq., 54, Dick Place, Edinburgh.

Appendix F.

REPORT BY DIRECTOR, EDINBURGH MUSEUM.

DONATIONS to the NATURAL HISTORY DEPARTMENT during 1893—*cont.*

Two pied Water Voles (*Arvicola amphibius*), from Chirnside, Berwickshire.
Presented by Dr. Stuart, Hillside, Chirnside.

Specimen of *Colias edusa* var. *helice.*
Presented by Dr. H. Hebblethwaite, Burley-in-Wharfedale, near Leeds.

Living specimen of Pike (*Esox lucius*).
Presented by Mr. J. Stephenson, 132, High Street, Edinburgh.

Three specimens of the Natterjack Toad (*Bufo calamita*), from Southernness, Kirkcudbrightshire.
Presented by Robert Service, Esq., Maxwelltown, Dumfries.

Male specimen of Argus Pheasant (*Argus giganteus*), from Selangor, Straits Settlements.
Presented by Lawrence Dougal, Esq., Kivala, Lumpor, Selangor.

Male specimen of Quail (*Coturnix communis*), from Caddonlee, Selkirkshire.
Presented by Mr. Tom Speedy, Edinburgh.

Specimen of Quail (*Coturnix communis*), from Stoneykirk, Wigtownshire.
Presented by William Cochrane, Esq., Auchentibbert, Sandbeach, Stranraer.

Eleven specimens of Birds and Reptiles, from South-eastern Africa.
Presented by Master Harry Johnston, 11, Nile Grove, Edinburgh.

Forty-three specimens of Fossil Fishes, from the Old Red Sandstone of Caithness.
Presented by the Caithness Flagstone Co., Limited.

Immature Goldeneye (*Clangula glaucion*) from Cramond.
Presented by William Lumley, Esq., Cramond.

Specimen of Heron (*Ardea cinerea*), from Newport, Fife.
Presented by R. Berry, Esq., Tayfield, Newport, Fife.

An Eel (*Anguilla vulgaris*) in spirit, from the Isle of May.
Presented by Mr. George Sandeman, St. Andrews.

Little Auk (*Mergulus alle*), and Red-breasted Fly-catcher (*Muscicapa parva*), from the Monach Islands.
Presented by Mr. William A. Tulloch, Monach Lighthouse, Lochmaddy, North Uist.

Great Northern Diver (*Colymbus glacialis*), from Durness, Sutherland.
Presented by Charles Grant, Esq., Manse of Durness, Sutherland.

A collection of zoological specimens from Old Calabar.
Presented by Charles Ovens, Esq., 1, Salmond Place, Abbeyhill, Edinburgh.

Twenty three specimens of Reptiles and Batrachians.
Presented by George E. Mason, Esq., 203, Ebury Street, Eaton Square, London, S.W.

Great Northern Diver (*Colymbus glacialis*), from Shetland.
Presented by Alexander Sturrock, Esq., 26, Craigmillar Park, Edinburgh.

Male Pochard (*Fuligula ferina*) from Duddingston Loch.
Presented by C. M. Pelham Burn, Esq., Prestonfield, Edinburgh.

Melanic specimen of the Bullfinch (*Pyrrhula europæa*).
Presented by C. Heron Watson, Esq., Bullionfield, Dundee.

APPENDIX G.

Appendix G.

REPORT BY DEAN OF ROYAL COLLEGE OF SCIENCE, DUBLIN.

REPORT of the DEAN and COUNCIL of the ROYAL COLLEGE OF SCIENCE for IRELAND for the Year 1893.

SIR, 20 February 1894.

I HAVE the honour to submit the annual report of the Dean and Council of the Royal College of Science for Ireland for the year 1893, together with copies of the examination papers for the past session, 1892–93, and the Directory of the College for the session 1893–94.

The courses of instruction have been duly carried out, and Sessional Examinations have been held in all subjects. In the principal subjects the examiners appointed by the Department have acted conjointly with the professors. This has proved to be a great relief to the students who formerly were placed at a disadvantage in being obliged to pass two distinct examinations consecutively in each subject, one on papers set by the external examiners, the other, on questions set by the professors. Under the conjoint system the students' work is reduced to one half, and the examination is both more thorough and more fair to beginners.

During the year Mr. E. V. Clark, F.C.S., Associate of the Royal School of Mines, Associate of the Royal College of Science, London, was appointed Demonstrator for Chemistry and Assaying, and Mr. J. P. Johnston, M.A., was appointed Demonstrator in Mathematics.

The opening of the present session in October was marked by the commencement of studies under a new curriculum which had been sanctioned by My Lords of the Committee of Council on Education, the effect of which it is believed will prove decidedly beneficial to the progress of the students of the first year and increase the numbers of those who enter for the full college courses of education.

The Professor of Descriptive Geometry and Engineering has given practical demonstrations in screw cutting and tempering steel and case-hardening iron. At the expressed desire of the students of the third year in the Faculty of Engineering, the Professor has delivered a gratuitous course of lectures on photography. Under the new curriculum the students of the first year have passed through a course of mechanical drawing in place of descriptive geometry in the first term of the present session.

The Council beg leave once more to draw attention to the inadequate accommodation of the mathematical class room which is low roofed, badly lighted, and deficient in ventilation. The ventilation of the chemical laboratory, which has been officially recognized as imperatively necessary, has not been proceeded with. The accommodation asked for years ago for the class of mineralogy has not been provided, and the space at present available is quite inadequate as regards light and ventilation. We beg leave to draw attention again to the fact that the want of accommodation for laboratory teaching for the library, and nearly every department of the college, has been repeatedly mentioned in the reports of the Dean and Council, and remains more urgently pressing since the increase in the number of students.

The Professor of Botany finds continued and increasing beneficial effects on the botanical instruction in the college by the use of the Herbarium in the Science and Art Museum. Every facility for study has been given by Mr. Moore, the Keeper of the Botanic Gardens at Glasnevin, by supplying specimens, &c., as heretofore for botanical instruction in the college.

Practical work in geology for associate students was commenced in October and has lent additional interest to the subject. Attention has been directed to the determination of the characters and constituents of rocks in the simplest possible manner. The arrangement of the teaching collection and reserve specimens has become possible owing to the appointment of Mr. Lyburn, Associate of the Royal College of Science, as a temporary assistant. An extended collection illustrating stratigraphical geology is now in course of formation.

The Professor of Zoology has acquired various specimens, and the arrangement of the collection has been proceeded with. Schedules for the guidance

of students in practical work have been printed. A large number of lantern slides for lecture demonstrations have been purchased, or made in the photographic room belonging to the Biological Department.

A gyrostat, as designed by Lord Kelvin, has been added to the collection of instruments illustrating Applied Mathematics and Mechanism.

Several pieces of physiological apparatus have been purchased and added to the Botanical collection, and the Professor of Engineering has purchased a lantern for extending his class demonstrations, which has proved advantageous.

Two of Professor Heim's fine models illustrating natural features of the earth's surface have been added to the geological collection. Additions also have been made of typical rock specimens and fossils.

The following distinctions have been gained by former students of this College during the past year:—Mr. John E. Purvis, B.A., Cantab., Associate of the Royal College of Science, has been appointed Assistant to the Professor of Chemistry at the University of Cambridge. Mr. Leonard J. Spencer, B.A., Cantab., Associate of the Royal College of Science, has been appointed Assistant Curator in the Mineralogical Department of the British Museum.

Mr. Walter B. Robertson obtained 2nd Class Honours in Biology and Physiology at the M.A. Degree Examination in the Royal University of Ireland, and Miss Sara F. Green obtained her B.A. Degree at the same University.

In order to obtain information from original sources for the benefit of the class attending the lectures on metallurgy, the Professor of Chemistry, assisted by Mr. Hugh Ramage, the Assistant Chemist, spent the greater part of the Christmas and Easter vacations at the works of the London and North-Western Railway Company at Crewe and of the Dowlais Iron Company in South Wales in studying the chemistry of the Bessemer process of steel manufacture. The results of the spectroscopic observations then made have, to a great extent, been worked up and arranged for publication. Enlarged copies of some of Professor Hartley's photographs of "Flame Spectra at High Temperatures" and "Bessemer-flame Spectra" have been acquired by the College for teaching purposes.

The Professor of Botany with Miss Hensman has continued his investigations on the Marine Algæ of Ireland.

The Professor of Zoology with Miss A. M. Shackleton has investigated the Anatomy of the Actiniaria.

Some of the scientific contributions of the College staff published during the year are contained in the following list:—

On some Points in the Chemical Technology of Drying Oils, Oil Boiling, and Bleaching, by Prof. Hartley, F.R.S. Journal of the Society of Arts, 1893.

Flame Spectra at High Temperatures. Part I.

Oxyhydrogen Blowpipe Spectra, by W. N. Hartley, F.R.S. (Abstract) Proc. Roy. Soc., Vol. 54. Printed for the Philosophical Transactions, 1894.

A Visit to Roundstone, co. Galway. Irish Naturalist, by Prof. Johnson, D.Sc.

Marine Algæ new to Ireland, by Prof. Johnson, D.Sc. Irish Naturalist.

Two papers by Mr. Duerden on Irish Hydroideæ and Polyzoa. Proc. Royal Irish Academy.

Note on the occurrence of Lithothamnion in the bed of the River Liffey. Prof. O'Reilly, M.R.I.A. Proc. Royal Irish Academy.

On the Antipodal Relations of the Sandwich Islands, in South Africa. Proceedings of French Association for the advancement of Science. Besançon meeting, by Prof. J. P. O'Reilly, C.E., M.R.I.A.

"On Hemitrypa hibernica, M'Coy." Proc. Roy. Dublin Soc., by Grenville A. J. Cole, F.G.S., Vol. VIII.

"The Beauty and Use of Irish Building Stones," by Grenville A. J. Cole, F.G.S., M.R.I.A. Irish Naturalist, 1893.

"On some examples of Cone-in-Cone structure," by Grenville A. J. Cole, F.G.S. Mineralogical Magazine, Vol. X.

"The Rocks of Rhobell-fawr," by Grenville A. J. Cole, F.G.S., M.R.I.A. Geological Magazine, 1893.

Signed on behalf of the Dean and Council,

W. N. HARTLEY.

REPORT of the SECRETARY of the ROYAL COLLEGE OF SCIENCE FOR IRELAND for the Year 1893.

SESSION 1892–93.

During the Session ending in June 1893 the following courses of Lectures, Lessons, and Demonstrations were given:—

1st Year's Classes.

		Students.
115	Lectures in Pure Mathematics, by Prof. Orr, attended by	21
61	„ Elementary Mechanics, by Prof. Orr, attended by	19
48 / 27	„ Descriptive Geometry, by Prof. Lyon / „ „ „ „ Mr. Taylor } attended by	18
176	Lessons in Geometrical Drawing, by Prof. Lyon attended by	19
61	Lectures in Theoretical Chemistry (exclusive of 14 Voluntary Tutorial Classes by Mr. Ramage), by Prof. Hartley, attended by	27
58	„ Experimental Physics (exclusive of 11 Tutorial Classes by Mr. Brown), by Prof. Barrett, attended by	23

2nd Year's Classes.

75	Lectures in Pure Mathematics, by Prof. Orr, attended by	11
65	„ General Mechanics, by Prof. Orr, attended by	12
53	Lessons in Mechanical Drawing, by Prof. Lyon, attended by	10
215	„ Practical Chemistry, by Prof. Hartley, attended by	40
232	„ Practical Physics, by Prof. Barrett, attended by	42
20	Lectures in Elementary Botany, by Prof. Johnson, attended by	12
45	Lessons (additional) in Practical Botany, by Prof. Johnson, attended by	5
14	Lessons in Practical Botany, by Prof. Johnson, attended by	12
16	Lectures in Elementary Zoology, by Prof. Haddon, attended by	9
16	Lessons in Practical „ „ „	12
45	Lectures in Mineralogy (exclusive of 30 voluntary Demonstrations), by Prof. O'Reilly, attended by	10

3rd Year's Classes.

29	Lectures in Thermodynamics, by Prof. Orr, attended by	9
25	„ Mechanism, by Prof. Lyon, attended by	9
64	„ Applied Mechanics and Hydrodynamics, by Prof. Orr, attended by	5
72	„ Engineering, by Prof. Lyon, attended by	6
136	Lessons in Drawing „ „	5
36	Lectures in Surveying „ „	8
13	Lessons in Practical Physics, by Prof. Barrett, attended by	2
58	Lectures in Geology, by Prof. Cole, attended by	8
3	separate courses of 50 hours' each in Practical Geology, by Prof. Cole, attended by	3
25	Demonstrations in Palæontology, by Mr. Duerden, attended by	8
56	Lectures in Mining, by Prof. O'Reilly, attended by	4
43	Demonstrations in Practical Mineralogy by Prof. O'Reilly, attended by	2
28	Lectures in Applied Chemistry, by Prof. Hartley, attended by	5
175	„ Analytical Chemistry „ „	2
116	Lessons in Assaying „ „	2
28	Lectures in Metallurgy „ „	4

The total number of students who attended the College during the session 1892–93 was 113, of whom 34 were Associate students prosecuting the full three years' course, with the view of obtaining the diploma of Associate, and 79 were Non-Associate students. The corresponding numbers for the previous session, 1891–92, were 109, of whom 28 were Associate students, and 81 were Non-Associate students.

The following table gives the results of the Sessional Examinations held in June 1893:—

Subject of Examination.	No. of Students.	No. of Candidates who entered for Examination.	Passed.	Passed with Credit.	Students to whom Prizes were awarded.
		1st Year's Classes.			
Elementary Pure Mathematics.	21	15	10	8	J. P. Carr (1st prize). C. Jefcoat, J. H. Wigner (2nd prize divided).
Elementary Mechanics	19	16	10	6	J. H. Wigner (1st prize). J. P. Carr (2nd prize).
Descriptive Geometry	18	15	13	8	C. Jefcoat (2nd prize).
Geometrical Drawing	19	15	13	8	Prize divided by C. Jefcoat and W. Hopwood.
Theoretical Chemistry	27	15	7	3	J. H. Wigner (1st prize). J. P. Carr (2nd prize).
Experimental Physics	23	16	10	7	J. H. Wigner (1st prize). C. Jefcoat (2nd prize).
		2nd Year's Classes.			
Pure Mathematics	11	9	4	3	P. Pinkerton (1st prize). W. Barlow, S. D. Carothers (2nd prize divided).
General Mechanics	12	9	5	3	P. Pinkerton (1st prize). W. Barlow (2nd prize).
Mechanical Drawing	10	8	[illegible]	5	W. Barlow (1st prize). S. D. Carothers (2nd prize).
Practical Chemistry	40	7	7	7	C. C. O'Gorman (1st prize). P. Pinkerton (2nd prize).
Practical Physics	42	9	9	6	P. Pinkerton (1st prize). S. D. Carothers (2nd prize). W. Barlow (extra prize).
Elementary Botany, with Laboratory work.	11	8	8	5	W. Crossley (1st prize). P. Pinkerton (2nd prize).
Elementary Zoology, with Laboratory work.	9	7	7	5	W. Barlow (2nd prize).
Mineralogy	10	8	4	3	W. Crossley (2nd prize).
		3rd Year's Classes.			
Mechanism and Thermodynamics.	9	8	8	3	T. G. H. Shaw (2nd prize).
Applied Mechanics and Hydrodynamics.	5	4	3	2	T. G. H. Shaw (2nd prize).
Engineering and Drawing	6	4	4	4	H. E. Spencer (1st prize).
Surveying	8	6	6	5	H. E. Spencer (1st prize). T. G. H. Shaw (2nd prize).
Practical Physics (optional)	2	No examination held.			—
Geology and Palæontology	8	6	6	5	A. Mort (1st prize). T. G. H. Shaw (2nd prize).
Mining	4	2	2	2	A. Mort (1st prize).
Metallurgy	4	2	2	2	A. Mort (1st prize).
Applied Chemistry	5	2	2	2	P. M. Davies (1st prize).
Analytical Chemistry	2	2	2	2	P. M. Davies (1st prize).
Assaying	2	2	2	2	A. Mort (2nd prize).

The two Royal Scholarships competed for by the Associate students of the first year were awarded to Messrs. William Hopwood and Edgar W. Riley.

Appendix G.

REPORT BY SECRETARY, ROYAL COLLEGE OF SCIENCE, DUBLIN.

The silver medal, for best answering on the courses common to the first and second years, was awarded to Mr. William Barlow.

The diplomas of Associate were awarded to—

Mr. Arthur Mort	Faculty of Mining.
,, Edward St. J. Lyburn	Faculty of Mining.
,, Harold E. Spencer	Faculty of Engineering.
,, Tom G. H. Shaw	Faculty of Engineering.
,, William H. Allen	Faculty of Engineering.
,, John A. Guerrini	Faculty of Engineering.
,, Charles R. Darling	Faculty of Manufactures.
,, Percy Marr Davies	Faculty of Manufactures.

SESSION 1893–94.

The statistics herein given as to the number of students registered for the current session, 1893–94, include only the Associates, and Non-Associates who have entered for the courses of the first term up to the 31st December 1893.

The total entries for the two terms of the session will appear in the report for the year 1894.

The number of students registered up to the 31st December 1893, for the courses of the current session is as follows :—

1st Year's Courses.

Pure Mathematics	15
Elementary Mechanics	14
Descriptive Geometry	14
Geometrical Drawing	14
Theoretical Chemistry	23
Practical Chemistry	14
Experimental Physics	14
Practical Physics	14

2nd Year's Courses.

Pure Mathematics	11
General Mechanics	10
Mechanical Drawing	7
Machine Construction and Drawing	3
Advanced Chemistry and Metallurgy	5
Practical Chemistry	20
Practical Physics	13
Elementary Zoology	10
Practical Zoology	15
Elementary Botany	9
Practical Botany	10
Mineralogy	11
Mineralogy—Demonstration	10

3rd Year's Courses.

Mechanism and Thermodynamics	4
Applied Mechanics and Hydrodynamics	5
Engineering	5
Drawing	6

REPORT BY SECRETARY, ROYAL COLLEGE OF SCIENCE, DUBLIN.

Surveying (Practice)	2
„ (Field Work)	2
Practical Chemistry	2
Assaying	1
Practical Physics	2
Geology and Palæontology	3
Practical Geology	5
Mining	—
Practical Mineralogy	—

The number of individual students is 72, of whom 29 are Associates. The corresponding numbers last year up to the same date (31st December 1892), were 78, of whom 34 were Associates.

ANNUAL SCIENCE EXAMINATIONS.

The annual Science Examinations of the Department were held in the months of April, May, and June 1893. There were 924 entries in 23 subjects, the number of individual candidates being 459, of whom 359 presented themselves for examination.

The number of papers worked in each subject was as follows:—

Subject.		
I.	Practical Plane and Solid Geometry	70
II.	Machine Construction and Drawing	37
III.	Building Construction	11
IV.	Naval Architecture	1
V.	Mathematics (stages 1, 2, and 3)	203
V.	„ (stages 4 and 5)	—

MUSEUM.

The number of visitors to the Museum during the year was 1,328, as compared with 1,563 during the previous year.

Appendix G.

REPORT BY SECRETARY, ROYAL COLLEGE OF SCIENCE, DUBLIN.

LIBRARY.

The public are admitted under certain conditions to the library. The number of readers during the year was 5,341, as compared with 5,305 during the previous year. A third supplement of the library catalogue, being books received from 1872–92, has been completed.

EVENING LECTURES, SESSION 1892–93.

Professor Lyon, assisted by Mr. Taylor.—6 lectures on "Photography," delivered in January and February 1893. Average attendance, 64.

Professor Haddon.—6 lectures on "Anthropology," delivered in February and March 1893. Average attendance, 62.

Mr. H. Ramage.—6 lectures on "Chemistry and its Applications," delivered in January and February 1893. Average attendance, 38.

J. P. O'REILLY,
Secretary.

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

APPENDIX H.

REPORT of the DIRECTOR of the SCIENCE AND ART MUSEUM, DUBLIN.

To the SECRETARY OF THE SCIENCE AND ART DEPARTMENT.

Leinster House, Dublin,
4th January 1894.

SIR,

I HAVE the honour to submit, for the information of my Lords of the Committee of Council on Education, the following report on the Museum, the Royal Botanic Gardens, and the Metropolitan School of Art, for the year ending 31st December 1893. The report of the Council of Trustees of the National Library of Ireland will follow in due course as soon as it has been received in this office.

Although the past year has been an uneventful one, it is satisfactory to be able to state that owing to the staff of officers having been increased in 1892 a very large amount of much-needed work has been accomplished in the further arrangement of the specimens and the preparation of labels in all the Departments of the Museum. The acquisitions, both by donation and purchase, have been numerous and important, and the filling up of vacant spaces in the Museum progresses rapidly.

Changes in Staff.—There have been no changes in the staff of importance, save one referred to below in connexion with the National Library of Ireland.

Attendants.—The increased amount of leave given under the new regulations to the attendants, while it has had the effect of improving their position very materially, affects also the general question of the management of the Museum, and, but for the excellent service rendered by the police, there would be great difficulty in keeping the institutions open to the public for so long as they are at present.

Deputations.—During the year Mr. F. W. Moore was authorised to pay visits to several horticultural establishments and exhibitions in England and on the Continent, and Mr. McArdle to collect living plants required for the collection. Dr. Scharff visited London to examine some specimens and collections offered for sale, and Mr. Brenan, Head Master of the School of Art, paid his usual visit to see the exhibition of the National Competition Works at South Kensington. On several occasions during the year I visited London in connexion with the purchase of specimens and on other official business.

Technical Assistants.—The services of the gentlemen mentioned in last year's report were continued during a part of the year.

Publications.—There were no new guides nor any handbooks issued during the year, the stock in hand being sufficient for the present demand. A new issue of the Guide to the Botanic Gardens is, however, now required, and Mr. Moore has undertaken its preparation. In the Museum large numbers of special labels containing descriptive details were prepared, and many useful lists, notices, &c. were printed.

Workshops.—Much good work has been produced from the workshops, as the many excellent mounts and cases in different parts of the Museum testify; but, as has been pointed out, the present vote for fittings is inadequate to meet all the current requirements.

Electric Lighting.—The electric lighting has been maintained throughout the year in a state of efficiency. The extension of the installation to the Natural History Museum building and other parts of the premises will, I trust, be carried out during the present year.

The darkness in the book stores in the National Library on dull days, as it necessitates the use of artificial lights, can now only be efficiently met by means of storage of the electric current for use in the daytime, and to this matter the

attention of the Commissioners of the Board of Works has been drawn in connexion with the draft estimates.

New Offices.—The intended erection of a new theatre for the Royal Dublin Society, as it necessitates the existing block being taken down, has led to the erection of a new block of buildings for the accommodation of the officers of the Natural History Department. Though completed this building has not yet been handed over.

National Library of Ireland.—I attended the meetings of the Trustees of the National Library of Ireland, and have conveyed to my Lords the resolutions adopted at the several meetings. The only matter still pending refers to the appointment by the Trustees of Mr. R. Lloyd Praeger as successor to Mr. C. T. H. Wright, who resigned; the question which has been raised as to the issue of his Civil Service Certificate being not yet settled.

Royal Irish Academy Collections.—The Curator, Major MacEniry, has devised stands for the better exhibition of many of the specimens in this collection, and those portions already re-arranged by him present a much improved appearance. The services of Mr. Wakeman and Mr. George Coffey were continued during part of the year and the results of their labours have been printed for use in labelling and for convenience of record and future reference.

Major MacEniry reports as follows :—

" The following objects purchased during the year have been added to these collections:—

" A gold lunula with elaborate incised ornamentation, three fine torques of gold—three gold penannular ornaments, all found in 1849 near Athlone, and an unclosed ring of gold. Two silver torque rings found in co. Cork, three penannular objects and portion of armlet, of silver. A bronze curved trumpet, patinated and in perfect preservation found in Drumabort bog, co. Antrim in 1840. Two swords of bronze, one from Granard, co. Longford, the other (leaf shaped) found on the island of Valentia, co. Kerry. A bronze celt from co. Donegal. A crozier ferrule of bronze, richly patinated and enamelled, with intaglio interlacings, from Muckross Abbey, co. Kerry. A bronze decorated collar and drop of crozier head both found in Shankhill churchyard, co. Antrim. Bronze seal of the Abbey of the Holy Trinity of Loch Ce, co. Roscommon, founded A.D. 1215, and a bronze embossing die from Carrickfergus. An ancient iron quadrangular bell said to be from Clonmacnois and a unique iron ring and ferrule.

" Stone and flint implements, including two massive hammer-heads from Aughnacloy, co. Galway, and Dunshaughlin, co. Meath. A remarkable vessel of sandstone rudely formed and ornamented found in a bog at Drumbolin, co. Donegal.

" Four additional ebonised stands for the exhibition of bronze weapons and implements have been placed in the vertical glass cases; glazed wall presses have been provided for the pre-historic stone and flint objects. Portion of the Petrie collection of bronzes has been arranged in glazed horizontal cases.

" The coins and medals are being transferred to the cases specially constructed for their reception.

" The sepulchral and other earthern vessels and decorated floor-tiles from ancient Irish Ecclesiastical structures have been catalogued; the catalogue of this important portion of the Academy collection is now complete."

Geological Survey Collections.—The collections of the Geological Survey of Ireland have been further arranged and better displayed as is described in the following extract from a memorandum by Mr. McHenry, Geologist in charge:—

" Several large specimens were placed on pedestals, some of them having been cut and polished to show the internal structure.

" A series of (40) enlarged photographs illustrating the geological structure of interesting places in Ulster, presented by the Belfast Naturalist's Field Club, were framed and hung in the room.

" Progress has been made with the special hand-book to the Survey Collection. The portion of it which deals with the fossils is completed, and has been for some time in the hands of Mr. Watts who is to incorporate it with his part, which has special reference to the rocks; the present arrangement of them having been carried out by him previous to his transfer to London in April last.

"Two plans of the room, showing position of the cases and general arrangement of the collection, were prepared and hung at either end of the room; and reference numbers and letters attached to the cases, correspond to those in the plan.

"Revised labels were written for the rock collection and put with the specimens."

General Geological, Palæontological, and Mineralogical Collections.—In each of these sections important additions have been made. The Geological Collections have been further illustrated by some magnificent enlarged photographs of the Himalayan snowy range, and of scenes of geological interest in the north of Ireland.

The palæontological collections have been enriched by some fine specimens of *Plesiosaurus*, &c., from the neighbourhood of Peterboro'. Mr. Foord continues the arrangement of the invertebrate collections.

Some additional cases have been specially adapted for the better exhibition of portions of the mineral collection, and several important purchases and donations were made during the year.

Natural History Department.—No specially noteworthy changes have taken place in this Department, but particular attention may be drawn to the cases illustrative of the Geographical Distribution of Animals and the various questions connected with the descent and evolution of animals. The maps and descriptive labels which accompany the specimens in this section enable the student and visitor to obtain a graphic insight into some of the most important principles of modern biology.

Dr. Scharff, the Keeper of this Department, reports as follows:—

"The large increase in the donations of Zoological specimens this year and last, appears to me in a great measure due to the 'Irish Naturalist,' a publication which has already done much in spreading the taste for Natural History in Ireland. Some of the remote districts of Ireland have been more systematically explored this year by a committee liberally supplied with funds by the Royal Irish Academy, and most of the specimens found will be incorporated in the Natural History collection, and, it is to be hoped that soon a fairly complete series of the Irish land and marine animals can be exhibited in the Museum.

"One of the most valuable purchases made during the year is the collection of British Marine and Land Mollusca of the late Edward Waller. Its chief value lies in the fact that it contains a large number of rarities collected by the late Dr. Jeffreys, whose own valuable collection was unfortunately not secured by any British Museum, but went to America. The collection of Foreign Lepidoptera has been considerably enriched by purchases of many rare Indian species from Mr. Swinhoe, of Oxford, and a large series of Palæarctic shells has been bought in Berlin. A number of the larger mammals in the Museum have been replaced by better specimens, and a very fine female Eland has been added to the Geograpical Distribution collection. A large and valuable series of Plesiosaurus remains has also been purchased from Mr. Leeds, of Peterboro'.

"The collection of Injurious Insects is now completed, and the remainder of the cases in the upper gallery will be filled with a series of the various orders of insects, as soon as the removal of the Natural History staff to the new offices has taken place. It is to be regretted that neither the work of the renewal of the mammal stands nor alteration of the bird cases mentioned in previous reports has been commenced.

"I would strongly urge the importance of increasing the facilities for purchase of books, as the difficulty of obtaining the literature necessary for the determination of specimens increases every year. This want is keenly felt in the Museum."

Art and Industrial Department.—This Department of the Museum has lost a warm friend and generous donor by the death of the Duke of Leinster.

Considerable progress has been made in the arrangement of the General Art Collections, the principal want in which is additional casing and adaptation of the rather limited wall space for hanging frames, &c.

So far as possible the principle of classification by rooms and subjects decided upon originally is being adhered to.

The following is an extract from the report of the Keeper, Mr. T. H. Longfield:—

"During the past year a large number of additions have been made to this department of the Museum, among which may be specially mentioned the following:—

"*Pottery and Porcelain Collection.*—From the sale at Lord James Wandesforde Butler's mansion in Rutland Square: eight fine specimens of oriental porcelain

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

(Chinese and Japanese), a bust of King George II., confection dish of English porcelain (Plymouth), a Crown-Derby vase and a bust of the Madonna in lustre ware were procured; from the Riaño Collection of Spanish Pottery some fine pieces of lustre-ware were purchased. The other acquisitions include: a snuffbox of Dresden porcelain, a fine vase of Crown-Derby porcelain, two dishes of old Italian and Rhodian pottery, specimens of glass from Cyprus, two fine pieces of Wedgwood's agate ware.

"*Carved Wood and Ivory, &c. Collection.*—Group: the Crowning with Thorns, and a tazza on terminal stand with four heads, from Lord James Butler's sale; and a carved ivory devotional pendant, Flemish, 17th century.

"*Collections of Lace, Embroidery, and Textiles.*—Two interesting roundels of ancient tapestry from the Coptic tombs at Akhmim, Egypt; various specimens of lace, including a good specimen of Venetian point, 17th century.

"*Collection of Metal Work.*—Two panels of early 18th century French ironwork. Four articles of old Dutch brasswork.

"*Collection of Chinese and Japanese Enamels.*—Several fine pieces of cloisonné enamel work in vases, pastille burners, &c.; rare specimen of heraldic enamel (kettle on stand).

"*Collection of Musical Instruments.*—A set of Union bagpipes, and an interesting old Dublin-made piano. In this collection have also been placed the decorations and diplomas of the orders of the Légion d'Honneur and Carlo III., presented to Michael Balfe the composer, by the French and Spanish Governments, also a silver-gilt baton, presented to him by the inhabitants of Vienna, which have been given to the Museum by Mr. Max Rosenheim, of Belsize Park Gardens.

"*Collection of Arms.*—A richly decorated fowling-piece, English, 17th century (from Dr. Joly's collection), and a chased Kutar blade, purchased at Lord James Butler's sale.

"*Ethnographical Collections.*—The collections which have received additions are those from West Africa, Mashonaland, New Zealand, (a beautifully carved feather box from Lord James Butler's sale,) New Caledonia, New Guinea (kindly selected for us by Professor Haddon), and two collections of stone implements from North America and Tobago.

"*Reproductions.*—A collection of old Italian medals by Pisano, and others. Portion of the doorway of Bordeaux Cathedral. Tomb of the children of Charles VIII., at Tours, by Jean Juste. An interesting column from the Abbey of Souvigny, France. Group from the Loggia de'Lanzi, Florence, 'Judith and Holofernes,' by Donatello. Cistern, by Bernard Palissy (South Kensington Museum).

"*Furniture.*—A Marquetrie table and oriental coffer, from Lord James Butler's collection, and an arm-chair in the style of Chippendale.

"Among the principal donors to the Museum during the year have been his Grace the late Duke of Leinster, who always took a deep interest in this department of the Museum, which he has enriched with many choice gifts, and assisted with fine collections on loan. Mr. Max Rosenheim, of Belsize Park Gardens, who presented some highly interesting memorials of Michael Balfe (referred to above under the head of 'Collections of Musical Instruments'); Mr. Arthur Harricks, an upright pianoforte, early 19th century; and the Honourable Gerald Ponsonby, embroidered quilt and card counters.

"*Loans.*—Major Monck-Mason has lent an interesting collection of Indian metal work. The Trustees of the Domvile Estates, per Captain Poe, a fine over-door of old German wrought ironwork; Miss Chetwode, embroidered quilts (2) and purse; Mr. R. Ormsby Longfield, some good old miniatures (18th century). The silver-work, &c. lent by Mr. Robert Day, of Cork, has been returned to him.

"The following have been the principal works carried out during the year. The re-arrangement and classification of collections of Chinese and Japanese pottery and porcelain. Re-arrangement of several of the cases in the Ethnographical room and placing on exhibition in the new wall-cases specimens selected from store and from general collection, in this way showing separately the South American and Malagasy, the Andaman and Nicobar, and the Marocco collections. In each of the Ethnographical cases labels, indicating the localities, have been placed in prominent positions.

"A collection of copies of intaglio gems, with wax impressions, has been arranged in three table cases under west end of gallery in central court, also a collection of gems, presented by the late Duke of Leinster, has been similarly arranged in the Roman room.

"Miscellaneous specimens of embroidery have been arranged in cases under gallery of central court.

"A cast of an ancient cross at Kilkieran, co. Kilkenny (from moulds presented by the Royal Irish Academy), has been erected in the central court.

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

"The following casts have also been set up in the central court :—

Cast of a Buddhist Column (British Museum).
Recumbent figure 'Admiral Chabot' (Louvre, Paris).
Tomb of the children of Charles VIII. (Tours).
A font attributed to Jacopo della Quercia (Siena).
Judith and Holofernes, by Donatello (Florence).
Doorway from the Corso Magenta, Milan.
Niche from Pulpit (Siena).
Column, octagonal, from the Abbey of Souvigny, France.
Doorway from St. Maclou, Rouen.
Portion of Doorway in Bordeaux Cathedral.

"The following have been set up in the temporary passage between the two Museums :—

Reliefs from Hotel Bourgtheroulde, Rouen.

"The small casts of ivory and metal-work have been re-arranged and classified.
"The miscellaneous Irish Antiquities, bronze and stone implements, have also been re-arranged and classified.
"The copies of paintings in the Ajunta Caves have been placed on view adjacent to the colossal Buddha from Ceylon, and King Thebaw's kiosk."

Herbarium.—This division of the Museum is growing daily in importance. Some of the wall cases recently supplied are already arranged, and it is hoped that the Botanical Museum as well as the Herbarium will be found to add considerably to the number of persons in Ireland who take an active interest in Botany.

I think it desirable that some arrangement should be made by which Professor Johnson would be enabled to devote more time to the Museum. The following is an extract from his report :—

"During the past year considerable progress has been made in the arrangement of the various collections.
"Their utility and interest have been increasingly appreciated as indicated by the number of students and visitors who have made use of them.
"Wall-cases have been supplied to one-half of the Index Room, and it is hoped that during the coming year this room will be fully supplied with the necessary cases.
"A beginning has been made in the conversion of one of the rooms into a small timber museum. No doubt in time this room will prove itself of great value to those interested in forestry.
"Several valuable additions have been made to the Herbarium. Duplicates of British Flowering Plants have been presented by the Trustees of the British Museum, through W. Carruthers, Esq., F.R.S., the Keeper of Botany. In this way we hope to be able to complete our representation of the British Flora.
"Sets of plants illustrating the Flora of the North-east of Ireland by Stewart and Corry, and W. West's Report on the Frest-water Algae of the West of Ireland, have been acquired.
"Arrangements have been made for the acquisition of illustrative sets of Irish Flowering and other plants from various localities, as reported upon by systematists from time to time. No doubt the Herbarium will be considerably enriched by the presentation from the Royal Irish Academy, of sets of plants now being collected under the auspices of the Flora and Fauna Committee of the Royal Irish Academy.
"Several correspondents at different points on the Irish coast have sent collections of marine algae.
"Some valuable specimens have been presented to the Economic collections by the Director of the Royal Botanic Gardens, Kew; fruits, &c., including several fine Cycad cones, have been received from the Royal Botanic Gardens at Glasnevin.
"Some books, required for constant reference, have been purchased, many of the others have been supplied from the National Library."

Botanic Gardens, Glasnevin.—It is satisfactory to be able to state that notwithstanding the drought of the past year and the failure, for a time, of the Vartry water supply, no injury resulted to the Gardens except the indirect one that certain works had to be postponed owing to the amount of labour which had to be devoted daily to the drawing of water from the Tolka river by the staff of gardeners and labourers.

The Gardens, generally, are well equipped in every way, and in excellent order, save that the houses for succulent plants and tropical ferns have not

yet been sanctioned. The specimens belonging to these two groups can never flourish except in atmospheres adapted to their particular requirements which, in the absence of special houses, it is not possible to supply.

Mr. F. W. Moore, the Keeper of the Gardens, reports as follows:—

"*Conservatories.*—The conservatories are in good order, and with the exception of some slight repairs and painting, little need be done to them.

"No. I. Fern-house. The fern-house is in excellent order.

"No. II. Aquatic house. The wooden staging round the house requires to be renewed. The tanks are all in good order.

"*Curvilinear Grange.*—This range of conservatories is in good order, and nothing requires to be done. Many of the succulent plants in the cool end of the curvilinear range are in bad health, owing to the dampness of the atmosphere. There is no other accommodation available for them.

"No. VI. Orchid house requires to be painted, both inside and outside, and some renewal of the flagging will also be necessary.

"No. VII. Large Palm-house. Although it is only nine years since this house was erected some of the palms have reached the roof. Notably the large specimen of *Arenga saccharifera* in the centre of the house. The young leaves twice pushed their way out through the glass, I was, therefore, compelled to cut the growing point out, an operation which the plant will not survive for many years. Some young plants were given larger tubs, so that there will be no difficulty in filling its place when it becomes necessary to remove it altogether. All the plants are growing vigorously and well, and the house is getting somewhat crowded. I may state that as therere is no house for tropical ferns, both palms and ferns are cultivated in the large palm-house.

"No. VIII. Camellia house. The staging in the Camellia house was repaired, and it is now in good order.

"*Propagating Pits.*—Nothing is required in the Upper pit. Some repairs to doors and ventilators will be necessary in the Lower pit.

"*Stable Range.*—Pits Nos. 1 and 2 require to be painted both inside and outside. The other pits are in a satisfactory condition.

"*Outside.*—Several important works and changes were effected in the outdoor department during 1893. The new Fernery is now almost completely planted. E. J. Lowe, Esq., of Chepstow, presented 86 plants of rare and fine varieties of ferns, many of which existed only in his collection. A valuable contribution was also received from Mr. P. Neill Fraser, of Edinburgh, and 52 varieties from the Bristol and Clifton Zoological Gardens. Other varieties were purchased, so that the Glasnevin collection of hardy ferns is now one of the best public ones in existence. All the varieties are growing well in the new Fernery.

"Many of the old walks in the garden had no foundations and consequently got very soft in wet weather. These are being gradually remade with stones and gravel from the sand-pit in the garden. The large space at front of entrance gate was entirely remade, as it had got very much out of repair.

"Owing to the amount of lime in the soil at Glasnevin plants belonging to the Heath-tribe, only succeed when planted in carefully made and prepared beds. Some of the large beds of Rhododendrons, and hardy Azaleas, near the pond were failing. In the spring they were thoroughly renewed with suitable compost, and some additional varieties were purchased to make good any deficiencies. They made good growth during the past season, and now look healthy and well.

"The new varieties of hardy water-lilies formed a very attractive feature in the tanks which were constructed outside the Aquatic-house. They proved to be quite hardy, and flowered freely. Some of them grew so much that they quite filled the tanks, and portions had to be taken off them and planted in the pond, where they continued to thrive, and flowered.

"The collection of species of *Lilium* in the enclosed garden were all lifted, and the beds in which they are cultivated were re-made with fresh materials. Many additional species were purchased and added to the collection.

"The exceptionally dry season did not permanently injure any plants, although it caused much extra labour. Owing to the failure of the Vartry, the usual supply of water to the garden was curtailed, and all required for out-door work had to be drawn from the river, and as many groups of plants had to be watered daily the time and labour involved seriously interfered with other work.

"*Arboretum.*—The work of re-organising the arboretum is being rapidly pushed forward. Space is getting so limited that duplicate trees have to be removed wherever possible. Two elms, two pines, and other smaller trees were removed in 1893. The old trees which are to remain were cleaned, dead boughs cut out, and ivy removed. Some young plants of the *Pyrus* group which had been prepared in

the nursery-ground were moved out to their classes. Numerous additional species were purchased wherever obtainable. All the ground which had to be broken up and tilled, is now permanently laid down in grass, and most of it will be planted next year.

"*Botanical Arrangements.*—The number of students studying in the gardens seems to increase yearly, and the arrangements were largely made use of.

"*Purchase of Plants and Seeds.*—Many rare plants were purchased. I visited most of the leading establishments in Belgium, Holland, and London, and found many interesting plants which were not catalogued, most of which I was able to purchase at reasonable rates. I now desire to thank the proprietors of the various establishments for their generosity and consideration. Plants were purchased in Belgium, Brazil, France, Germany, Holland, Italy, and the United States, as well as in the various British plant nurseries.

Number of plants purchased, 982.

	£	s.	d.
Orchids, ferns, palms, and indoor plants - -	216	3	7
Hardy plants, trees, and shrubs - - -	70	4	4
Seeds, bulbs for pots and beds, &c. - - -	28	10	5
Total - - - -	314	18	4

In 1892, 1,060 plants were purchased, the following amounts being expended:—

	£	s.	d.
Orchids, ferns, palms, and indoor plants - -	198	1	11
Hardy plants, trees, and shrubs - - -	32	15	9
Seeds, bulbs for pots and beds, &c. - -	29	10	11
Total - - - -	260	8	7

"The following are some rare plants purchased:—

"*Angræcum Fournierianum, Alsophila crinita, A. Malzinei, Alocasia Watsoni, Ananas cochinchinensis, Aerides Hughii, Adiantum manuatum, A. Birkenheadii, Coryanthes Wolfiana, Cyathea polyoneuron, Cypripedium Charlesworthii, Cattleya Skinneri alba, Calamus grandis, Colchicum Bornmulleri, Cyathea Beyrichiana, Epidendrum Randii, Euphorbia Commelinii, Eulophiella Elisabethæ, Geonoma acaulis, Impatiens mirabilis, Lissochilus giganteus, Marattia Mooreana, Nepenthes bicalcarata, N. mixta, Nidularium carcharodon, Prunus alleghenensis, Pandanus discolor, Rhododendron campylocarpum album, Selaginella texta, Tillandsia fasciculata, Todea Mooreana, Vriesia Quintusiana.*

"*Exchange of Plants and Seeds.*—As I have already mentioned, I received very valuable collections of ferns from E. J. Lowe, Esq., Chepstow; P. Neill Fraser, Esq., Edinburgh; and from the management of the Bristol and Clifton Zoological Gardens. It is impossible to overestimate the importance of Mr. Lowe's contributions, and the valuable assistance rendered by him in enabling me to obtain ferns from other sources. W. E. Gumbleton, Esq., very generously purchased and presented to the Garden Library a rare work '*Tussac's Flore des Antilles*' in four volumes, and he also presented 'Hooker's Exotic Flora,' three volumes, complete. These works are very valuable.

"While in Belgium and Holland in the spring I obtained many rare plants from M. Linden of Brussels, M. Lubbers of the Botanic Gardens, Bruxelles, M. Witte of the Botanic Gardens, Leiden, and C. S. van Tubergen, jun., of Haarlem. I also wish, gratefully, to acknowledge the valuable assistance received from Messrs. James Veitch and Sons, F. Sander & Co., Hugh Low & Co., T. Smith, Newry; Messrs. Charlesworth, Shuttleworth & Co., Herr Wilhelm Pfitzer, as well as from the following private growers:—Thos. Acton, Esq., D.L., J.P., Baron Schröder, Major-General Berkeley, J. T. Poe, Esq., E. H. Woodall, Esq., W. E. Gumbleton, Esq., J.P. From the Director of the Royal Gardens, Kew, I received many interesting plants and seeds, and collections of seeds of native plants from Surgeon-General King, M.D., Calcutta, and the Director, Botanical Department, Jamaica.

"The number of donations received was 128, the number of donors 86, residing in the following countries:—England, 25; Ireland, 18; Germany, 11; Scotland, 6; Belgium, 4; Holland, 3; France, 3; Italy, 3; Austria, 2; India, 2; Hungary, 1; Switzerland, 1; Australia, 1; New Zealand, 1; Tasmania, 1; Jamaica, 1; Japan, 1; Servia, 1; Russia, 1.

Donations to Garden.

Plants - - - -	1,186
Seeds - - - -	1,638 packets.

Donations from Garden.

Plants - - - -	1,297
Seeds - - - -	3,442 packets.

"Large collections of plants were sent to the Botanic Gardens at Kew, Glasgow, and Cambridge.

"The following are some of the rare plants received in exchange:—*Asplenium marginatum, Adiantum asarifolium, Asarum macranthum, Amorphophallus rex, Anthurium macrolobum, Acriopsis javanica, Bulbophyllum Hamelini, B. O'Brienianum, B. reticulatum, Buddleia Colvillei, Calamus callipis, Cycas Seemannii, Cirrhopetalum vaginatum, Crinum fimbriatum, Ixianthes retzioides, Kalanchoe marmorata, Kniphofia pauciflora, Lycopodium hippuris, L. strictum, Lilium Henreyi, Lockhardia Oerstedii, Masdevallia bogotensis, M. elephanticeps, M. fragrans, M. striatella, M. chimæra var., Shieldsiana, Myrmecodia Beccari, Pleurothallis rhombipetala, P. teretifolius, Phalaenopsis tetraspis, Pachypodium Saundersii, Pæonia flavescens, Pitcairnia Funckiana, Ptychoraphis augusta, Rosa chlorocarpa, Stanhopea Amesiana, S. Lowii, Stapelia gigantea, Sarcopodium macranthum, Turnera aurantiaca, Thrinax Morrisii, Zamia montana.*

"*Journeys.*—By kind permission of the Department I attended the quinquennial International Show at Ghent, and afterwards visited the principal gardens and plant establishments, in Belgium, Holland, and London. The results of this journey were most satisfactory.

"*Musical Promenades.*—These were discontinued during the past year.

"*General.*—Several new works were purchased and added to the Library, which is now a very fair reference Library.

"The Laboratory continues to be used by students and others interested in botanical research, and Professor Johnson reports that he has found it of great assistance to him in his teaching. A commencement in independent work and original research has also been made, as Miss Hensman has been working steadily at investigations in the Irish Marine Algae, and I sincerely hope that others will follow Miss Hensman's example. Two Belfast students, applied for, and obtained permission to work in the Laboratory during the summer months.

"No new works of any importance were granted for 1893. I am, therefore, compelled again to urge the absolute necessity which exists for the two items so often applied for—

I. A house for succulent plants.
II. A house for tropical ferns."

Metropolitan School of Art.—The following extract from the Report by the Head Master gives full details of the working of the school and the successes obtained by the students during the past year.

The general attendance has been decidedly better than in 1892, and we may look forward as the result to still higher successes in 1894 than those which are now recorded.

I regret that the arrangements which were made in the hope of a number of lithographers attending the classes of this School, in connection with the Technical School of the City of Dublin, have not been taken advantage of by those for whom they were made.

It is expected that the lectures on Architecture to be delivered by Professor Drew, in the evening, will be well attended and will justify the new arrangement which has been made as to the time of their delivery. The lectures delivered by Professor Fraser on Anatomy have been followed by successes, including one Queen's Prize, by several students in that subject.

"I am pleased to report a considerable improvement in the results of the last examinations. This, no doubt, is owing to the institution of the 'Local Prize Scheme'; without such a stimulus the efficiency of the School could not, I believe, be maintained. It also enables us to hold a public distribution of prizes. The interest evinced in the proceedings at the distribution, which is presided over by his Excellency the Lord Lieutenant, has always been most helpful to the School. I trust that we have now reached a period of comparative quiet as regards any further

changes in the arrangement of the subjects for examination; no doubt such changes are necessary, and ultimately beneficial, but they exercise at first a disturbing influence on the work of the School.

"The total number of students in attendance has been 459. Of this number 217 attended the day classes and 242 the evening classes.

"The total amount of fees was 539*l.* 8*s.* 6*d.* The day classes contributed 447*l.* 12*s.* 6*d.*, and the evening classes 91*l.* 16*s.*

"The claim for payments on results amounted to 394*l.* 2*s.*, being an increase of 92*l.* 2*s.* over last year.

"The total number of works sent to South Kensington for examination was 719.

"The following numbers give the results of the Elementary drawing certificate examinations:—

Freehand drawing	72
Geometrical "	27
Model "	59
Perspective	30

"The increase in the number of successful students was 26; and the total number of 'First Classes' in the three subjects of Freehand, Perspective, and Model drawing was 76, being an increase of 38 over the number obtained last year.

"A new subject, 'Elementary Shading from the Cast,' was introduced this year. The successes gained were 30, of these seven were "First Class."

"In the 'Advanced Art Examinations' the results were as follows:—

Shading models	11
Antique from memory	9
Anatomy	5
Drawing from life	8
Drawing from antique	15
Painting still life	5
Painting monochrome	3
Figure design (honours)	1
Principles of ornament	13
Shading from the cast	22
Ornament in outline	37

"The mark 'Excellent' was gained by W. H. Orpen for shading models and drawing from the antique. It was also gained by Miss L. Taylor Coffey and H. Kelly for anatomy. The number of 'First Classes' was 62, being 11 more than last year.

"The total number of works accepted for certificates was 76. For Group I., seven works; for Group II., two works; and for Group III., six works were accepted, these being for Art Master's Certificates. For the Art Class Teacher's Certificate 61 works were accepted.

"The results of the Modelling examinations were as follows:—Elementary Modelling, 7, six of these being '1st class'; Modelling Design, 1; Modelling from the Antique, 1. The fact that the students must now cast their examination works for transmission to London has had rather a deterrent effect on the numbers presenting themselves for examination, but doubtless this difficulty will gradually disappear.

"The Science Classes continue to be well attended. The results in Building Construction and Machine Drawing were disappointing; but the Descriptive Geometry shows a great improvement, and proves that students are becoming more alive to the value of the study of this subject. The highest mark obtainable in the Elementary Stage is 'Pass,' and this year the students gained 16 passes as well as one '1st class' and three '2nd class' 'Advanced'; being a total of 20 as compared with 10 last year. It is remarkable that 14 of these successes, including all the advanced, were gained by students of the ladies' class. In Building Construction two students were successful.

"Nine book prizes for 'sets of works' were awarded. This is a new arrangement and promises to work well; as these prizes are given, not for a particular work, but for the works of the entire session.

"In the National Competition the school received two silver medals, one bronze medal, and five book prizes. This is a great improvement on last year's results in this competition. In addition to the foregoing a 'Queen's Prize' for Anatomy was gained by Miss Taylor Coffey. There were only two given for this subject to students of Schools of Art in the United Kingdom, and this school succeeded in obtaining one.

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

"The school was successful in winning two out of the 20 local Scholarships offered for general competition this year. Mr. W. H. Orpen gained ninth place, and Mr. W. Early fourteenth place in the competition. The latter student having received an appointment as designer and draughtsman to a firm in Dublin, between the date of the competition and the declaration of the result had to resign his Scholarship.

"The number of students who gain prizes under the local prize scheme, and the subjects in which they are awarded, are as follows:—

Geometrical drawing	17
Advanced model drawing	1
Anatomy	2
Drawing from antique	1
Building construction	1
Elementary model drawing	32
Elementary freehand	29
Elementary modelling	6
Principles of ornament	3
Perspective	15
For sets of works	17

"Seventeen Free Studentships were awarded to students provided they were qualified according to the rules of the Science and Art Directory. The successful students are A. Crowe, T. Hamilton, J. Saunders, C. Perrott, E. Wilkinson, and W. L. Whelan.

"The following students were recommended for the Scholarships of 10*l.* each granted by the Royal Dublin Society. Ida Carnegie, Lydia M. Taylor-Coffey, Mary McCheane, Henry J. Donnelly, and James McGrath.

"A course of 20 lectures on Anatomy was delivered by Professor A. Fraser, M.D., in the afternoons; it was attended by 51 students. Ten of these lectures were illustrated by demonstrations on the living model. Prof. Fraser has succeeded in his endeavours to make this course one which deals with the special wants of the Art student. Out of eight students who presented themselves for examination in this subject five were successful; two obtaining the mark 'Excellent.'

"A course of lectures on Architecture was given by Sir Thomas Deane, R.H.A., and was attended by 22 students.

"Considerable changes have been made in the competition for the Taylor Scholarship and prizes. Modelling has for the first time been admitted, and the candidates for Scholarships are now required to submit to a time examination in Modelling and Painting. Two of our students were selected for the Modelling, and three for the Painting competition. In the final award Miss G. Stoney received a prize of 30*l.* for a painting, and Misses Gibton and Fleming prizes of 10*l.* and 5*l.* respectively for modelled figures.

"A selection of students' works made to illustrate the course of instruction in the School was lent to the Bray Industrial Exhibition.

"A water-colour drawing made Miss I. Carnegie of the "Old house of Lords" in the Bank of Ireland was purchased by Lord Powerscourt.

"A competition for three free-studentships for modellers, open to the Schools of Art in Ireland, was held in the month of July. There were no competitors from the provincial schools, it was therefore confined to students of this school. The successful candidates were Misses Fleming, Gibton, and O'Clery.

"Miss Fleming was selected to attend the summer course of Art instruction at South Kensington, and made some modelled studies in the Museum.

"The exhibition at Chicago gave an impetus to the demand for lace and embroidery designs. Some of the work executed from designs by students was exhibited at Carlton Gardens, London, and met with approval, particularly a counterpane which was worked in the Co. Roscommon from a design by Miss Jacob. The convent at Armagh purchased some designs. The Countess of Aberdeen ordered designs for deep and narrow flounces. Designs were also purchased by the Bath and Shirley Lace School, Carrickmacross, &c.

"In the competition for lace and embroidery designs, held in connexion with the Horse Show in August, six students were successful in winning 15 prizes for lace, embroidery, wood carving and ironwork. Ten of these were first prizes.

"The exhibition of students' works was held at Christmas, and was attended by 8,368 visitors.

"The students' sketching class makes satisfactory progress. In addition to the usual monthly exhibitions, an exhibition of the works executed during the summer vacation took place in the School. A selection from the sketches will be made for the public exhibition of students' works at Christmas.

"The landscape class met as usual during the months of June and July. Some advanced students having expressed a desire to extend their sketching ground, a section of the class was taken to Howth under my superintendence. The remaining

I have to thank my assistants for the valuable aid they have given me in the conduct of the school.

ATTENDANCE OF THE PUBLIC.

In the following tables the usual details of the attendances by the public at the Museum and Botanic Gardens will be found.

The total attendance in the Museum is in excess of that of the previous year (1892), by about 24,000, and the daily average has been upwards of 1,000. In the case of the Botanic Gardens there has been an increase by about 33,000. The total figures are the highest ever recorded.

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

With regard to Sunday attendance, the weather is a somewhat important factor, and it is probably due to the dry and generally fine season that while the attendance in the Museum was less on Sundays, that in the Gardens was much greater than in the preceding year.

The average Sunday attendance was respectively—

Museum - - - - - -	979·
Botanic Gardens - - - - -	5386·5
Total - - - - -	6365·5

The total Sunday attendance at the Botanic Gardens, it may be observed, is more than double the week-day attendance. The numbers being respectively 285,487 and 124,441.

The highest and lowest attendances on Sundays were—
Museum, highest, 25th February, 2,022.
„ lowest, 14th January, 280.
Botanic Gardens, highest, 18th June, 9,170.
„ „ lowest, 30th December, 27.

The highest and lowest attendances on week-days were—
Museum, highest, 24th August, 3,794.
„ lowest, 12th April, 380.
Botanic Gardens, highest, 3rd April, 9,400.
„ „ lowest, 9th January, 9.

The total of attendances at the Metropolitan School of Art exceeded those of 1892 by over 2,300, the average daily attendance being considerably better.

The attendances in the National Library were about 19,000 less than in 1892, this may in part be explained by a stricter working of the self-recording turnstiles, probably the fineness of the year may have had something to do with it too. The daily average was 388·7.

As will be seen in Table III., the daily average number of visitors and students to the four institutions, when all were open together, was 2662·1 or 110 more than in 1892.

This steady increase in the numbers attending these institutions is encouraging to those immediately engaged in their management, and I trust this record of the results of last year's work will be deemed satisfactory by my Lords.

(Signed) V. BALL, C.B., LL.D., F.R.S.,
Director, Science and Art Museum.

APPENDIX TO DR. BALL'S REPORT.

The DONATIONS to the ART INDUSTRIAL DEPARTMENT for the Year 1893 are :

Dr. V. Ball, C.B., F.R.S., Director.
Bronze medal of the Paris Exhibition, 1889.
Trustees of the British Museum.
Eighteen fac-similes of drawings, Flemish, English, &c., Schools.
Dr. T. Beard.
Photographs (2) of Grès de Flandres jug.
R. Clark, Esq.
Florin of Queen Victoria, 1849.
Sir Thomas N. Deane, R.H.A.
Old Spanish bottle of pottery found on Sherkin Island.
Charles Davis, Esq.
Catalogue of the Spitzer Collection of Art Objects.
Mrs. Fishe.
Trumpet used by Llamas of Thibet.
J. R. Hickson, Esq.
Collection of Ethnographical specimens from Zululand.

DONATIONS TO THE ART AND INDUSTRIAL DEPARTMENT—*cont.*

Arthur S. Harricks, Esq.
Piano, English. Early 19th century.

T. H. Longfield, Esq., F.S.A.
Chromo-lithograph. Japanese God of Medicine.
Photographs (2) of pen drawing of Ancient Irish Cinerary Urn and Food Vessel.
Eight engravings of medals.
Photo-lithograph of pen drawing. Part of interior of Cormac's Chapel, Cashel.
Coloured etching of doorway, St. Maclou's Church, Rouen.
Engraving. A Llama's devil-dance.
Do. Miss Kate McDonald performing on the Clarsach.
Do. Mound-builders' pottery from Missouri.
Do. Mound-builders' pottery from Arkansas and Florida.

His Grace the Duke of Leinster.
Work-box decorated with panels of figure subjects in dyed straw appliqué. Swiss.
Picture-frame, carved wood, gilt.

Robert Ormsby Longfield, Esq.
Engraving. Toupapow with a corpse on it, attended by the chief mourner in his habit of ceremony. (Tahiti).

Wm. J. McMurray, Esq.
"Lion" shilling of George IV.

Miss Mayne.
Miniature of an Indian Begum, mounted in gold as a brooch.

N. J. MacWalter, Esq.
Halfpenny of William and Mary.

Kenneth McAlpine Nicholson, Esq., late J.P., H.M. Indian Service.
Photograph of monument to Brigadier-General Nicholson, C.B., in Lisburn Cathedral.
Brass dish, enamelled. Indian Empire.

Wm. E. Phelps, Esq.
Steel die formerly used in Stamps and Taxes Office.

Hon. Gerald Ponsonby.
Four card counters dated 1788.
Embroidered quilt, coloured silks on linen. Irish.

J. G. Robertson, Esq.
Photograph of old Irish spinning-wheel.

M. Augustin Rischgitz.
Photograph of the "Dudley" Raphael—The Crucifixion.

(3.) Interior of St. Patrick's Cathedral, Dublin. 1815.
(4.) Plan of do. do. 1818.
(5.) Do. do. do. 1815.
(6.) View (exterior) of St. Patrick's Cathedral, Dublin, (restored) by Gribble.
(7.) View (exterior) of St. Patrick's Cathedral, Dublin, by Miller, 1810.
Mrs. Stack.
Old sampler for lacework (Point coupé).

LIST OF DONATIONS FOR 1893.

NATURAL HISTORY DEPARTMENT.

Alexander, Col. W. J.
IRISH HARE, var. (*Lepus variabilis*), Pall. from Donabate.
Atkins, A. B., Esq.
Plusia bractea from Templemore.
Academy, Royal Irish.
BARN OWL (*Aluco flammeus*, L.) from Cavan.
Spongilla, sp. ? from Cavan.
Collection of INSECTS from cos. Donegal, Dublin, and Kerry.

DONATIONS TO THE NATURAL HISTORY DEPARTMENT—*cont.*

Burbidge, F. W., Esq.
Testacella scutulum, Sow.
Blake-Knox, H., Esq.
WILD DUCK (*Anas boschas*, L.) from co. Wicklow.
Nest and Clutch of Eggs of ROOK (*Corvus frugilegus*, L.) from co. Wicklow.
Nest and Clutch of Eggs of HOODED CROW (*Corvus cornix*, L.) from co. Wicklow.
Nest and Clutch of Eggs of JACKDAW (*Corvus monedula*, L.) from co. Wicklow.
Nest and Clutch of Eggs of MISTLE THRUSH (*Turdus viscivorus*, L.) from co. Wicklow.
Nest and Clutch of Eggs of MAGPIE (*Pica rustica*, Scop.) from co. Wicklow.
Nest and Clutch of Eggs of RING DOVE (*Columba palumbus*, L.) from co. Wicklow.
Barrett-Hamilton, G. E. H., Esq.
BLACK RAT (*Mus rattus*) from Waterford.
Sirex gigas from Woodenbridge.
British Museum (Trustees of).
"Catalogue of British ECHINODERMS in the British Museum."
"Catalogue of LEPIDOPTERA HETEROPTERA in British Museum." IX.
Catalogue of SNAKES in British Museum. Vol. I.
Catalogue of BIRDS in British Museum. Vol. XXI.
Catalogue of MADREPORIAN CORALS in British Museum. Vol. I.
Barrington, R. M., Esq.
Collection of WASPS from Bray.
SEDGE WARBLER (4), (*Acrocephalus schænobænus*, L.).
WHITETHROAT (2) (*Sylvia rufa*, B.) from Maidens Rock.
TURTLE DOVE from Hook Tower.
Boshell, W., Jnr.
Collection of INSECTS from Dublin.
Scyllium canicula from Dublin Bay.
Ball, Dr. C.B.
LAMPREY (*Petromyzon marinus*, L.) from River Corrib, Galway.
Ball, Dr. V.
PUFFIN (young) (*Fratercula arctica*, L.) from co. Antrim.
Brady, Sir T.
Melolontha vulgaris from Wexford.
WRECK FISH (*Polyprion cernium*, V.) (2) from coast of co. Cork.
Battersby, Major T. P. (R.A.).
Collection of GEOLOGICAL DEPOSITS from Barbadoes.
Battersby, Mrs.
Melithea artemis (7) var. *hibernica*.
Browne, J. M., Esq.
LAND SHELLS from Inishbofin, co. Galway.
IRISH RAT (*Mus decumanus*, var. *hibernicus*) from co. Dublin.
Colgan, D. F. P., Esq.
YOUNG ROOKS (*Corvus frugilegus*) from Bagnalstown.
Cooper, Col.
LUMPSUCKER (*Cyclopterus lumpus*) from Sligo Bay.
Dolomedes fimbriatus from Sligo.
Connolly, Dr. R. W.
Shed Skin of PUFF ADDER, (*Vipera arietans*) from W. Africa.
Cuthbert, Miss A. Gore.
Collection of LAND SHELLS from North Coast of Spain.
Cuthbert, H. K. Gore, Esq.
Collection of INSECTS from Courtown and Spain.
Corless, T., Esq.
OYSTER (*Ostrea edulis*, L.) from co. Galway.
Cree, Dr. J.
A few INSECTS from S. America, &c.
Campbell, D. C., Esq.
Collection of INSECTS from Madras.

Appendix H.

REPORT BY DIRECTOR, DUBLIN MUSEUM.

DONATIONS TO THE NATURAL HISTORY DEPARTMENT—*cont.*

Carpenter, G. H., Esq.
Collection of INSECTS and SPIDERS from cos. Dublin and Wicklow.
Creighton, Dr. R. H.
MICRO-PHOTOGRAPHS of Irish ENTOMOSTRACA.
FRESHWATER SPONGE (*Spongilla lacustris*, L.) from Ballyshannon.
Dollfus, A., Esq.
Collection of TERRESTRIAL ISOPODS (chiefly European).
Digger, H. Esq.
Larva of MELOLONTHA from Dundrum.
Druitt, C. F., Esq.
MEADOW PIPIT (*Anthus pratensis*) from Carrick-on-Suir.
Driscoll, J., Esq.
WRECK FISH (*Polyprion cernium*) from Courtmacsherry.
Farran, G. P., Esq.
Cidaria truncata, var, from Templeogue.
Frazer, Dr.
Nest of *Vespa norvegica*.
Foyle and Bann Fisheries.
SALMON GRILSE from Londonderry.
Gray, Miss Grace.
Nest of *Vespa norvegica* from co. Armagh.
Greene, T., Esq.
LARVÆ, PUPÆ and wood injured by *Cossus ligniperda* from Mageney.
Chærocampa porcellus from Mageney.
Echinomyia grossa, L. and a few PUPÆ OF VANESSA URTICÆ, from Mageney.
FRESHWATER SPONGE (*Spongilla fluviatilis*, Johnst.), from Mageney.
Glascott, Miss L. S.
Collection of DRAGON FLIES from New Ross.
Gleeson, P., Esq.
Collection of INSECTS and Nest of *Vespa rufa* from Tipperary.
Harvey, Mrs.
MEALY REDPOLL (*Linota linaria*, L.) from Achill Island.
Haddon, Prof. A. C.
SKULL of inhabitant of Torres Straits.
Collection of PYCNOGONIDÆ from Torres Straits.
Collection of PYCNOGONIDÆ from West Coast of Ireland.
Collection of CRUSTACEA from Pacific Ocean.
Halbert, J. N., Esq.
Collection of INSECTS and SPIDERS from cos. Dublin and Wicklow.
Hooper, W., Esq.
Andrena cineraria, L. from Rostrevor.
Hodgson, E., Esq.
GREY WAGTAIL (*Motacilla sulphurea*, Bechst.) from co. Galway.
Hardy, J. R., Esq.
Collection of COLEOPTERA from Portsalon, co. Donegal.
Henderson, —, Esq.
Hylobius abietis with injured Pine-shoots from Tullamore.
Hamilton, J. C., Esq.
Sygnathus acus, L. var. and Crustacea from Donegal Bay.
Johnson, Rev. W. F.
Collection of SPIDERS from Armagh and Ardara.
Collection of SPIDERS from Ballyshannon, &c.
Small Collection of MARINE SHELLS from Donegal Bay.
Jameson, H. L., Esq.
Timarcha tenebricosa, Fab. from co. Waterford.
Collection of INSECTS from Kilincoole.
LONG-EARED BAT (*Plecotus auritus*, L.) from co. Armagh.
DAUBENTON'S BAT (*Vespertilio daubentoni*, L.) from Staffordshire.
Kelsall, Miss.
Collection of INSECTS from Blackrock.
Kane, W. F. de V., Esq.
HORSE LEECH (*Hæmopis vorax*, W.).
PUFFIN from Monaghan.
Anodonta cygnea, L. from Lough Erne.
Collection of INSECTS and SPIDERS from Kenmare.
Collection of INSECTS and SPIDERS from Sligo.
Collection of INSECTS and SPIDERS from Roscommon and Loughrea.

DONATIONS TO THE NATURAL HISTORY DEPARTMENT—*cont.*

Kennedy, Wm., Esq.
Helix arbustorum from co. Leitrim.
Clausilia laminata, Mont; *Buliminus obscurus*, Müll; *Helix lamellata*, J. from co. Sligo.

Low, G., Esq.
Collection of INSECTS from Dundrum.

Leeper, R. J., Esq.
Skin of DUCK BILLED PLATYPUS (*Ornithorhynchus anatinus*, Shaw) from Australia.

Marsden, H. W., Esq.
Collection of LEPIDOPTERA from Canaries.

Milne, J. N., Esq.
Unio margaritifer from Newtownstewart.

Moore, F. W., Esq.
Tropicoris rufipes from Killucan.

Moore, R. L., Esq.
SALMON TROUT (*Salmo trutta*) from River Erne, Belleek.

Manchester Museum (Trustees of).
"Outline Classification of the Animal Kingdom."
"Catalogue of Type Fossils in Manchester Museum."

Marshall, J. T., Esq.
Some rare BRITISH MARINE SHELLS.

McWeeney, Dr. E. J.
Nepa cinerea from co. Wicklow.

M'Combie, Capt., T. G. F.
PARASITIC CRUSTACEA (*Cecrops latreillei*, Leach.). South West Coast of Ireland.

McKinlay, Dr. A.
SKULL of *Sus verrucosus*, Boie and three BIRD SKINS from N. E. Borneo.

Neale, F., Esq.
Small collection of EXOTIC INSECTS.
Nonagria arundinis from Limerick.

Newburgh, A. R. C., Esq.
CODFISH (*Gadus morrhua*, L.) var. from Bantry Bay.
Acherontia atropos from Glengariff.

Nichols, A. R., Esq.
Collection of INSECTS, SPIDERS, &c., from co. Cavan.

O'Connell, J., Esq.
TAPEWORM (*Tænia undulata*, Rud.), Kilkenny.

O'Hara, Col.
LESSER SHREW (*Sorex pygmæus*, L.) from Kilkenny.

Phillips R. A., Esq.
Collections of FRESHWATER SHELLS from co. Cork.
Epeira diademata from Skibbereen.

Parker, Anthony, Esq.
GARDEN WARBLER (*Sylvia salicaria*, L.) from co. Tipperary.

Pilkington, R. G., Esq.
LONG-EARED OWL (*Asio otus*, L.) from co. Wicklow.

Richardson, H., Esq.
POCHARD (*Fuligula ferina*, L.) from co. Kildare.
OTTER (*Lutra vulgaris*, Erxl.) from co. Carlow.
GOLDEN-EYE DUCK (*Clangula glaucion*, L.) from co. Carlow.

athborne, H. B., Esq.
Two WAXWINGS (*Ampelis garrulus*, L.) from Norfolk.
MOLE (*Talpa europæa*), Cambridge.
SHREW (*Sorex*, sp.), Cambridge.
Collection of INSECTS from Dunsink.
SCORPION (*Isometrus maculatus*, De G.) and CENTIPEDE (*Scolopendra sp.*), Trinidad.
Collection of SNAKES from Trinidad.

Royal Dublin Society.
"FOSSIL FISH, Remains of Coal Measures of British Islands. Pt. 1.
"ACTINIÆ from Torres Straits." Pt. I. Zoantheæ.

Robertson, J. G., Esq.
MAGPIE (*Pica rustica*, Scop.) from Dublin.

Appendix H.
REPORT BY DIRECTOR, DUBLIN MUSEUM.

DONATIONS TO THE NATURAL HISTORY DEPARTMENT—*cont.*

Reynell, Miss.
  Collection of LEPIDOPTERA from Killucan, co. Westmeath.
Stockley, Lt.-Col., A. P. D.
  Clutch of Eggs of NIGHTINGALE from Kent.
Scharff, Dr. R. F.
  "Report on FISHES from S.W. Ireland."
  "Distribution of the IRISH LAND and FRESHWATER MOLLUSCA."
  "A SUCKING FISH (*Liparis vulgaris*) new to Ireland."
  Unio margaritifer from co. Wicklow.
  Collection of INSECTS and SPIDERS from Castletown-Berehaven.
  Collection of INSECTS and SPIDERS from cos. Dublin and Wicklow.
Stuart, Rev. A. S.
  Collection of SPIDERS from Bogay, co. Donegal.
Shackleton, R. A., Esq.
  Goliathus two specimens from Lower Congo.
Saunders, E., Esq.
  Collection of *Hemiptera* from England.
Soden, Capt.
  Scorpio roeseli from Lukoja.
Stewart-Moore, Miss.
  CATERPILLAR of *Odontopera bidentata* from co. Antrim.
Secretary of State for India.
  "Illustration of ZOOLOGY, H.M.S. 'Investigator.' Part 1."
Thompson, Prof. D'A. W.
  SPIDERS from Scotland and Ireland.
  Chætonymphon hirtipes, Bill. from Davis Straits.
  Boreonymphon robustum.
  Amphioxus bassinus from Bass' Straits.
Trumbull, J. (L.R.C.S.).
  EARTHWORMS from Malahide and co. Clare.
  Nest of WILLOW WREN containing clutch of Eggs and one Cuckoo's from Malahide.
Templer, J. C., Esq.
  Young stuffed OTTER (*Lutra vulgaris*), from co. Armagh.
Taylor, J. W., Esq.
  Helix granulata, Alder from England.
Tomlin, B., Esq.
  Collections of SHELLS from co. Antrim.
Ussher, R. J., Esq.
  SPARROW-HAWK. Young. (*Accipiter nisus*, L.) from Queen's Co.
  GARDEN WARBLER (*Sylvia salicaria*, L.).
Warren, Miss A.
  Alexia denticulata, Mont. from co. Sligo.
  Alexia myosotis, Drap. from co. Mayo.
  Lineus marinus, Mont. from Ballina.
  Collection of IRISH LAND and FRESHWATER MOLLUSCA.
Warren, Robert, Esq.
  Coronula diadema, L., from Killala Bay.
Welch, R., Esq.
  Collection of LAND and FRESHWATER MOLLUSCA.
  Collection of LAND and FRESHWATER MOLLUSCA.
  Collection of INSECTS and SPIDERS from N. of Ireland.
  Helix nemoralis, L. from co. Donegal.
  Photographs of SAND MARTINS' Nests.
Williams, Ed., Esq.
  Four Eggs of BLACK-HEADED GULL from Tullamore.
Wilson, J. M., Esq.
  REED-BUNTING (*Emberiza schœniclus*, L.) from co. Longford.
  POCHARD (*Fuligula ferina*, L.) from co. Longford.
  KESTREL (*Falco tinnunculus*, L.) from Edgworthstown.
Wright, Dr. E. P.
  Collection of LIZARDS, FISHES, and INVERTEBRATES chiefly from Seychelles Islands.
Young, W., Esq.
  CROSSBILL (*Loxia curvirostra*, L.) from Queen's Co.
Zoological Society of Ireland (Royal).
  NIGHTJAR (*Caprimulgus europæus*, L.) from co. Dublin.

DONATIONS to the BOTANICAL COLLECTIONS.

Browne, J. M., Esq.
 Marine Algae from Inishbofin.
Burbridge, F. W., Esq., M.A., F.L.S.
 Azolla filiculoides, with megasporangia.
 Cuscuta reflexa.
 Wait-a-bit (*Acacia*, sp.).
Chandlee, T., Esq.
 Oil-painting of himself.
Director of Royal Botanic Gardens, Kew.
 Leaf of Double cocoa-nut (*Lodoicea Seychellarum*).
Geoghegan, Andres, Esq.
 Paraguay Tea (*Ilex paraguensis*).
Powerscourt, Lord, K.P.
 Leaves of Silver tree (*Leucadendron argenteum*).
Robertson, J. G., Esq.
 Beefwood Egg-cup and stand (*Casuarina quadrivalvis*).
Swaine, D., Esq.
 Double Apple.
Sweeny, Miss.
 Marine Algæ from coast of Kerry.
Trustees of British Museum.
 Duplicates of British Phanerogams.

APPENDIX I.

Appendix I.
REPORT OF THE BOARD OF VISITORS.

The FOURTEENTH ANNUAL REPORT of the BOARD OF VISITORS of the SCIENCE AND ART MUSEUM, the NATURAL HISTORY COLLECTION, and the BOTANIC GARDENS.

To the Science and Art Department of the Committee of Her Majesty's Most Honourable Privy Council on Education.

The Board of Visitors inspected the Dublin Museum and the Botanic Gardens at Glasnevin in March 1894, and beg to submit this as their Report.

I.—ART AND INDUSTRIES.

With respect to the taste and skill exhibited in the arrangement of the objects of art in the Museum, we have only to repeat the favourable comments of former years. The general effect of the interior, especially of the Central Hall, is excellent. There is one point on which improvement seems still called for. The dome over the entrance hall has at present a somewhat bare appearance, and might with advantage receive some decoration.

To the ceramic department, already very rich, several interesting additions have been made within the year, in particular some good specimens of Spanish glazed ware from the Riano Collection. A supply of well chosen samples of lace and embroidery continues to be kept up, which is important with a view to encourage and guide our national industry in those branches, which, under enlightened patronage, appears now to be taking a marked extension.

Artistic furniture has also received due attention. As Dublin is a centre of production in this Department it is desirable that good models should be exhibited; and the same observation applies to iron-work.

A substantial addition has been made to the number of reproductions. These are very useful for comparison and for the education of taste. In connexion with them it may be remarked that the present vote for fittings appears to be insufficient.

Ethnographical Collection.

The Ethnographical Collection is an appropriate element of such a Museum, representing as it does primitive forms of Art. The arrangement of it is, we think, preferable to that sometimes adopted. The objects are grouped together according to localities, so that a general picture of the degree of culture attained in each community is presented instead of exhibiting together the analogous products of many early civilizations. Occasional gifts are made to this department by travellers and by officers serving abroad, and it is to be hoped that such donations will become more frequent with the daily increasing opportunities of contact with the less advanced races of mankind.

The system of affixing descriptive labels to the several objects or groups of objects is being extended throughout the Museum. In this way very much instruction can be given to the public, who will not usually study a catalogue with much care, and who will learn by the labels in presence of the objects more than it would be possible to embody in any catalogue of moderate size. As an example of the utility of the labels may be mentioned in particular those which give an account of the history and characters of the several varieties of porcelain.

Industrial Collection.

We have in a former report spoken of the importance of such a collection as would afford a tolerably complete representation of the processes and products

of the Mechanical and Chemical Industries. But however desirable this may be in itself, the project could not, we think, be carried out in immediate connexion with the Museum. The space there available is becoming limited, and will all be required for the adequate illustration of Decorative Art, which is the principal function of the Institution. It may even be doubted whether the proposed object is not more properly attained by occasional exhibitions, as the processes of the useful arts are in a state of constant and even rapid improvement, and any collection intended to represent their existing condition would soon be out of date and possess little more than a historical interest.

II.—ANTIQUARIAN COLLECTION.

The large North-Western Pavilion is still occupied by cases and objects in process of arrangement, and is not yet open to the public. The identification of objects with the entries in the Register of the Royal Irish Academy and the addition of references to their altered locations is necessarily a tedious process, but meanwhile the Museum has not the advantage of the exhibition space which this fine room will afford. The arrangement of the Ecclesiastical Tiles has been completed. The principal models of harps are still in this pavilion.

The removal of the wooden screens and trays from the interior of the glass cases in the long room and the improved methods of mounting have been continued. The most interesting exhibits, such as the Cross of Cong, and the so-called Tara Brooch and Ardagh Chalice are admirably displayed, as are the Croziers, Bells and Trumpets, but the mode of mounting some of the Celts recently adopted seems open to the objection of conveying an impression which is probably erroneous as to the manner in which handles were originally attached to them. This mode of treatment, however, is perhaps only temporary.

The suggestion as to the desirability of exhibiting typical examples of the coins and medals has been carried into effect as regards the former. A well arranged selection of Irish coins, with descriptive labels, is an attractive addition to the Academy's Collection exhibited in the long room; and another case with coins of different countries, has been placed in the Central Hall, with printed labels, and mounted in a different manner.

The arrangement and proper exhibition of the seals, has engaged attention, and progress is being made with their identification and description. Impressions from the seals are being provided, but it would be well if a collection of impressions of important seals not in the collection, such as a series of the Great Seals of Ireland, could be procured and exhibited.

The finger rings have been re-arranged and mounted, but their adequate description still requires attention.

Outside the Royal Irish Academy's Museum, there are several noteworthy antiquarian objects exhibited. Of these some, such as ecclesiastical tiles and Ancient Irish pottery, are in another department. But in the gallery, besides the specimens of stones with Ogam inscriptions, and the boats referred to in a previous report, there is a good collection of casts of inscriptions from Irish Crosses, &c., a few of which need labels, and some interesting water-colour drawings in sepia by Mr. Wakeman, as well as a set of photographs and rubbings from Italy, relating to St. Columbanus which deserve attention.

Though the cases in the long room are improved in appearance, by the alteration in the mode of mounting the contents above referred to, which admits light more freely, the preponderance of black in the frames of the cases gives this handsome room a more sombre appearance than other parts of the museum.

It seems therefore desirable that the painting of the walls which has so much improved the appearance of the Central Hall, should no longer be delayed in the case of the long room, and it might be convenient also to have the painting of the pavilion-room carried out before its opening as part of the museum.

They recommend that the Department should make provision for the formation of a small technical or antiquarian library for the use of the museum staff; the want of which is felt since the Academy's Museum has been separated from its library.

III.—Natural History Collection, with the Collections of Fossils, Minerals, and the Geological Survey of Ireland.

Natural History Collection.—In connexion with the Natural History Collection, we notice the life-like water-colour drawings of tropical plants, animals, and scenery formed at the Bahamas by Lady Blake, and kindly lent by her for exhibition.

Some interesting cases have been added to illustrate natural selection, variation, protective mimicry, colouration, and evolution.

Fossil Collection.—The Visitors were much pleased with the new collection of Plesiosaurus' bones found at Peterborough. Their interest consists in this that the individual bones can be examined separately as in the case of a recent skeleton. To any student of the minute anatomy of the Plesiosaurus, and Pliosaurus, this collection will prove of extreme value. The mode of exhibiting the fossils in the wall cases on glass shelves, sloping at various angles so as to exhibit the largest quantity of material in the greatest perfection of light; ascertaining the necessary slope of the shelves with reference to the horizon, by trial and not by theory is highly to be commended.

Collection of Minerals and Geological Survey Collection.—These valuable collections have now been nearly brought into a condition for exhibition that suits their importance. We recommend the addition of a cube inscribable in the same sphere as the other regular solids, to be placed in the same case with them, and a note should be placed near the pentagonal dodekahedron to state that it has not yet been found in nature, although crystals closely resembling it have been found.

A note should also be placed beside the fine specimen of the Rhombic dodekahedron recently acquired to call attention to the connexion of this crystal with the remarkable terminal planes of the hexagonal cells of the bee.

In the collection of the Geological Survey, we call attention to the admirable display of the Kiltorcan fossils, of Mr. Dunoyer's water-colour sections, and to the fossil reptiles from the coal beds of Jarrow, which now seem likely to be preserved from destruction by decomposition, by the wise precautions which have been taken for that purpose.

IV.—Herbarium.

As compared with last year there has been great progress made with the arrangement of the specimens and the provision of cases for their exhibition.

This part of the museum is advancing in completeness and becoming of greater interest to the public as order is being brought about in its various branches.

The specimens of different kinds of wood brought from Glasnevin have been re-polished and look very well and form an attractive feature in the collections.

The glass-framed specimen boxes for seeds and fruits are well suited for their exhibition. These were noted in last year's Report, but they have been increased in number and scientifically arranged.

The room in which the Hortus Siccus is kept is rapidly becoming the receptacle of a very complete collection, very large and varied, and of the greatest use for the examination by students.

The visitors, bearing in mind the existence of the large Herbaria at the British Museum and at the Royal Gardens, Kew, do not think it advisable that any large extension should be made (for the present) in the Herbarium; they would, however, strongly urge that the economical portion of the Botanical Museum, which has a great interest for the general public should be developed and displayed.

Round the Museum are hung a series of coloured diagrams with explanatory letterpress, illustrating the anatomy of plants. In the wall cabinets are arranged specimens of Coniferæ, with branches showing the foliage and the cones, well adapted for instruction.

In a corner is a collection of the products of peat which was formerly in the College of Science and is now transferred here.

It would be desirable that the Keeper of the Herbarium should be able to give more of his time to the arrangement of the collection in the Herbarium, and in the Botanical galleries of the Museum, especially at the present time, as the work develops as it is now doing to an extent which requires more attention than under existing circumstances he is able to give to it.

V.—BOTANIC GARDENS, GLASNEVIN.

The Offices and Laboratory at the entrance are in good order, the Library has been increased and the books re-bound.

The retiring room or shelter which was to have been erected for the convenience of Visitors waiting for the trams has not yet been provided. A small expenditure would supply this necessary adjunct to the gardens.

The Fern House is in very good condition as is also the adjacent Victoria Regia house, and the new tanks for hardy water-lilies are a great success and form an attraction to the public visiting the gardens.

The long required House for Succulent plants has not yet been provided. This the Visitors urge as the one great necessity for the completion of the series of structures for the cultivation of plants of rare and interesting character.

The Lower Plant Yard is in good order, and only requires one or two small brick pits to make it equal to all requirements.

The Curvilinear Range is also in a very efficient state, the glass has been repaired and the houses comprised in it answer every purpose.

The Orchid Houses are in perfect order, with the exception of some exterior and interior painting, to preserve them from decay.

The Palm House continues to be the great attraction to the public and is in efficient condition, which is testified by the luxuriant health of the splendid collection of plants which it contains. The Camellia House also is in the best working order and needs no remark.

If the Department could consider the possibility of the three requirements most urgently needed, the House for Succulent Plants, Tropical Fern House, and the Shelter at the gate, the Visitors hope that with a very moderate expenditure on the erection of these three most necessary buildings, the Gardens would be complete so far as buildings are concerned, and they therefore bring these matters to its attention in the hopes of an early compliance with this suggestion.

The Rockery has been added to, and now contains a very choice collection of Rock plants and Ferns.

The fine old Yew trees forming "Addison's Walk" have been cleared of ivy and the soil renewed about their roots, an attention which they seem to appreciate by their pushing out new shoots in every direction.

The enclosed Garden is full of young plants for the replenishment of the rest of the establishment.

The open parts of the Gardens have been replanted in great measure, with classified specimens of various genera such as oaks, the Pyrus tribe, &c.

The stable range of houses are also in good order, but require painting.

The Visitors wish as on former occasions to testify to the excellent condition of the plants and houses throughout the whole of the Botanic Gardens.

The state and condition of every part of this large concern reflects, in their opinion, the greatest credit upon the management of Mr. Moore, the Keeper. Since his accesssion to office, now some years, it is remarkable how the welfare of the grounds and all within the precincts of the Gardens has progressed and been maintained.

The assiduous care and attention to every detail of the management is exhibited to any observer by the luxuriant health of the plants in every part of the Gardens, and shows his conscientious supervision over his work and his energy and knowledge of the matters placed under his charge.

(Signed) ARDILAUN,

President Board of Visitors.

Appendix J
LIBRARIAN'S REPORT.

APPENDIX J.

REPORT of the LIBRARIAN of the NATIONAL LIBRARY OF IRELAND, adopted by the COUNCIL of TRUSTEES, and forwarded to the DEPARTMENT OF SCIENCE AND ART as their Annual Report.

NATIONAL LIBRARY OF IRELAND,
Kildare Street, Dublin, 1st January 1894.

GENTLEMEN,

I BEG to hand you my Annual Report for the year 1893.

The attendance of the public registered by the turnstile during the year 1893 has been as follows :—

Gentlemen, morning (10 till 6 o'clock)	71,299	Daily average	242·25
" evening (6 till 10 o'clock)	34,631	"	118·25
	105,930		360·5
Ladies	7,958	"	27·5
Total	113,888	"	388

During the year there have been added to the library 2,178 volumes, of these 293 being folios, 236 quartos, and 1,649 octavos. The accessions fall under the following classes :—

Bibliography	28
Cyclopædias	3
Newspapers	50
Ancient and Modern Philosophy	25
Psychology	5
Logic	3
Ethics	7
Theology (at large)	78
Bible	12
Ecclesiastical History	12
Non-Christian Religious Systems: Mythologies, Nature-Worship, Buddhism, Muhammadanism, Judaism, &c.	12
Statistics	13
Political Science, Political Essays	59
Political Economy	43
Law	16
Administration, Civil and Military Services	24
Commerce	11
Education	19
Amusements, Customs, and Manners	35
Philology, general and comparative	14
English, French, German, Italian, Greek, Latin, and other Languages	27
Science in general	41
Mathematics	29
Astronomy	10
Physics	25
Chemistry	39
Geology	13
Palæontology	1
Biology	7
Botany	29
Zoology	72

Biography	136
	1,706
Add Government Publications, British Museum, Science and Art Department, Public Bodies, &c.	364
Patents	108
	2,178

The following is a return of the number of volumes lent out to, and received back from, the borrowing members of the Royal Dublin Society:—

Number of volumes in members' hands at 31st December 1892 - - - - - -	421
Lent out during 1893 - - - - - -	3,439
	3,860
Returned during 1893 - - - - -	3,460
Number of volumes in members' hands at 31st December 1893 - - - - -	400

As regards binding, 3,300 volumes were taken over by the binder in 1893 in place of the usual 3,600. During 1893, however, 3,600 volumes were prepared, but owing to the departure of the former second Assistant-Librarian and the unavoidable delay which took place in the appointment of a successor, the "flow" was not maintained at the rate of 300 volumes per month, leaving thus an accumulated arrear till more towards the end of the year. At the end of last year 1,200 volumes were in the binder's hands, and the same number remain unreturned at the present date.

The Supplemental Catalogue for 1891 is in course of being printed off, and a beginning made on 1892. In the interim of printing the titles for 1892 and 1893 from the monthly sheets are laid down in the desk catalogue, so that, ordinarily, it is very little behind date at any time. Further three manuscript lists (albeit eventually superseded by the printed catalogues) are kept, all of them being extremely useful. One of these, the ordinary library accessions-book, is of course in the accidental order of the arrival of the volumes as they come to hand—the other two in alphabetical (though not absolutely "dictionary") order and these are posted up within 24 or 48 hours. One of these latter is constantly accessible to the public, the other two lists being solely for official use. A similar manuscript index to "Blue books" in alphabetical order, and accessible to the public, is also kept, and performs a useful function pending the appearance of the printed index. Information more—or even perhaps as—closely up to date, I feel confident, is not at command in any other active and popular library in the kingdom.

The classed annual printed supplements, compiled with great care, on the most approved bibliographical method, and with the greatest perspicuity and exactitude, that we are able to bring to bear, now reach back over a period of some 20 years, and form a repertory of reference of extreme value and usefulness both at home here, and even in a number of other places whither we have sent them, where they are scarcely less serviceable.

Progress is being made in placing and adjusting the printed class numbers, or in other words, the location-marks, on the shelves, the names of the subjects or topics implied by these numbers being added in bold types, so that "he who runs may read." Shelf-lists are being made, *pari passu*, from which the location numbers will be transferred to the desk catalogue. This operation is a tedious one, nor could it be otherwise on any system of press-marking, and can be pursued only during the intervals allowed by other branches of the library work. For the last couple of years the location-marks are added in type to author-entries as printed, and as they are laid down, of course any future necessity in such cases for doing this with the pen is anticipated and provided for.

About exactly one half of the volumes in the Joly Collection have received their location-mark or class-number. Taking into view that this work can be prosecuted only during intervals when the other work of the library allows the requisite opportunities, I think the progress made is not unsatisfactory. When completed, it will be done for good, and the collection will find itself definitely and exactly arranged, the shelves carefully labelled according to subjects, when the character and scope, and the extent of each section, will be visible at a glance.

The long hoped-for electric accumulator, to enable us to turn on the electric light in the book-store and offices on dark days at times when the dynamo is not at work, has not yet been set on foot, neither have steps been taken to

make the connexions for certain other additional and stronger lights in various positions already pointed out, some considerable time ago, to the experts who came to inspect the position of affairs. About one third, however, of the lamps, which will be ultimately required there, have been placed on the lowest floor of the book-store, some little time back, prior to which the only lighting at night, when required, was the small supply of gas at command.

A hydraulic or electric lift for books still remains a desideratum.

I remain, Gentlemen,
Your obedient Servant,
(Signed) WM. ARCHER,
Librarian.

To the Council of Trustees of the
National Library of Ireland,
Dublin.

Resolved, that the Librarian's Report be accepted and adopted by the Trustees, with the following addition, as their report:—

The attention of the Department is once again called to the case of Mr. Praeger, who, though appointed under the Act Assistant-Librarian on the 2nd of May 1893, has not yet received from the Civil Service Commissioners either a notification to attend an examination or a certificate under Clause VII., as more fully detailed in the following resolution forwarded to the Department:—

"The Trustees of the National Library of Ireland have had before them the correspondence which has passed between the Science and Art Department, the Civil Service Commissioners, and the Treasury, with a request from the Science and Art Department that the Trustees would, as soon as possible, favour them with their views on the proposal of the Treasury. In compliance with this request, the Trustees note that the proposal of the Treasury, as conveyed in Sir F. Mowatt's letter of the 26th September 1893, is 'That the 'Trustees for the future would agree to appoint for vacant posts in the 'National Library the candidate who should be successful at an examination 'to be held for that purpose by the Civil Service Commissioners, out of a 'number of candidates not less than three, to be nominated by the Trustees.' In reference to this proposal the Trustees do not consider that they would be acting in the spirit of the agreement made with the sanction of Her Majesty's Treasury in 1881, between the Royal Dublin Society and the Science and Art Department if, instead of 'appointing' officers as vacancies occurred in the National Library of Ireland, they were simply 'to select a number of candidates' for a competitive examination to be held by the Civil Service Commissioners. The legal right of the Trustees to appoint does not seem to be in question, and the Trustees have no option but to carry out their Trust. The Trustees fully recognise the power of the Treasury to require the officers as appointed by them to pass the usual examination by the Civil Service Commissioners, should it be deemed expedient by them so to do. They feel, however, confident that the Lords of the Treasury will always act in this matter in concert with the Trustees, and as may be most for the benefit of the public service.

"In reference to the statement in Sir F. Mowatt's letter that if an agreement can be concluded on the basis of the above proposal, My Lords will then at once ask the Civil Service Commissioners to grant a certificate to Mr. Lloyd Praeger, who was appointed Assistant-Librarian by the Trustees on the 2nd of May last, as duly notified to the Treasury, the Trustees of the National Library of Ireland feel bound to urge upon the Lords of the Treasury to move the Civil Service Commissioners to at once grant Mr. Praeger his certificate, and as from the 2nd May last.

"The Trustees feel justified in believing that the Lords of the Treasury will not permit the National Library of Ireland, or this officer, to suffer pending an arrangement of the point which their Lordships have now raised."

(Signed) JOHN K. INGRAM,
Chairman.

16th January 1894.

APPENDIX K.

Appendix K.

REPORT ON ROYAL HIBERNIAN ACADEMY.

ROYAL HIBERNIAN ACADEMY of ARTS.

REPORT of the COUNCIL for the YEAR 1892–93.

The Council begs to submit to the Academy the annual report of its proceedings for the year 1892–93.

The Exhibition, which opened on Monday, the 6th of March, and closed on Saturday, the 3rd of June, remained open 13 weeks, during seven of which it was open by gaslight, at a reduced charge of one penny. It contained 468 works.

The season tickets numbered 156. The day admissions, at one shilling, 2,544. The evening admissions, at one penny, 9,803; and the Sunday admissions, for the eight Sundays it was open in the afternoons, at twopence, 1,346.

The purchases amounted to 802*l.* 15*s.*

The following is an analysis of the attendance and receipts :—

		£	s.	d.
156	Season tickets, at 3*s.*	23	8	0
2,544	Day admissions, at 1*s.*	127	4	0
9,803	Evening admissions, at 1*d.*	40	16	11
1,491	Catalogues, at 6*d.*	37	5	6
1,928	Catalogues (evening), at 3*d.*	24	2	0
1,346	Sunday admissions, at 2*d.*	11	4	4
382	„ catalogues, at 3*d.*	4	15	6
	Commission on sales	52	2	6
		£320	18	9

During the Exhibition the pupils of twelve educational institutions were invited to visit the Exhibition gratuitously.

The schools of the living model, and for the study of the antique, opened on November 5th, 1892, and closed on June 9th, 1893, being open 31 weeks. The average attendance weekly was 30 in the life school.

The day painting school opened for the session on April 17th, and closed June 13th, being open eight weeks, five days weekly; the average attendance being 30 weekly.

The Albert Prize for 1893 was awarded to Henry Allan, for his picture, "The Little Match Seller," No. 68 in the Annual Exhibition; and an additional prize of 10*l.* was awarded to Oliver Shepard, for his "Statuette," No. 466.

The office of President being vacant, and through the absence, from illness, of the Inspector of the Science and Art Department, F. B. Barwell, Esq., the Keeper, P. Vincent Duffy, Esq., R.H.A., together with Walter F. Osborne, Esq., R.H.A., made the following awards at the Annual School Competition, held on July 5th 1893 :—

SPECIAL COMPETITION.

Drawing from the Living Model.

Silver medal—N. B. Browne.
Bronze medal—A. Robinson.

Prize of 3*l.* best drawing from life during session—C. E. Lodge.
„ 1*l.* second best drawing from life during session—Henry Allan.
„ 3*l.* best painting from life—H. Allan.
„ 1*l.* second best painting from life—R. Sheppard.

Appendix K.

REPORT ON ROYAL HIBERNIAN ACADEMY.

The Council regrets to record the death, on May 10th, 1893, of Sir Thomas Alfred Jones, who filled with dignity and urbanity the office of President from 22nd June 1869, to the date of his death, and during that period guided the business of the Academy with wisdom and firmness. The Academy are indebted to him for the generous gift of 600*l.* in the year 1878 for the purpose of extending and improving their School and Exhibition accommodation, that sum being subject to an annual life rent secured to him of 30*l.*, the payment of which now ceases.

The sad death, on October 12th, 1893, under very afflicting circumstances of Mr. Arthur Jocelyn Mayne, who was for more than 20 years an active and disinterested member, conscientiously devoted to the interests of the Academy; and the death of Mr. Joseph O'Reilly, Associate, at an early age, which sad event closed what promised to be a brilliant and successful artistic career, are also recorded with deep regret.

Mr. Charles Russell, Associate, was elected a constituent member, and Messrs. Albert E. Murray, architect, and J. B. S. M'Ilwaine, landscape painter, were elected Associates.

Mr. R. T. Moynan kindly acted as representative of the Academy at the award of the Taylor Prize Competition for 1893, and Mr. Walter F. Osborne has consented to act in a similar capacity for next year, 1894.

At the request of the Art Union of Ireland a further concession was granted to them; the holders of single 5*s.* shares being admitted to the Exhibition on each Saturday free, in return for which the Art Union agreed to increase their consideration for admission of their shareholders from 15*l.* as heretofore to 21*l.*

ALEXANDER WILLIAMS, R.H.A.
THOMAS FARRELL, R.H.A.
W. BINGHAM M'GUINNESS, R.H.A.
J. M. KAVANAGH, R.H.A.
J. L. ROBINSON, R.H.A.
J. JOHNSTON INGLIS, R.H.A.
} *Members of Council.*

S. CATTERSON SMITH, R.H.A., *Secretary.*

REPORT TO SOLAR PHYSICS COMMITTEE.

APPENDIX L

REPORT TO SOLAR PHYSICS COMMITTEE, by Professor J. NORMAN LOCKYER, F.R.S.

(*From June* 13*th*, 1889, *to May* 22*nd*, 1890.)

I.—LABORATORY WORK.

a. *Solar-Metallic Comparisons.*

Since the last meeting of the Solar Physics Committee (June 13th, 1889), this work has progressed very considerably. A series of photographic prints of the solar spectrum, ranging from λ 390 to λ 680, photographed by Professor Rowland with a diffraction grating, have been copied and mounted on 29 drawing boards. Comparison photographs have been taken by Sergeant Kearney, R.E., of the arc spectra of the chief metals and of the solar spectrum with a four-prism Steinheil spectroscope and camera. The chlorides of the metals were chiefly used, but for the iron spectrum a sample of electrolytic iron was obtained from the Royal Mint. The lines in these spectra have been mapped on the drawing boards in their exact position with reference to the solar spectrum. The following list gives the metals and the length of spectrum through which their spectra have been mapped:—

Arc-Spectra of Metals (Carbon-pole Photographs).

Metal.	Length of Spectrum Mapped.	Metal.	Length of Spectrum Mapped.
Iron	K — D	Platinum	K — D
Manganese	K — A	Palladium	K — 490
Cobalt	K — A	Lead	K — D
Nickel	K — A	Gold	K — D
Chromium	K — D	Thallium	K — D
Uranium	K — D	Didymium	K — D
Cerium	K — D	Lanthanum	K — D
Tungsten	K — D	Yttrium	K — D
Molybdenum	K — D	Erbium	K — D
Vanadium	K — D	Gallium	K — G
Osmium	K — D	Cadmium	K — A
Iridium	K — D	Mercury	K — D
Ruthenium	K — D	Copper	K — D
Rhodium	K — D	Barium	K — A
Arsenic	K — D	Strontium	K — A
Antimony	K — D	Calcium	K — A
Bismuth	K — D	Magnesium	K — A
Titanium	K — D	Zinc	K — A
Tin	K — D	Silver	K — D
Tantalum	K — G	Sodium	K — D
Thorium	K — 450	Lithium	K — D
Niobium	K — 460	Potassium	K — D
Zirconium	K — G	Rubidium	K — 520
Aluminium	K — D	Caesium	K — 500
Indium	K — D		

The spectra of several metals were photographed with the same spectroscope between D and A in the solar spectrum, but the dispersion given was

too small for the lines to be mapped accurately. For the region from D to A, a diffraction grating was therefore used instead of the prisms. The red-end spectra of the remaining metals are being photographed when circumstances permit.

b. *Silver-pole Photographs.*

As the carbon poles contain many impurities, it is intended to photograph the arc spectra of the common metals between silver poles, in order to facilitate the elimination of the lines due to these impurities. This has already been done in the case of the following metals :—

Metal.	Length of Spectrum Photographed.	Metal.	Length of Spectrum Photographed.
Manganese	K — 420	Strontium	K — 420
Cobalt	K — 420	Calcium	K — 420
Nickel	K — 420	Magnesium	K — 420
Barium	K — 420	Zinc	

The lines from these have been mapped, and the lines due to impurities struck out.

The second series of Professor Rowland's prints of the solar spectrum have been mounted on a new set of boards. These are to be reserved until the elimination of all lines due to impurities is accomplished, and the remaining lines are then to be transferred from the old boards to the new.

c. *The Spectrum of Iron.*

Two of last year's students, the Misses W. and R. Sandbach, have compared the spectrum of electrolytic iron as mapped from solar comparison photographs with the wave-lengths of the iron lines given by Thalén in his standard work "Sur le spectre du Fer, Upsala 1884."

The wave-lengths of the lines in the arc spectrum of iron were determined by Thalén by direct comparison with lines in the solar spectrum. By treating photographic plates with erythosin and cyanin it is possible to obtain comparison photographs to cover the whole of the region he investigated. So far, the comparison of the wave-lengths obtained from the photographs with those given by Thalén have been taken from just below K to D. Thalén, however, goes to A.

The work undertaken by the Misses Sandbach is important, not only because it verifies most of that done by Thalén, but because by it the difference of wave-length between Ångström's and Rowland's scale is determined. This is in fact what has been done: The wave-length of a line on the scale of Rowland's maps is found and its intensity estimated. It is then compared with the line given by Thalén and the difference of wave-length on the two scales determined. The correction to be added to Ångström's numbers in order to bring them up to Rowland's standard is not, however, constant. At about λ 4000 it is on the average one tenth-metre, 0001, it then diminishes to about λ 4270, where the average difference =0000·3, then the difference appears gradually to increase, reaches an average of 0001·3 at about λ 4800, has an average of 0001·0 to about λ 5200, after which the difference appears again to increase up to D.

A few abnormal differences occur, *e.g.*, a very strong line at 4667·8 gives a difference of 2·3 with Thalén's measure of its wave-length. The line is coincident with a strong line in the sun, and the difference has been verified, so that it appears that Thalén's determination of its wave length is incorrect. A few other lines also show abnormal differences. Thalén's estimation of the intensities of the lines, however, generally agrees with their relative intensity

on the photographs. The scale of intensity used by Thalén and that adopted in mapping the lines is such that 1 represents the strongest lines and 6 the weakest. Three lines at 4432·8, 4433·4, and 4434·0 are given the intensities 4, 3, and 4 by Thalén; in the photographs, however, their intensities are 6, 5, and 6.

Some doubles have been found given by Thalén as single lines, and many lines which he suspected to be double have been proved to be so; generally speaking, however, the number and intensity of the lines tabulated by Thalén is the same as that given by the photographs, indicating that the electrolytic iron used for the photographs was very pure.

d. *Oxy-hydrogen Flame Spectra.*

The existing maps of "The Flame Spectra of Elements" have been revised and enlarged, both in extending the range of observation and the number of elements mapped. The following table gives a list of those elements which have now been mapped:—

Iron.	Cadmium.
Manganese.	Mercury.
Cobalt.	Copper.
Nickel.	Barium.
Chromium.	Strontium.
Arsenic.	Calcium.
Antimony.	Magnesium.
Bismuth.	Zinc.
Titanium.	Silver.
Aluminium.	Lithium.
Lead.	Sodium.
Thallium.	Potassium.

In addition to the above, the "Structure Spectrum of Hydrogen"* was mapped as a comparison spectrum below the above elements.

The maps extend from λ 30 to 70; from λ 30 to λ 40 the spectra were reduced from photographs taken by Mr. Gregory; from λ 40 to 50, from photographs taken by Mr. Coppen. From λ 50 to λ 70 the spectra were reduced from previous maps and from eye-observations made by Mr. Coppen. In the latter case, reference was made to the observations made by Lecoq de Boisbaudran, and recorded in his "Spectres Lumineux."

The elements, or, when they were unsuitable, their salts, usually the chlorides, were volatilised in the oxy-coal-gas flame, the image of which was focussed on the slit of a spectroscope and either observed by eye or received on a photographic plate, on which was also recorded, for comparison, a spark spectrum of air between iron poles.

e. *The Spectrum of Carbon.*

A new series of measures of the positions of the various flutings of carbon have been made, chiefly by the aid of photographic solar comparisons. The older measures by various observers were very discordant, especially in the red end.

II.—OBSERVATORY WORK.

a. *Observations of Sun-spot Spectra.*

The sun has been observed on each day that the weather permitted, but only some 14 observations of spot spectra have been recorded; this is accounted for by bad weather, a minimum period, and the extreme smaliness of many of the spots which have been seen on the sun's disc.

---

* Hasselberg, Mémoires de L'Académie Impériale des Sciences, St. Pétersbourg, Tome XXX., No. 7.

Since the last meeting (June 13) there have been 343 days, or, excluding Sundays and public holidays such as Christmas and Good Friday, 289 days. Mr. Coppen is responsible for these observations.

Days on which weather did not permit of observation -	170
Days on which "No spots" was recorded - - -	72
Days on which the spots seen were too small for spectroscopic observation - - - - -	24
Days on which spots were recorded, but the weather did not permit their spectra to be examined - - -	9
Days on which the spectra of spots were recorded - -	14

b. *Solar Observations in India.*

Authority having been given by the Secretary of State for India for the instruments belonging to the Indian Government to be employed in making observations for the Solar Physics Committee, Lieut.-Colonel Strahan, of the Trigonometrical survey at Dehra Dun, has undertaken to do what work is required. Detailed instructions as to the adjustments of the instruments and the observations suggested by the Committee have accordingly been sent to him. The observations are, in the first instance, to be devoted almost exclusively to sun-spot spectra.

The instruments to be employed were formerly in use for similar work at South Kensington.

c. *Observations of Stellar and Nebular Spectra at Kensington.*

Observations of the spectra of stars and nebulæ have been made on almost every possible occasion during the past year by Mr. Fowler, who was assisted by Messrs. Baxandall and Coppen. On the whole, the weather was very unfavourable for astronomical work, but a considerable amount of new information has been obtained. A good deal of time was devoted to observations of the nebula in Orion, with special reference to the wave-lengths of the three principal lines and their appearances in different parts of the nebula.

Numerous observations of the bright-line stars in Cygnus, and γ Cassiopeiæ were also made, with the object of determining the presence or absence of

carbon radiation. In all cases bright carbon flutings were found, indicating the probable cometary character of this class of stars.

The spectra of the components of several double stars have been observed, chiefly with the aid of the 10-inch object-glass prism.

Attempts have also been made to differentiate between stars like the sun which are cooling (Group V.) and stars at an equal mean temperature which are getting hotter (Group III.), but with the optical power available it has only been possible to work with the brightest stars.

d. *Observations at Westgate-on-Sea.*

The observations at Westgate with the 30-inch reflector are intended to supplement those made at South Kensington, particular attention being given to work which requires greater optical power than a 10-inch refractor. The work done so far has consisted partly of eye-observations, and has been partly photographic. The observations of bright-line stars made at Kensington were repeated and confirmed, and spectroscopic observations of several nebulæ were also made. The spectrum of the Orion nebula was observed on several occasions, and, in addition, five photographs were taken. These photographs show many new lines.

The work of differentiating Vogel's Class II.*a* stars into Groups III and V, which was commenced at Kensington, has been continued at Westgate, but other work has prevented this being done to any great extent.

Photographs of the spectra of other nebulæ besides that of Orion have been attempted, but without success. It has since been found that the probable cause of failure was the fact that during three or four hours the relation between the optic axes of the telescope and the finder did not remain constant probably on account of flexure of the tubes. A new piece of apparatus to act as finder has since been attached directly to the spectroscope.

III.—Sun Photographs.

8-*inch pictures.*

Indian photographs :

Since the last meeting of the Solar Physics Committee 539 8-inch silver prints of negatives have been received here from Dehra Dun. The dates of these extend from 30th March 1889 to 12 March 1890. The following list gives the 33 dates for which Indian prints have not been received :—

1889.—April 10; May 9; June 10; July 1, 3, 5, 7, 8, 11, 12, 19, 25, 28, 30, 31; August 1, 4, 11, 12, 15, 16, 17, 19, 26, 27; December 14, 28.

1890.—January 15, 17, 18, 22; February 20, 23; March 4.

The last parcel of Indian prints was received on May 7th, 1890. They are mounted immediately on arrival, and bound into volumes for convenience of reference.

537 8-inch negatives of sun photographs have also arrived from Dehra Dun.

Mauritius photographs :

Since June 13th, 1889, 8-inch silver prints have been received from Mauritius for 328 separate days. From these all the gaps in the Indian Series are filled up, with the exception of the following :—

1889.—May 9; July 8.

1890.—January 18, 22.

The last parcel of Mauritius prints arrived here on May 24th, 1890.

237 negatives have also been received since the last committee meeting. Of these four were broken in transit.

Cambridge photographs :

186 negatives have been received from Professor Pickering, of the Harvard College Observatory. The dates of these extend from September 1st, 1875 to November 29th, 1876. Two of these negatives were broken.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

Pulkowa photographs :

A parcel of 74 sun negatives was received on October 25th, 1889 from the Pulkowa Observatory. Of these, three are for 1881, 2 for 1883, 64 for 1884, and 5 for 1885.

Melbourne photographs :

No negatives have been received from Melbourne since March 1886.

12-*inch pictures.*

None have been received since the last meeting of the Committee.

IV.—THE SPECTRUM OF SKY-LIGHT.

During a recent voyage on sick leave in the Mediterranean, I tried the effect of exposing a photographic plate to the spectrum of the cloudless sky between the end of twilight and dawn. The exposures on successive nights were integrated so that at the end no less than 99 hours' exposure had been given. No exposures were made during moonlight. Before developing the plate the half of the slit which had been covered during the first exposure was exposed to daylight for 30 seconds, and in this way a suitable comparison spectrum was obtained. The resulting spectrum was rather fainter than the comparison, but showed no notable differences, and it is difficult to say whether it was due to traces of the spectrum of twilight or to the general spectrum of starlight. The object of the experiment was to determine whether skylight was composed of anything but starlight. The instrument used was a direct vision spectroscope, encased in a light-tight box, so arranged that the successive exposures could be made by simply withdrawing a shutter. In this experiment I was assisted by the officers of the R.M.S.S. "Chimborazo."

V.—INSTRUMENTS.

The instruments at South Kensington are all in good order, and several additions have been made since the date of the last report. The most important addition is an apparatus for supporting the 10-inch object glass when it is used in conjunction with the siderostat for observing the spectra of the heavenly bodies. It is provided with a collimator for making accurate comparisons with laboratory spectra, and a 2-inch finder for keeping the image on the slit. This arrangement has already been successfully employed in making observations of the spectrum of the Orion nebula with a 4-prism Steinheil spectroscope.

A new 36-inch reflector, for which Mr. Common has kindly undertaken to grind the mirror, is being erected in the ground adjoining the present observatories. When not in use by students this will be available for observations requiring large aperture.

VI.—PAPERS PUBLISHED, OR IN PREPARATION.

a. The following papers have been read at the Royal Society since the last meeting of the Solar Physics Committee:—

"Further discussion of the Sun-spot Observations made at South Kensington. A report to the Solar Physics Committee." Communicated to the Royal Society at the request of the Committee. By J. Norman Lockyer, F.R.S. Received June 27, 1889.

"On the cause of Variability in condensing Swarms of Meteorites." By J. Norman Lockyer, F.R.S. Received June 27, 1889.

"Comparison of the Spectra of Nebulæ and Stars of Groups I. and II. with those of Comets and Auroræ." By J. Norman Lockyer, F.R.S. Received November 9, 1889.

"The presence of Bright Carbon Flutings in the Spectra of Celestial Bodies." By J. Norman Lockyer, F.R.S. Received November 23, 1889.

b. The following papers have been communicated to the Royal Society, but are not yet published :—

"On the Chief Line in the Spectrum of the Nebulæ." By J. Norman Lockyer, F.R.S. Received December 9, 1889.

"Note on the Spectrum of the Nebula of Orion." By Professor J. Norman Lockyer, F.R.S. Received February 13, 1890.

"Preliminary Note on Photographs of the Spectrum of the Nebula in Orion." By Professor J. Norman Lockyer, F.R.S. Received February 13, 1890.

c. In addition to the researches previously referred to, papers are also in preparation on the following subjects :—

On the Origin of New Stars. This includes discussions and suggested explanations of all the observations of Novæ which have been made.

The classification of stars of Group VI. This work is delayed on account of insufficient details in the existing published observations.

The Spectra of Nebulæ. This is a discussion of the observations of lines other than the principal one in the spectra of nebulæ.

Detailed discussion of Photographs of the Spectrum of the Nebula in Orion.

VII.—PERSONNEL.

The assistants at present employed by the Solar Physics Committee are the same as at the time of the last meeting, namely, Messrs. Baxandall, Gregory and Coppen. Mr. Fowler, the Demonstrator of Astronomical Physics, also devotes a considerable amount of time to the observatory work.

Mr. James is still occasionally employed as examiner in connexion with the reduction of the solar photographs.

Sergeant J. Kearney, of the Royal Engineers, is engaged in taking the solar-comparisons, and other photographic work of the Committee. The instruments are kept in order, and the solar prints mounted, by Corporal Wood, R.E.

J. NORMAN LOCKYER.

REPORT to SOLAR PHYSICS COMMITTEE, by Professor J. NORMAN LOCKYER, F.R.S.

(*From May 22nd*, 1890, *to November 18th*, 1891.)

I.—LABORATORY WORK.

a. *Solar-Metallic Comparisons.*

Since the date of the last report good progress has been made in the new map of the solar spectrum with metallic coincidences. Up to that time the work had chiefly consisted in mapping the spectra of the different metals taken in the arc with carbon poles. The method of eliminating impurities by the use of silver poles, referred to in the last report, has since been largely employed, and the amount of work done in these reductions is shown in the appended table. The crosses indicate that the lines due to impurities, as indicated by the silver pole spectra, have been removed from the map in the regions where they occur.

b. *The Spectrum of Iron.*

No further progress has been made with the map of the iron spectrum, on account of the difficulty in getting the necessary pure electrolytic iron. The work is completed from K to D.

II.—OBSERVATORY WORK.

a. *Observations of Sun-spot Spectra.*

The sun has been observed on each day that the weather permitted, but only some eight observations of spot spectra have been reported; this is accounted for by bad weather, nearness to a minimum period, and the extreme smallness of many of the spots which have been seen on the sun's disc.

Since the date of the last report there have been 180 days, or, excluding Sundays and public holidays, 153 days. Messrs. Baxandall, Rogers, and Boulton are responsible for these observations.

b. *Stellar Work at Kensington.*

On all available occasions some of the assistants have been engaged at the Observatory. Since the last report there have been 180 nights, or, excluding Sundays, 154.

Week nights on which the weather did not permit of work being done - - - - - - -	105
Sunday nights on which no work was done - - -	22
Week nights on which work was done - - -	49
Sunday nights on which work was done - - -	4
	180

In May and June. Mr. Fowler made observations of the spectra of Comet Brooks (α 1890), several Cygnus stars, and a few small nebulæ.

Since June, the work done has mainly consisted of photographing stellar spectra. For this purpose, two 10′ object-glass prisms of 7½° each have been used along with the 10″ refractor. So far, stars of the 1st and 2nd magnitudes only have been successfully operated upon, although many attempts have been made on stars of lower magnitude (chiefly Vogel's Class II.*a.* stars), but generally without success, owing to errors in the driving clock.

Since the adjustments were made, photographs have been obtained of Rigel, Bellatrix, and several other Orion Stars, Procyon, *a* Cygni, Altair, and a few stars in Pegasus.

Attempts have also been made to differentiate some of the Class II.*a* stars in Vogel's list into Groups III. and V., but the optical power available at Kensington is not sufficient for this work to be successfully carried out.

The spectra photographed have been mapped on a large scale in order to facilitate comparisons.

c. *Observations at Westgate-on-Sea.*

The observations at Westgate with the 30-inch reflector have been continued, more especially with reference to the differentiation between Groups III. and V. All the stars of Class II.*a.* in Vogel's zone (—1° to + 20°) between the hours XX. and III. of Right Ascension, down to the 6th magnitude, have been completely re-observed. The number of stars observed in this region is 120, and in addition to these about 30 more, not systematically distributed in this limited zone, have also been observed.

Mr. Fowler has been at Westgate on 30 evenings. On 15 of these bad weather totally prevented any observations being made, 7 were partially fine, and 8 are described in the note book as "moderate" or "very fine."

III.—SUN PHOTOGRAPHS.

Indian photographs :

Since the last report, 251 8-inch silver prints of negatives have been received from Dehra Dun. The dates of these extend from March 13th, 1890, to September 10th, 1890. On the following dates no photographs could be taken at Dehra Dun owing to bad weather, and consequently no prints for these dates were sent :—

1890.—March 18, 19, 20; April 12, 17, 24, 25, 26; June 7, 25; July 7, 15, 23, 24, 27, 29, 30, 31; August 1, 2, 3, 7, 12, 13, 14, 17, 18, 19, 26, 27.

The last parcel of Indian prints was received on October 24th, 1890. They have been mounted and bound into volumes for convenience of reference.

250 8-inch negatives of sun photographs have also arrived from Dehra Dun. In addition to these, 5 8-inch and 4 12-inch negatives of an annular eclipse of the sun (occurring on June 17th, 1890) were taken and forwarded here.

Mauritius photographs :

Since May 1890, 8-inch silver prints have been received from Mauritius for 156 separate days. From these all the gaps in the Indian series are filled up, with the exception of the following :—

1890.—March 20; April 12; July 30.

The last parcel of Mauritius prints arrived on November 10th, 1890.

116 negatives have also been sent from Mauritius since the last meeting of the Committee.

12-*inch Pictures.*

None have been received since the last meeting, with the exception of the eclipse negatives already referred to.

IV.—REDUCTIONS OF SOLAR PHOTOGRAPHS.

The reductions of the Indian and Melbourne photographs which fill gaps in the Greenwich series for the years 1878–1881 are now ready for press. At the suggestion of the Astronomer Royal the copy for press was sent to Greenwich for comparison with the Greenwich results for the same years.

A title page and preface have been prepared, and the work will soon be in the hands of the printers.

V.—PAPERS PUBLISHED, OR IN PREPARATION.

The following papers were communicated to the Royal Society before the last meeting of the Committee, but they have been published since :—

"On the Chief Line in the Spectrum of the Nebulæ." Received December 9, 1889.

"Note on the Spectrum of the Nebula in Orion." Received February 13, 1890.

"Preliminary Note on Photographs of the Spectrum of the Nebula in Orion." Received February 13, 1890.

The following paper has been communicated to the Royal Society since the last meeting :—

"On the Spectrum of Comet *a*, 1890, and the Nebula G.C. 4058." Received June 12, 1890.

Papers are in preparation on the following subjects :—

On the Origin of New Stars. This includes discussions and suggested explanations of all the observations of Novæ which have been made.

The Classification of Stars of Group VI. This is delayed on account of want of detail in the published observations.

The Spectra of Nebulæ. This is a discussion of the observations of lines other than the principal one in the spectra of nebulæ.

Detailed discussion of Photographs of the Spectrum of the Nebula in Orion, taken at Westgate.

Discussion of the Spectra of Stars in Orion.

Observations of Stars of Vogel's Class II.*a*.

Further Observations of the Spectra of Meteorites.

The Spectrum of Iron.

The Spectrum of Magnesium.

VI.—PERSONNEL.

Only two assistants are now employed as computers, namely, Messrs. Baxandall and Gregory, but Mr. Fowler, the Demonstrator of Astronomical Physics, also gives assistance in the Observatory work.

Mr. James, of Manchester, is retained as examiner of the computations in connexion with the reduction of the solar photographs.

Sergeant Kearney and Corporal Wood, of the Royal Engineers, are also employed in the work of the Committee.

J. NORMAN LOCKYER.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

REPORT to SOLAR PHYSICS COMMITTEE, by Professor J. NORMAN LOCKYER, F.R.S.

(*From November 18th*, 1890, *to May 8th*, 1891.)

I.—LABORATORY WORK.

a. *Solar-Metallic Comparisons.*

The absence of direct sunlight during the past winter has prevented many photographic comparisons being made of the solar spectrum and the spectra of metallic elements. The want of silver poles has similarly prevented the obtaining of comparison spectra of elements when respectively volatilised on silver and on carbon poles. Through the kindness of Prof. W. C. Roberts-Austen 786 grams of silver was received from the Royal Mint on February 18th. Since this date the following spectra have been photographed in the region extending from about K to G of the solar spectrum, that is, from about λ 3,900 to λ 4,300:—

Sun and Carbon-Pole Spectra.	Carbon-Pole and Silver-Pole Spectra.
Uranium.	Uranium.
Tungsten.	Tungsten.
Osmium.	Osmium.
Iridium.	Iridium.
Ruthenium.	Ruthenium.
Rhodium.	Rhodium.
Tantalum.	Tantalum.
Palladium.	Palladium.
Platinum.	Platinum.
Didymium.	Didymium.
	Bismuth.
	Gold.
	Thallium.

The same elements are now being photographed in the region extending from about G to F of the solar spectrum.

A few of the rare metals cannot easily be obtained in sufficient quantity to produce good arc-spectra. They are, vanadium, thorium, niobium, zirconium, lanthanum, yttrium, erbium, and gallium. These have, therefore, not yet been photographed on silver poles in any region. Some of the metals, *e.g.*, chromium, show practically the same number of lines whether volatilised on silver or on carbon poles. An attempt has been made to purify the chromic acid employed to give the spectrum of the former element, but the impurities are still apparent in the silver-pole photographs.

The following table shows the state of this work at the present time. The dots indicate the regions in which the lines present in the carbon-pole photographs, but absent in the silver-pole photographs, were struck out previous to the meeting of the Committee in November last, and the crosses show the progress that has been made since this date:—

—	3,900.	4,000.	4,100.	4,200.	4,300.	4,400.	4,500.	4,600.	4,700.	4,800.	4,900.	5,000.	5,100.	5,200.	5,300.	5,400.	5,500.	5,600.	5,700.	5,800.

Potassium - - -	·	·	·	·	·	·	·	·	·	·	×	·	·	·	·	·	×	×	×	×
Rubidium - - -	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·	×	·	·	·
Caesium - - -	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·	·

It will be seen from this list that 23 elements have had their carbon-pole spectra mapped from λ 3,900 to λ 5,900, and the impurities in them struck out by reference to their silver-pole spectra. Twelve other elements have been mapped and had their impurities eliminated between λ 3,900 and λ 4,200. Photographs will shortly be obtained of these elements between λ 4,200 and λ 5,900, and they will at once be treated in like manner.

The method of eliminating impurities which has been adopted in this work generally gives most satisfactory results. A comparison of the lines of manganese given in Watts' "Index of Spectra" with the lines exhibited by silver-pole photoghaphs, shows a remarkable agreement, both as to the number of lines and as to their intensity.

It is also noteworthy that a fairly strong line occurs in all the silver-pole photographs at the wave-length 3,982. This is not given by Watts in his list of lines of silver, although it is most probably due to this element.

b. *The Spectrum of Carbon.*

A new series of observations has been made of the spectrum of carbon with special reference to the modifications of the various groups of flutings under certain conditions of temperature and pressure. The variable position of the maximum luminosity of the group of five flutings extending from λ 4,736 to 4,678 has been abundantly confirmed. The maximum luminosity is shifted to λ 4,678 under certain conditions, but at the same time no decided change is noticed in either of the two groups of flutings in the green. Hence my former conclusion that the modifications of the citron band (λ 5,636) in cometary spectra are not simple modifications of the spectrum of carbon, but are produced by the addition of the spectra of other substances, is strengthened.

The observations of the blue band has special reference to the bright blue band seen in the spectra of planetary nebulæ and bright line stars.

II.—Observatory Work.

a. *Observations of Sun-spot Spectra.*

The sun has been observed on every available occasion, and, in spite of the extremely bad weather, 20 observations have been made of the most widened lines in spot-spectra. From November 18th to May 8th there have been 170 days, or, excluding 24 Sundays and 4 public holidays, 142 days. The following is a digest of the observatory note-book during this period:—

Days on which weather did not permit of observation - -	76
Days on which "No spots" was recorded - - - -	14
Days on which the spots were too small for spectroscopic observations - - - - - - - - -	17
Days on which spots were recorded, but the weather did not permit their spectra to be examined - - - - -	15
Days on which the spectra of spots were recorded - -	20
Total -	142

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

—	Weather wholly bad.	"No Spots" recorded.	Only small Spots seen.	Spots seen, but bad Weather prevented Observation of the Spectrum.	Observations of Spot Spectra.
November 18 - -	8	—	—	2	—
December - -	23	—	1	1	—
January - -	13	8	—	1	5
February - -	10	3	4	4	3
March - - -	8	3	5	4	3
April - - -	11	—	6	2	7
May 8 - - -	3	—	1	1	2
	76	14	17	15	20

The number of spot observations made in the six months covered by the last report was 8, as against 20 spot-spectra observed since November. This is accounted for by the fact that the minimum period has definitely passed. The observations have been made by Messrs. Baxandall and Gregory.

b. *Stellar Work at Kensington.*

Owing chiefly to the very bad weather during the past winter, very little progress has been made in the photographic study of stellar spectra. Particular attention has been given to the stars of the Rigel type, α Virginis and α Leonis have been found to be of this type. Several photographs have been taken of spectrum of γ Cassiopeiæ; all of these show bright hydrogen lines in addition to many dark lines. The dark lines in γ Cassiopeiæ have been found to be almost identical with those in the spectra of δ, ϵ, and ζ Orionis.

The photographs have been taken with the 10-inch object-glass prisms, but the driving clock is far from satisfactory for this method of work.

Since the date of the last report there have been 170 nights, or, excluding Sundays, 146.

Week nights on which the weather did not permit of work being done - - - - - - - - -	130
Sunday nights on which no work was done - - -	23
Number of week nights on which work was attempted -	16
Sunday nights on which work was attempted - - -	1

Preparations were made for the re-determination of the position of the chief line in the spectrum of the nebula in Orion by means of a grating spectroscope, but no favourable opportunity occurred.

A discussion of the relations of the spectrum of Arcturus and the sun is in progress. A magnificent photograph of the spectrum has been received from the Brothers Henry, and several have been taken at Kensington. In the region covered by the photographs so far obtained, the spectra closely resemble each other, but there are differences which appear to be due to the presence of carbon absorption flutings in the spectrum of Arcturus. Photographs extending as far as the carbon group more refrangible than K are required.

c. *Observations at Westgate-on-Sea.*

The work of differentiating the stars of Group III. from those of Group V. has been continued when circumstances permitted.

Photographs of the spectrum of the nebula in Orion were attempted on three occasions, but with little success, apparently owing to the fact that the mirror

required re-silvering. A new 30-inch mirror, with a shorter focus than the old one, has been made by Mr. Common for the Westgate telescope, and time has been necessarily lost by the exchanging of the mirrors and the shortening of the body.

III.—SUN PHOTOGRAPHS.

Indian photographs:

8-*inch pictures.*

Since November 18th 265 8-inch silver prints have been received from Dehra Dûn. The dates of these extend from September 11th, 1890, to March 10th, 1891. No photographs were taken at Dehra Dûn on the following dates owing to bad weather, and consequently gaps at these dates are left in the Indian record:—

1890.—September 16, 17, 18, 22, 23, 26; November 7, 25, 28, 29; December 11, 14, 16, 20, 24.

1891.—January 11, 16, 17, 22, 23, 24, 27; February 1, 2, 11, 16, 20, 25, 26, 27; March 6, 11.

The last parcel of Indian prints was received on April 28th, 1891. They are mounted as they arrive, and bound into volumes for convenience of reference.

270 8-inch negatives have also been received from Dehra Dûn.

12-*inch pictures.*

Only 8 12-inch negatives, and the corresponding silver prints, have been received from Dehra Dûn since the last meeting.

Mauritius photographs:

Since the last report was made 8-inch silver plates have been received from Mauritius for 106 separate days. From these the gaps in the Indian series are all filled up, with the exception of the following:—

1890.—September 18, 26; November 7; December 16.

1891.—January 22, 24, 27; February 25; March 11.

The last parcel of Mauritius prints was received on May 7th, 1891.

175 8-inch negatives have also been forwarded from Mauritius.

Kew Photographs.

2,814 4-inch negatives have been received from Kew. The dates of these extend from March 1858 to April 1872.

Greenwich Photographs.

169 duplicates of 8-inch negatives have been sent here for dates extending from January 1889 to December 31st, 1889.

IV.—REDUCTIONS OF SOLAR PHOTOGRAPHS.

The reductions of the Indian and Melbourne photographs for the years 1878–1881, with the Greenwich results for the same years interpolated, have been printed, but have not yet been passed for press.

V.—INSTRUMENTS.

All the instruments are in good working order. The 6-inch equatorial has been overhauled by Messrs. Troughton and Simms and a balancing weight added. The 10-inch equatorial has been improved by the addition of new supports for the finder, which allow it to be inclined so as to correct for the deviation of the object glass prisms. When a star is brought to the centre of th finder, its spectrum is visible in the telescope.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

Star Spectroscope.—A four-prism star spectroscope with automatic adjustment has been made by Mr. J. Hammersley. In order to reduce the weight, the more massive parts of the instrument have been made in aluminium. A bright-line micrometer, eye-piece, photographic camera, and comparison arrangements are provided. The instrument is specially intended for use with the new 3-foot reflector now in course of erection, the mirror for which has been made and presented to the department by Mr. Common.

Rowland Grating Spectroscope.—A new mounting with all the necessary adjustments for a Rowland grating has been made by Mr. Hammersley according to the drawings of Prof. Rowland's instrument (Phil. Mag., vol. 27, p. 369). The grating has not yet been received. The new instrument is to replace the one lent by Capt. Abney, which has been withdrawn.

VI.—PAPERS PUBLISHED, OR IN PREPARATION.

The following papers have been communicated to the Royal Society, but have not yet been published:—

"On the Causes which produce the phenomena of New Stars." Received December 1890. Read April 16, 1891.

"On the Chief Line in the Spectrum of the Nebulæ." Received December 18, 1890.

The following papers are almost ready for publication:—

"On the Spectra of the Wolf-Rayet Stars."

"Detailed discussion of the Photographic Spectrum of the Nebula in Orion."

"Further Observations of the Spectra of Meteorites."

Other papers in hand are as follows:—

Discussion of the Spectra of Stars in Orion.

Observations of Stars of Vogel's Class II.*a*.

The Spectrum of Iron.

The Spectrum of Magnesium.

The Classification of Stars of Group VI.

The Spectra of Nebulæ, being a discussion of lines other than the principal one.

When time permits, it is proposed to undertake the following work:—

(1.) Enlargements of spots shown on the Indian 12-inch pictures, with special reference to the study of the changes taking place in the same spot from day to day.

(2.) Photographic study of sun-spot spectra.

(3.) Observations of the position of the chief nebula line by means of a split grating (Proc. R. S., vol. 39, p. 416). By this method it is possible to observe both F and the chief line in the same field of view independently of the order of spectrum, or of the magnifying power employed.

VII.—PERSONNEL.

No change has taken place since the last meeting of the Committee. Messrs. Baxandall and Gregory are the computers, and Mr. Fowler also gives assistance. Sergeant Kearney and Corporal Wood assist in the photographic work.

The services of a labourer are becoming almost indispensable.

J. NORMAN LOCKYER.

REPORT to SOLAR PHYSICS COMMITTEE, by Professor J. NORMAN LOCKYER, F.R.S.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

(From May 9th to December 31st, 1891, inclusive.)

I.—LABORATORY WORK.

a. *Solar and Metallic Comparisons.*

During the past summer Sergeant Kearney has taken the following photographs of the arc-spectra of elements volatilised on silver and on carbon poles, and of carbon-pole spectra compared with the solar spectrum:—

COMPARISON SPECTRA ON SILVER AND CARBON POLES.

Regions photographed.	Elements.
K—G (λ 3,000—λ 4,300)	Indium, Lanthanum.
G—F (λ 4,300—λ 4,800) and also F—D (λ 4,800—λ 5,900)	Uranium, Tungsten, Osmium, Iridium, Ruthenium, Rhodium, Tantalum, Indium, Platinum, Palladium, Gold, Thallium, Didymium.
D—A (λ 5,900—λ 7,600)	Manganese, Cobalt, Nickel, Chromium.

CARBON-POLE SPECTRA COMPARED WITH SOLAR SPECTRUM.

K—G. Indium, Lanthanum.
G—F. Uranium, Tungsten, Iridium, Tantalum, Platinum, Palladium, Thallium.
F—D. Tantalum, Palladium, Thallium, Rubidium.
D—A. Iron, Cobalt, Chromium.

These photographs complete the arc spectra of 40 elements between K and D of the solar spectrum, both on silver and on carbon poles. This length of spectrum is taken in three sections, so that for each of the 40 elements there are 6 photographs, three being comparisons of silver- and carbon-pole spectra, and three comparisons of carbon-pole spectra with the solar spectrum, making altogether 240 plates. There are also 16 photographs of arc-spectra between D and A.

Vanadium has had its spectrum photographed between F and D, Erbium from G to F, Niobium and Lanthanum from K to F, but Thorium, Zirconium, Yttrium, and Gallium have not yet been obtained in sufficient quantity to produce good arc-spectra.

All the photographs have been examined and mapped, and the lines which are present in the carbon-pole spectra, but absent in silver-pole spectra, have been struck out. The progress that has been made in this direction since the meeting of the Committee in May is shown by crosses in the following table, and the work that had previously been done is indicated by dots. Chromium and Uranium have not been completed on account of the large number of lines present even in their silver-pole spectra. It is proposed to take other photographs in the required regions, using the purest materials in order to see whether these lines are mainly due to impurities or not.

Appendix L.
REPORT TO SOLAR PHYSICS COMMITTEE.

It will be seen that the work of mapping the lines and eliminating impurities is now practically completed between λ 3,900 and λ 5,900. The discussion of the spectra has, therefore, been commenced. Beginning with the spectrum of silver, it has been found that all the lines contained in Watts' "Index of Spectra" occur in the photographs. The positions of a few of the lines given by Watts appear to need correction, and three lines at λ 3982·0 4311·2, and 4616·5, are not given by him, although they are evidently due to silver. The photographs contain a large number of faint lines seen in the iron spectrum, even when the purest silver poles, kindly supplied by Prof. W. C. Roberts-Austen, have been employed.

The mapped spectra of metals of the iron group, Manganese, Cobalt, Nickel, and Chromium, are being similarly examined and discussed, the lines in each case being compared with those already tabulated. The spectrum of Cobalt, between λ 4,000 and λ 4,500, of Nickel between λ 4,000 and λ 4,400, and of Chromium between λ 4,000 and λ 4,200 seems not to have been recorded by any observer. The photographs exhibit several strong lines in these regions, the wave-lengths of which are being accurately determined to supplement the lists already published.

II.—OBSERVATORY WORK.

a. *Observations of Sun Spot Spectra.*

The sun has been observed whenever the weather permitted; and on 69 days the most widened lines in the spectra of spots have been recorded. From the date of the last report (May 8) to December 31 there have been 237 days, or excluding 34 Sundays and 4 public holidays, 199 days. The following is a digest of the Observatory note-book during this period:—

Days on which bad weather prevented observation -	74
Days on which attempts were made to observe spectra but bad weather prevented this being satisfactorily done -	44
Days on which the absence of spots on the sun was recorded	5
Days on which the spots were too small for spectroscopic observation - - - - - -	7
Days on which the spectra of spots were recorded - -	69
Total - - - - -	199

—	Weather wholly bad.	"No Spots" recorded.	Only small Spots seen.	Spots seen, but bad Weather prevented Observations of Spectrum.	Days on which Spot Spectra were observed.
May 9–31 - -	7	—	—	4	7
June - -	5	—	—	9	12
July - -	5	—	1	14	7
August - -	5	4	2	5	9
September - -	11	—	—	1	14
October - -	10	—	—	6	11
November - -	15	—	2	4	4
December - -	16	1	2	1	5
Totals - -	74	5	7	44	69

The number of spot observations made in the six months, covered by last report up to May 8, 1891, was 20, as against 69 observed in the time covered by the present report. The observations have been made by Messrs. Baxandall and Gregory.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

b. *Stellar Work at Kensington.*

Notwithstanding the recent unfavourable weather, considerable progress has been made in the photographic study of stellar spectra.

The work with the 10-inch prisms and the 10 inch O.G. has been temporarily suspended, as the long exposures necessary for the fainter stars were impracticable. The spectra of 22 stars have been photographed with this instrument, the total number of plates taken being 46.

The 6-inch Henry lens and 6-inch prism by Hilger are now being used, and the reduced dispersion enables the spectra of fainter stars to be photographed. A special investigation has been made of the variations in the spectrum of B Lyræ, in conjunction with Professor Pickering, to whom the results have been sent. A similar independent investigation has been commenced of the spectrum of γ Cassiopeiæ. In this case the variations, if any, appear to be of longer period than in β Lyræ. Altogether 12 photographs of β Lyræ have been obtained, and 25 of γ Cassiopiæ. In addition, photographs of the spectra of 51 other stars have been obtained, duplicates bringing the total number of photographs taken up to 204.

Edward's isochromatic plates have been used for the later photographs, and these enable a study to be made of the green part of the spectrum. This is particularly interesting in the case of such stars as α Orionis, which have banded spectra.

Many of the spectra so far photographed have been mapped, and the results will be discussed in due course.

The copies of the spectra which are exhibited at the meeting have been taken by moving the negatives backward and forward in the direction of the lines while the enlargement was being made.

The spectrum of Wolf's comet was observed by Mr. Fowler on October 28 It gave a dim continuous spectrum with feeble bands of carbon superposed.

From May 9th to December 31st there were 237 nights.

Nights on which work was done (including Sundays) -	62
Nights on which the weather prevented work being done -	175
Total - - -	237

Stars similar to those which were formerly believed to be special to the constellation Orion have been found in nearly all parts of the sky. Their spectra are characterised by very few lines, the hydrogen lines being no more prominent than some of the additional ones. Among them are α Virginis, α Leonis, α Andromedæ, α Pegasi, β Tauri, ζ Tauri, β Persei.

Stars with spectra similar to that of the sun are numerous. These have been mapped in a series in which the hydrogen lines vary inversely as the metallic lines.

The photographs of α Orionis are especially interesting, as they appear to support the statement that carbon radiation exists in the spectrum of this star. A photograph has been taken of the spectrum of Arcturus, extending from near D to a considerable distance below K. This seems to leave little doubt as to the intensification in this star of the absorption of the carbon fluting at γ 3,883.

c. *Work at Westgate-on-Sea.*

The new 30-inch mirror was not ready for work until September. Observations of nebulæ and star spectra have been continued, and photographs of the spectra of Capella and α Orionis have been taken with the new star spectroscope referred to in the last report. The definition of the photographs of the spectrum of α Orionis is excellent. A preliminary examination shows an intensification of the lines of calcium, chromium, and manganese, as compared with the same lines seen in the solar spectrum.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

III.—SUN PHOTOGRAPHS.

Indian Photographs :—

8-inch Pictures.

Since the last meeting of the Solar Physics Committee 343 8-inch silver prints have been received from Dehra Dun. The dates of these extend from March 14th, 1891, to November 4th, 1891.

No photographs could be taken at Dehra Dun on the following dates, on account of bad weather, and consequently gaps at these dates are left in the Indian record :—

1891.—March 12, 13; April 9, 12; May 24.
July 8, 12, 14, 16, 21, 22, 24, 25, 31.
August 4, 5, 6, 7, 12, 13, 14, 15, 21, 25, 26, 27, 28.
September 5, 6, 9, 12, 13, 17, 18, 23.
October 4, 22.

The last parcel of Indian prints was received on December 30th. They are being mounted and bound into volumes.

340 8-inch negatives have also been received from Dehra Dûn.

12-inch Pictures.

None.

Mauritius Photographs :—

Since the last report was made 8-inch silver prints have been received from Mauritius for 154 separate days. From these the gaps in the Indian series are filled up, with the exception of the following days :—

1890.—March 12; July 22; Sept. 17, 18, 23; Oct. 4, 22.

The last packet of Mauritius prints was received on November 17th.

217 8-inch negatives have also been forwarded from Mauritius.

IV.—REDUCTIONS OF SOLAR PHOTOGRAPHS.

The reductions of the Indian and Melbourne photographs for 1878–1881, with the Greenwich reductions interpolated, have been passed for press and will shortly be distributed. This completes the series of reductions originally undertaken by the Committee. For subsequent dates all reductions have been made at Greenwich. A discussion of the results is about to be commenced.

V.—INSTRUMENTS.

All the instruments are in good order. The driving clock of the 10-inch equatorial is now working fairly well. The regulator has been graduated, and the clock error necessary for giving the proper amount of trail to the star spectra can be readily adjusted. An electrical control for the driving clock would be a great advantage.

The mirrors of the siderostats have been re-silvered by Sergeant Kearney.

The Rowland grating ordered last year has not yet been received, owing to a break-down of the ruling apparatus.

The new 3-foot reflector, the mirror of which has been generously polished and silvered by Dr. Common, F.R.S., is rapidly approaching completion. The mirror and flat have been fixed in position, and already it is possible to make observations in which a driving clock is not essential.

A 6-inch prism of 45° refracting angle has been ordered from the Brothers Henry for use in the photographic study of stellar spectra. When this arrives it is proposed to use the present 6-inch prism (7½°) with the 6-inch Dallmeyer portrait lens. This will enable photographs to be taken of the spectra of fainter stars than those within reach of the present instruments.

A new mounting for the grating used in the observation of sun-spot spectra is in course of construction by Mr. Hammersley. It will be provided with two collimators, one of which will be used when the spectroscope is attached to the 6-inch equatorial, and the other when it is used with the 3-foot reflector for the observations of stars and nebulæ. The more solid parts are to be made of aluminium.

VI.—Papers Published and in Preparation.

The paper "On the Causes which produce the Phenomena of New Stars" has been distributed.

The paper "On the Chief Line in the Spectrum of the Nebulæ," read before the Royal Society in December 1890, has not been published.

A general paper on the "Photographic Study of the Spectra of Stars and "Nebulæ" is in hand, and will include some of the papers referred to in the previous report.

A paper on "The Arc Spectrum of Electrolytic Iron" is also nearly ready.

Other papers in hand are as follows:—

"The spectrum of magnesium."
"Further Observations of the Spectra of Meteorites."
"The Classification of the Stars of Group VI."
"The Spectra of the Wolf-Rayet Stars."
"The Spectra of Nebulæ, being a discussion of lines other than the "principal one."
"Detailed discussion of the Photographic Spectrum of the Orion Nebulæ."
"Observations of Stars of Vogel's Class II.a."

VII.—Personnel.

The Computers employed in the work of the Committee remain as at the date of the last report.

Messrs. Shackleton and Fournier, Research students in Astronomical Physics, assist in the Observatory work.

The attendant referred to in the last Report has been employed since July to assist in the evening work.

J. NORMAN LOCKYER.

Astro-Physical Laboratory.
January 7, 1892.

Report to Solar Physics Committee, by Professor J. Norman Lockyer, F.R.S.

(From January 1st to October 31st, 1892, inclusive.)

I.—Laboratory Work.

(a.) *Solar Metallic Comparisons.*

Owing to the pressure of other work, little progress has been made in the discussion of the photographs of metallic arc-spectra compared with the solar spectrum. The present state of this work is indicated in the following table. The dots indicate that the carbon-pole spectra alone have been mapped, while the crosses denote that the lines due to impurities have been eliminated by an inquiry into the corresponding silver-pole spectra.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

What has further been done is to endeavour to find lines not previously recorded, but which are undoubtedly due to the metals under consideration. This has been done by comparing the lines in the photographs, after impurities have been eliminated, with lines given in Watts' "Index of Spectra."

The spectra of the following elements have thus been inquired into throughout the region λ 3,900 to λ 5,900:—

Manganese.	Antimony.
Cobalt.	Bismuth.
Nickel.	Lithium.
Chromium.	Arsenic.
Calcium.	Silver.
Strontium.	Zinc.
Magnesium.	Platinum.
Copper.	Aluminium.
Lead.	Palladium.
Tin.	

(b.) *Comparisons of Sun-Spot Spectra with Long and Short Lines.*

The observations of sun-spot spectra are now being discussed with reference to the possible changes in temperature of those spots which have been observed several times. A special series of photographs of long and short line spectra is being taken for this inquiry.

As the region covered by the spot observations is from F to D isochromatic plates are of necessity employed.

II.—OBSERVATORY WORK.

(a.) *Observations of Sun-Spot Spectra.*

The Sun has been observed whenever the weather permitted, and on 99 days the most widened lines in the spectra of spots have been recorded. From the date of the last report (December 31, 1891) to October 31, there have been 305 days, or excluding 44 Sundays and 5 Public Holidays, 256 days. The following is a digest of the Observatory note book during this period:—

Days on which bad weather entirely prevented observations	115
Days on which attempts were made to observe spectra, but bad weather prevented this being satisfactorily done	35
Days on which the absence of spots on the Sun was recorded	0
Days on which the spots were too small for spectroscopic observations	7
Days on which the spectra of spots were recorded	99
Total	256

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

Month.	Bad Weather entirely prevented Observation.	"No Spots" was recorded.	"Small Spots" only were observed.	Spots observed, but Spectra not recorded owing to bad Weather.	Days on which Observations of Spot Spectra were made.
January - -	17	—	—	2	5
February - -	15	—	—	3	7
March - - -	13	—	—	3	11
April - - -	6	—	—	4	14
May - - -	8	—	—	4	14
June - - -	11	—	1	—	13
July - - -	7	—	2	5	11
August - - -	10	—	—	5	12
September - -	15	—	—	3	9
October - - -	13	—	4	6	3
Totals - -	115	—	7	35	99

The observations have been made by Messrs. Baxandall and Gregory.

(b.) *Photographs of Stellar Spectra.*

The 6-inch Henry object glass has been used on every possible occasion for this work. Up to the end of April the prism of 7½° was used with it, but since then the new prism of 45° referred to in the last report has been employed. The spectra obtained with the latter combination are 2 inches long from F to K, and the definition is almost perfect. Specimen photographs, enlarged 12 times, are submitted for inspection.

Since May the objective prism of 7½° has been used in conjunction with the 6-inch Dallmeyer portrait lens, and the spectra thus obtained being only 0·3 inches long from F to K, the exposures are proportionately reduced. The spectra of stars of the fifth magnitude can be easily photographed with this instrument.

The following tables show the spectra which have been photographed since the work was commenced two years ago.

(c.) *Nova Aurigæ.*

Immediately the presence of the Nova was announced in "The Times" (Feb. 3, 1892), photographs of its spectrum were commenced. Two successful negatives were taken on February 3, and others were attempted whenever possible. Altogether six good photographs were secured. Accounts of these have been published in the Proceedings of the Royal Society.

Several Photographs of the region of the Nova were taken with a 3½ inch Dallmeyer portrait lens, and eye observations were made with the 3-foot reflector.

(d.) *Number of Observing Nights.*

The state of the weather on the 305 nights from January 1st to October 31st inclusive is indicated in the following table :—

Month.	Satisfactory Results obtained.	Observations attempted, but Results unsatisfactory, chiefly on account of bad Weather.	Observers attended, but no Work could be attempted.	Nights wholly bad.
January - - - -	9	2	6	14
February - - - -	14	6	1	14
March - - - -	12	4	3	12
April - - - -	13	2	3	11
May - - - -	15	0	4	12
June - - - -	11	2	3	14
July - - - -	7	1	2	21
August - - - -	9	3	3	16
September - - -	13	2	0	15
October - - - -	13	0	2	16
Totals - - -	116	17	27	145

Observers present - - - 160 nights.

III.—SUN PHOTOGRAPHS.

Indian Photographs :—

8-*inch Pictures.*

During the present year 450 8-inch silver prints have been received from Dehra Dûn. The dates of these extend from November 5, 1891, to September 7, 1892.

No photographs could be taken at Dehra Dûn on the following dates, on account of bad weather, and consequently gaps at these dates are left in the Indian record:—

1892.—January 1, 20, 22, 27, 28.
February 4, 7, 12, 13, 14, 25.
March 1, 3; May 1, 13.
June 6, 12, 24, 25, 29.
July 8, 9, 14, 18, 19, 21, 22, 25, 26, 27, 28.
August 1, 3, 7, 8, 9, 10, 11, 14, 15, 16, 17, 19, 20, 23, 24, 27.
September 1, 2, 6.

The last parcel of Indian prints was received on November 3rd. They are being mounted and bound into volumes.

456 8-inch negatives have also been forwarded here from Dehra Dûn.

12-*inch Pictures.*

19 12-inch silver prints have arrived from Dehra Dûn, together with the negatives from which they were taken.

Mauritius Photographs:—

Since the last report was made 8-inch silver prints have been received from Mauritius for 280 separate days. From these the gaps in the Indian series are filled up with the exception of the following days:—

1892.—January 20.
February 12, 13, 14.
March 1, 3.
August 3, 7, 8, 9, 10, 11, 14, 15, 16, 17, 19, 20, 23, 24, 27.
September 1, 2, 6.

As the dates of the Mauritius prints already obtained extend only to August 1st, no doubt many of the above gaps in August and September will be filled up when the next batch of prints is forthcoming.

The last packet of Mauritius prints was received on September 28th.

308 8-inch negatives have also been forwarded from Mauritius.

IV.—Reductions of Solar Photographs.

The reductions of the Indian and Melbourne photographs for 1878–1881 with the Greenwich reductions interpolated have been distributed.

V.—Instruments.

All the instruments are in good order. The driving clock of the 10-inch refractor has been fitted with an inexpensive form of electrical control, which is a modification of that adopted by Mr. Russell, of the Sydney Observatory. Some form of control was found to be essential in connexion with the work on star spectra.

A grating spectroscope, made chiefly of aluminium, has been obtained for the solar observations, the great weight and deficiency of adjustments of the old one having rendered its use very difficult. The driving clock of the 3-foot reflector has been connected with the telescope, and the instrument is now ready for the work, though considerable difficulty has been experienced in balancing the instrument so that the clock will drive it in all positions.

As already stated, the 6-inch prism of 45° constructed by the Brothers Henry has been mounted in front of the 6-inch object glass and is now in constant use. The old prism of 7½° has been attached to the 6-inch Dallmeyer portrait lens, and the tube mounted in place of the tube of the Greenwich photoheliograph.

The Rowland grating is still on order.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

VI.—PAPERS PUBLISHED OR IN PREPARATION.

The following papers have been published in the Proceedings of the Royal Society :—

"On the New Star in Auriga, received February 4, 1892."
"Note on the Spectrum of the New Star in Auriga, received February 8, 1892. Addendum, received February 11, 1892."
"Note on the New Star in Auriga, February 25, 1892."

In preparation.—A paper "On the Photographic Spectra of the Brighter Stars" is in preparation. This consists of a discussion of 443 photographs of the spectra of 171 stars taken at Kensington.*

The paper on "The spectrum of Electrolytic Iron" has been completed, and will shortly be communicated to the Royal Society.

Other papers in hand are as follows :—

"The Spectrum of Magnesium."
"Further Observations of the Spectra of Meteorites."
"The Classification of the Stars of Group VI."
"The Spectra of the Wolf Rayet Stars."
"Detailed Discussion of the Photographic Spectra of the Orion Nebula."
"The Spectra of Nebulæ; being a discussion of Lines other than the principal one."
"Observations of Stars of Vogel's Class IIA."

VII.—PERSONNEL.

The two computors now employed by the Committee are Messrs. Baxandal. and Shackleton, Mr. Gregory having sent in his resignation on October 29 Mr. Shackleton was appointed on July 30, 1892.

The work on Stellar Spectra has been in charge of Mr. Fowler, Demonstrator of Astronomical Physics, and the research students in Astronomical Physics have also assisted.

J. NORMAN LOCKYER.

Astrophysical Laboratory, South Kensington,
November 11, 1892.

REPORT TO THE SOLAR PHYSICS COMMITTEE.

(*From November* 1*st*, 1892, *to May* 31*st*, 1893, *inclusive.*)

I.—LABORATORY WORK.

a. *Solar Metallic Comparisons.*

Owing to pressure of other work, this has not been touched, except in connexion with what is referred to in (b). Its present state is indicated in the following table. The dots indicate that the carbon-pole spectra alone have been mapped, while the crosses denote that the lines due to impurities have been eliminated by an inquiry into the corresponding silver-pole spectra.

---

* NOTE.—This has since been completed, and was communicated to the Royal Society on November 2.

b. *Paper on the Arc Spectrum of Electrolytic Iron.*

This paper was completed, and ready to be communicated to the Royal Society, some months ago. In the meantime, however, two valuable papers on the iron spectrum had been published.

Professors Kayser and Runge of the Hanover Technical High School, have investigated the arc spectrum of ordinary commercial iron between the wave-lengths 2,230 and 6,750 (on Rowland's scale) and compared their position with those given by Thalen, Cornu, and Vogel.

Another paper on the iron spectrum was recently communicated to the Royal Astronomical Society by Mr. F. McClean. In this case, however, the spark spectrum, and not the arc spectrum, was photographed in juxtaposition with the solar spectrum.

It was deemed advisable to institute a comparison between the lines in the Kensington photographs, those observed by Messrs. Kayser and Runge, and those photographed by Mr. McClean. Consequently the paper under notice was re-arranged, and new sets of tables constructed in which the lines given by Thalen, Messrs. Kayser and Runge, and those in the Kensington photographs were compared. Many of the lines recorded by Messrs. Kayser and Runge, and also some in McClean's photographs were evidently due to impurities, and as far as possible the origin of these lines has been traced from the Kensington maps of arc spectra.

An arrangement has been made with Mr. McClean by which copies of the tables will be sent to him for him to append any remarks arising from the discussion of his photographs.

II.—OBSERVATORY WORK.

a. *Observations of Sun spot Spectra.*

The sun has been observed whenever the weather permitted, and on 64 days the most widened lines in the spectra of spots have been recorded. From October 31st, 1892 to May 31st, 1893, there have been 212 days, or excluding 40 Sundays and 2 public holidays, 180 days. The following is a digest of the Observatory note book during this period :—

Days on which bad weather entirely prevented observations -	101
Days on which attempts were made to observe spectra, but bad weather prevented this being satisfactorily done - -	15
Days on which the absence of spots on the sun was recorded -	0
Days on which the spectra of spots were recorded - -	64
Total - - - - -	180

Month.	Bad Weather entirely prevented Observations.	"No Spots" was recorded.	Spots observed but Spectra not recorded owing to bad Weather.	Days on which Observations of of Spot Spectra were made.
November - - -	20	—	5	1
December - - -	22	—	3	2
January - - -	24	—	1	1
February - - -	15	—	2	8
March - - -	9	—	2	16
April - - -	3	—	1	21
May - - -	8	—	1	15
Totals - - -	101	—	15	64

The observations have been made by Messrs. Baxandall, North and Crabtree.

b. *Photographs of Stellar Spectra.*

Since the last meeting the instruments chiefly used have been the 6″ Henry object glass with prism of 45°, and the 7½° objective prism in conjunction with the 6-inch Dallmeyer portrait lens. The former was not available after the middle of March, as it formed part of the apparatus taken by the Eclipse party to the West Coast of Africa.

Mr. Shackleton having left Brazil on February 23, and Mr. Fowler also leaving for West Africa on March 18, the evening work at the Observatory was shortly after suspended, as the services of what remained of the astronomical staff were required during the day.

The following tables show the spectra which have been photographed since the end of October 1892:—

Stars photographed with 6-inch prism of 45° and 6-inch Henry Object Glass.

Name of Star.	No. of Photographs.	Name of Star.	No. of Photographs.
α Aquilæ	1	γ Leonis	1
α Andromedæ	2	α Orionis	1

γ Geminorum	1	λ „	1
η „	1	α Trianguli	1
μ „	1	β „	1
ζ „	1	γ Ursæ Minoris	1
α Leporis	1	ε Virginis	1

(c.) *Nova Aurigæ.*

At the beginning of February news was received that the Nova had brightened considerably. Several observations were made of its spectrum with the three prism Hilger spectroscope, but the only lines recorded were those at λ 5006 and λ 4956. Many attempts were also made to obtain a photograph of its spectrum with the 6″ Dallmeyer lens, and prism of 7½°, but as the Nova was only of the 9th magnitude, no satisfactory result was obtained.

(d.) *Comet Holmes.*

On November 8th, 1892, a telegram was received from Greenwich announcing the discovery of a bright comet in Andromeda, 70 seconds preceding Sturve 72. As soon as the weather permitted a photograph of the region of the comet was obtained. The impression of the comet on the plate was rather stronger than that of the nebula in Andromeda. Its spectrum was also observed by Mr. Fowler, and found to be mainly continuous with a possible maximum near λ 517. A photograph of the spectrum of the comet was also attempted, but it was much too faint to give a satisfactory result.

III.—Sun Photographs.

Indian Photographs:—

8-inch Pictures.

Since the last meeting of the Solar Physics Committee 283 8 inch silver prints have been received from Dehra Dûn. The dates of these extend from September 8th, 1892, to April 12th, 1893.

No photographs could be taken at Dehra Dûn on the following dates, on account of bad weather, and consequently gaps at these dates are left in the Indian record:—

1892.—September 10, 12, 13, 14, 17, 18, 23, 24, 25.
December 15, 16, 29, 30.
1893.—January 2, 3, 4, 12, 13, 15, 16, 17, 23, 24, 28.
February 4, 5, 6, 12, 13, 15, 16, 18, 19, 21, 22.
March 5, 6, 10, 11.

The last parcel of Indian prints was received on June 5th.

299 8-inch negatives have also been forwarded here from Dehra Dûn.

12-inch Pictures.

None.

Mauritius Photographs:—

Since the last report was made 8-inch silver prints have been received from Mauritius for 234 separate days. From these the gaps in the Indian series are filled up with the exception of the following days:—

1892.—August 23.
1893.—January 28.
March 6.

The last packet of Mauritius prints was received on June 5th.

325 8-inch negatives have also been forwarded from Mauritius.

IV.—The Total Solar Eclipse of April 16, 1893.

Arrangements for observing the eclipse was made by the Joint Committee of the Royal Society, the Solar Physics Committee, and the Royal Astronomical Society. Mr. Fowler and Mr. Shackleton were the observers sent out to represent the Solar Physics Committee, and consequently the output of work at South Kensington has not been so great. Mr. Fowler went to Fundium on the West Coast of Africa, and used the 6-inch objective prism and Henry lens mounted on an equatorial stand belonging to Professor

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

Lockyer. Mr. Shackleton took with him to Brazil a siderostat and laboratory spectroscope for similar work.

Mr. Fowler obtained 30 photographs, 6 before totality, 15 during totality, and 9 after.

Mr. Shackleton took 24 photographs, 2 before totality, 17 during totality, and 5 after.

Most of the photographs taken are excellent and are now being reduced.

V.—INSTRUMENTS.

All the instruments are in good order.

A slipping plate for the solar spectroscope has been purchased. A Jena glass prism, and a new star spectroscope designed specially for work with the 3-foot reflector have also been obtained.

The following instruments have been on loan to the Eclipse Committee:—

6-inch 45° prism, used by Mr. Fowler in West Africa.

Two siderostats and a large laboratory spectroscope for the Brazilian expedition.

A photoheliograph mounting for coronagraph used in West Africa.

VI.—PAPERS PUBLISHED OR IN PREPARATION.

The paper on "The Photographic Spectra of the Brighter Stars" was sent in to the Royal Society on November 3rd, 1892, read on December 8th, and is now in the press. It will shortly be published in the "Philosophical Transactions."

Other papers in hand are as follows:—

- "The Spectrum of Electrolytic Iron."
- "The Spectrum of Magnesium."
- "Further Observations on the Spectra of Meteorites."
- "The Classification of the Stars of Group VI".
- "The Spectra of the Wolf Rayet Stars."
- "Detailed Discussion of the Photographic Spectra of the Orion Nebula."
- "The Spectra of Nebulæ; being a Discussion of Lines other than the principal one."
- "Observations of the Stars of Vogel's Class IIA."

VII.—PERSONNEL.

The two computers now employed by the Committee are Messrs. Baxandall and Shackleton.

The work on Stellar Spectra has been in charge of Mr. Fowler, Demonstrator of Astronomical Physics, and the research students in Astronomical Physics have also assisted.

J. NORMAN LOCKYER.

To facilitate reference to the results in the present state of the research, photographic copies of the maps have been made on about half the scale of the originals.

(b.) *Proper Motion of Sun Spots.*

The proper motions of the most persistent spots in the years 1883 and 1889–90, respectively corresponding to a maximum and minimum period, have been considered with the object of ascertaining whether there was any definite relation between the amount of the proper motions of the spots and their positions on the sun's surface. Lists of spots were arranged in order of greatest motion in latitude and longitude, but the mean latitudes and longitudes corresponding to the amount of motion seemed to follow no regular law.

c. *Reduction of the Observations of Widened Lines.*

The tabulation of the widened lines which have been observed in sun-spot spectra, and the investigation of the origins of the lines has been continued from the eighth to the end of the 15th hundred. The origins have been determined by reference to the Kensington maps of arc spectra, and the tables are arranged to show the number of times each line has been widened in each hundred observations.

The latitudes of the spots, determined from the Greenwich photographic reductions, have been added in the seventh, eighth, and ninth hundreds. A discussion of the spectra in relation to latitude has been commenced.

d. *The Spectrum of Iron.*

The discussion of the photographic arc spectrum of electrolytic iron has been completed, and communicated to the Royal Society. The region 3,900–4,000 has been added, so that the region discussed extends from 3,900 to 6,560.

Photographs of the flame and spark spectra of iron have since been taken, and these have been reduced on the basis of the arc spectrum, with special reference to the variations in the intensities of the lines at the different temperatures. The region so far covered extends from 3,900 to 5,050.

It may be pointed out that a knowledge of the spectrum of iron is of the utmost importance in connexion with the solar and stellar researches now in hand.

e. *The Spectra of Meteorites.*

The completion of the tables of lines photographed in the arc spectrum of electrolytic iron enabled the reduction of the photographic arc spectra of the Nejed and Obernkirchen meteorites to be made. Tables have been prepared comparing the spectra of the two meteorites and showing the origins of the various lines seen in the photographs. The results have been communicated to the Royal Society.

The lines in the photographic arc spectrum of a mixture of various stony meteorites taken between Nejed poles have also been tabulated.

Further observations of the flame, glow, and spark spectra of various meteorites have been made, in connexion with the discussion of the spectra of meteorites at temperatures other than that of the electric arc.

f. *Spectra of Flames.*

Experiments have been made on the spectra of flames when the inner and outer cones are separated by the methods employed by Professor Smithells. Coal gas and cyanogen flames have been treated in this way, with a view of obtaining more light on the numerous photographs of the spectra of flames which have been taken at Kensington during the last 20 years.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

g. *Experiments in connexion with Eclipse Photographs.*

The photographs taken with the prismatic cameras during the eclipse of April 16th, 1893, show certain ill-defined rings which it was thought might be produced by the varying sensitiveness of the plate for different regions of the spectrum. Experiments have therefore been made with a ring slit spectroscope, with a luminous gas flame and daylight as sources of light.

The continuous spectrum in each case was apparently broken up into rings similar to those seen in the eclipse negatives.

II.—OBSERVATORY WORK.

(a.) *Observations of Sun Spot Spectra.*

The sun has been observed whenever the weather permitted, and on 106 days the most widened lines in the spectra of spots have been recorded. From June 1st, 1893, to March 31st, 1894 inclusive, there have been 304 days, or, excluding 43 Sundays and five public holidays, 256 days. The following is a digest of the Observatory note book during this period :—

Days on which bad weather entirely prevented observations	121
Days on which attempts were made to observe spectra, but bad weather prevented this being satisfactorily done	23
Days on which the absence of spots on the sun was recorded	0
Days on which there were spots on the sun, but too small for spectroscopic observations	6
Days on which the spectra of spots were recorded	106
Total	256

Month.	Bad Weather entirely prevented Observations.	"No Spots" was recorded.	Spots recorded, but too small for Spectrum Observations.	Spots observed, but Spectra not recorded owing to bad Weather.	Days on which Observations of Spot Spectra were made.
June	15	—	—	—	11
July	14	—	—	1	10
August	8	—	—	1	18
September	11	—	—	2	13
October	7	—	—	1	18
November	16	—	1	6	3
December	17	—	—	3	5
January	15	—	—	2	10
February	13	—	—	4	7
March	5	—	5	3	11
Totals	121	—	6	23	106

The observations have been made by Messrs. Baxandall, Shackleton, North and Crabtree.

On several occasions duplicate observations were made by different observers, and the widened lines recorded by each generally agreed very closely.

III.—EVENING WORK.

(a.) *Number of observing Nights.*

From May 31st, 1893, to July 5th, 1893, no evening work at the Observatory was possible, as the instruments used on the Eclipse Expedition were not re-mounted until the later date. The state of the weather on the 270 nights, or, excluding three public holidays, 267 nights, from July 5th, 1893, to March 31st, 1894 inclusive, is indicated in the following table:—

Month.	Satisfactory results obtained.	Observations attempted, but results unsatisfactory, chiefly on account of bad weather.	Observers attended, but no work could be attempted.	Nights wholly bad.
July (from 5th) - -	4	0	3	20
August - - -	14	2	4	10
September - - -	10	3	4	13
October - - -	7	7	2	15
November - - -	4	1	4	21
December - - -	11	1	1	16
January - - -	4	2	2	23
February - - -	8	0	2	18
March - - -	9	3	4	15
Totals - - -	71	19	26	151

Observers present 116 nights.

(b.) *Photographs of Stellar Spectra.*

The 6-inch telescope with the prism of 45° was mounted on its return from the Eclipse Expedition, and has since been in constant use.

β Lyræ.—A special investigation of the spectrum of β Lyræ has been made, and a larger number of photographs have been taken. The light changes of the star occupy a period of 12 days 22 hours, and there is a similar period for the spectroscopic changes. The exposures required in this case are from an hour to an hour and a half.

γ Cassiopeiæ.—Early observations of the spectrum of this star seemed to suggest a variation in the visibility of the bright lines which are seen in its spectrum. Fourteen additional photographs of its spectrum have been taken during the last nine months, making 43 altogether. These are now being reduced.

Altair.—The spectrum of this star is very similar to that of Procyon, with the difference that the metallic lines are somewhat diffused. Several photographs of its spectrum have been taken in order to détermine any possible changes in the sharpness of the lines.

Ultra-violet spectra.—In the case of some of the brighter stars, specially long exposures have been given in order to photograph the ultra-violet region. Five of these have been reduced.

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

The following table shews the spectra which have been photographed since the end of May 1893 :—

Stars photographed with 6-inch prism of 45° and 6-inch Henry Object Glass.

Name of Star.	No. of Photographs.	Name of Star.	No. of Photographs.
α Aquilæ - -	9	α Hydræ - -	2
β Arietis - -	1	β Leonis - -	1
α Aurigæ - -	3	δ " - -	1
β " - -	1	α Lyræ - - -	3
α Bootis - -	1	β " - - -	41
ε " - -	1	γ " - - -	3
α Canis Majoris -	2	α Orionis - -	2
α Canis Minoris -	1	β " - -	3
β Cassiopeiæ - -	1	γ " - -	4
γ " - -	14	ζ " - -	4
α Cephei - -	1	κ " - -	1
δ " - -	3	σ " - -	1
α Ceti - - -	1	α Pegasi - -	2
α Coronæ - -	2	γ " - -	1
α Cygni - -	2	ε " - -	1
γ " - -	1	β Persei - -	2
ε " - -	1	α Piscis Australis -	3
γ Draconis - -	1	γ Tauri - -	1
α Geminorum - -	1	η " - -	1
β " - -	1	ζ " - -	2
γ " - -	1	λ " - -	1
μ " - -	1	α Ursæ Majoris -	1
ζ " - -	5	ζ " " -	2
η " - -	1	α Virginis - -	1

It will be seen that only a small number of stars have been photographed in addition to those recorded in previous reports. This is because the great majority of the stars within reach of the present instrument have now been photographed. With only three exceptions, the 56 stars down to magnitude 2·5 which reach a sufficient altitude have been photographed with exposures varying from 15 minutes to an hour. It is only by very long exposures, ranging from one to two hours, that the spectra of stars fainter than this can be taken at all, and even then only white stars can be dealt with, and the negatives are never equal to those of the brighter stars, owing to the multiplied effects of atmospheric tremors. The work is therefore now almost limited to a few special stars requiring continued study, though when these are not available, attempts are made to extend the present series of photographs to stars below magnitude 2·5. Up to the present time the spectra of 20 such stars have been photographed with this instrument. The recent discussion of the spectra of 171 of the brighter stars included spectra photographed with the prism of 7½°, first with the Henry object glass, and afterwards with the Dallmeyer portrait lens, but the dispersion of these instruments is inadequate for the detailed inquiries which have now become necessary.

With reference to the suggestion made at the last meeting of the Committee that a 9-inch instrument be purchased for the extension of this work

Appendix L.
REPORT TO SOLAR PHYSICS COMMITTEE.

to the fainter stars, with a dispersion not less than that of the present instrument, the state of affairs is as follows :—

No. of available stars down to mag. 2·5	=	56
No. photographed	=	53
No. of available stars between mags. 2·5 and 3·5	=	104
No. photographed	=	12
No. of available stars between mags. 3·5 and 4·5	=	288
No. photographed	=	8

With an instrument capable of photographing the spectra of stars down to mag. 4·5 there would not only be a saving of time for the brighter stars, but something like 400 additional stars would be open to investigation.

(c.) *Eye Observations.*

Mira.—With the 3-foot reflector several observations have been made of the spectrum of Mira Ceti, which reached a maximum about the end of February, special attention being given to the appearances of carbon flutings and hydrogen lines.

White Stars.—The spectra of Bellatrix, Sirius, and other stars have been observed with reference to the absorption lines in the orange.

Comet Rordame-Quenissett.—On July 12th, 1893, a telegram was received from Kiel, giving the position of a newly-discovered comet. The weather was unfavourable until July 16th, when it was seen with a small telescope, but its position was inaccessible to the large telescopes, and no photograph was possible. It was observed again on the 17th of July, from the balcony of the College, with a 6-inch telescope, when it had developed a slight tail.

Spectrum observations made by Mr. Shackleton showed the flutings of carbon which are so frequently seen in the spectrum of comets.

No further observations were possible after July 17th on account of bad weather.

IV.—SUN PHOTOGRAPHS.

Indian Photographs :—

8-inch Pictures.

Since the last meeting of the Solar Physics Committee 370 8-inch silver prints have been received from Dehra Dûn. The dates of these extend from April 13th, 1893, to January 24th, 1894.

No photographs could be taken at Dehra Dûn on the following dates, on account of bad weather, and consequently gaps at these dates are left in the Indian record :—

1893.—May 2, 30, 31.
June 1, 20, 21, 22, 24, 27, 29, 30.
July 1, 3, 4, 5, 9, 10, 13, 14, 15, 17, 19, 23, 31.
August 1, 2, 3, 4, 6, 8, 9. 19, 26, 27, 28, 31.
September 3, 4, 5, 10, 12, 16, 18, 19.
October 4, 17.
November 19, 20.
December 25, 30, 31.

1894.—January 1, 18, 19, 20, 21, 22.

The last parcel of Indian prints was received on April 4th, 1894.

378 8-inch negatives have also been forvarded here from Dehra Dûn.

12-inch Pictures.

None.

Mauritius Photographs :—

Since the last report was made 170 8-inch silver prints have been received from Mauritius. The dates of these extend from April 14th, 1893 to October 31st,

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

1893. From these the gaps in the Indian series are filled up with the exception of the following days :—

1893.—June 24.
July 3.

The last parcel of Mauritius prints was received on January 10th, 1894, and as these only extend to October 31st, 1893, the vacant dates in the Indian series in November, December, and January will probably be filled up when the next batch arrives.

203 8-inch negatives have also been forwarded from Mauritius.

V.—THE TOTAL SOLAR ECLIPSE OF APRIL 16, 1893

The spectrum photographs taken with the prismatic cameras in West Africa and Brazil have been partially reduced, and the reductions will be continued as other work permits. It seems probable that these results will have an important bearing upon various problems of Solar Physics, especially in relation to the stellar researches on which we are now employed.

A preliminary report on the results has been prepared and sent in to the Joint Eclipse Committee.

VI.—INSTRUMENTS.

All the instruments are in satisfactory condition.

After many difficulties the 3-foot reflector has been made to work very well. It is now in fair adjustment throughout, and has already been employed for work which is beyond the reach of the 10-inch refractor. At the present time, however, the mirror requires re-silvering.

All the instruments which were employed in the observations of the eclipse of last April have been remounted.

A new camera for experimental work on the photography of solar prominences, and a hand arc lamp for spectroscopic work have been provided.

VII.—PAPERS PUBLISHED OR IN PREPARATION.

The paper on "The Photographic Spectra of the Brighter Stars" has been published in the "Philosophical Transactions."

The paper on "The Arc Spectrum of Electrolytic Iron" has been completed and was sent in to the Royal Society on October 27th, 1893, read on November 16th, 1893. It is now in the press and will shortly be published in the "Philosophical Transactions."

A paper on "The Arc Spectrum of Iron Meteorites" was sent in to the Royal Society on December 22nd, 1893, read February 15th, 1894.

A "Preliminary Report on the results obtained with the prismatic cameras during the Total Eclipse of April 16, 1893," was sent in on January 11, 1894.

Other papers in hand are as follows:—

- "The Spectrum of Magnesium."
- "Further Observations on the Spectra of Meteorites."
- "The Classification of the Stars of Group VI."
- "The Spectra of the Wolf Rayet Stars."
- "Detailed Discussion of the Photographic Spectra of the Orion Nebula."
- "The Spectra of Nebulæ; being a Discussion of Lines other than the principal one."
- "Observations of the Stars of Vogel's Class IIA."
- "The Variable Spectrum of β Lyræ."
- "The Spectrum of γ Cassiopeiæ."
- "The Total Solar Eclipse of April 16, 1893."
- "The Spectrum of o Ceti."

Appendix L.

REPORT TO SOLAR PHYSICS COMMITTEE.

VII.—PERSONNEL.

The computers employed in the work of the Committee remain as at the date of the last report.

Messrs. Butler and Wardale, Teachers in training in Astronomical Physics, assist in the Observatory work.

J. NORMAN LOCKYER.

Astro-Physical Laboratory,
South Kensington, April 11th, 1894.

LONDON: Printed by EYRE and SPOTTISWOODE,
Printers to the Queen's most Excellent Majesty.
For Her Majesty's Stationery Office.

SUPPLEMENT

TO

FORTY-FIRST REPORT

OF THE

DEPARTMENT OF SCIENCE AND ART

OF THE

COMMITTEE OF COUNCIL ON EDUCATION.

DRAWING AND MANUAL INSTRUCTION IN ELEMENTARY SCHOOLS, DURING THE YEAR ENDED 31st AUGUST 1893.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY EYRE AND SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, East Harding Street, Fleet Street, E.C., and
32, Abingdon Street, Westminster, S.W.; or
JOHN MENZIES & Co., 12, Hanover Street, Edinburgh, and
90, West Nile Street, Glasgow; or
HODGES FIGGIS, & Co., Limited, 104, Grafton Street, Dublin.

1894.

[C.—7337.-i.]

The annual publications of the Department consist of—

(1.) The Directory, or Code of rules, for establishing and conducting Science and Art Schools and Classes. Price of 1894 issue, 6*d.*

(2.) The Calendar, History, and General Summary of Regulations, which gives a history and general description of the Department, with a summary of the rules and a list of the Science and Art Schools and Classes, &c. Price of 1894 issue, 2*s.* 3*d.*

(3.) The Annual Report, which gives full information as to the operations of the Department during the past year. Price of 1894 issue, 1*s.* 9*d.*

(4.) Drawing and Manual Instruction in Elementary Schools. Supplement to the Annual Report, giving the details with regard to Drawing and Manual Instruction in Elementary Schools during the past year. Price of present issue (covering year ended 31 August 1893), 1*s.* 6*d.*

(5.) Abstract of Returns furnished to the Department as to the Application of Funds, under the Local Taxation (Customs and Excise) Act, 1890, and the Technical Instruction Acts, &c., for the purposes of Science, Art, Technical, and Manual Instruction in England, Wales, and Scotland. Price of 1893 issue, 8½*d.*
